## GENERAL DESCRIPTION OF THE THOMASON COLLEGE

---

THE Thomason College is a provincial institution maintained and controlled by the Government of the United Provinces but students are admitted under certain conditions, from the Central Provinces Central India, Rajputana and Burma the Governments of these Provinces paying the cost of training their students. A few students are admitted annually from certain Indian States under special conditions. Every candidate for entrance is required to produce certain educational and other certificates before he is permitted to appear in the annual competitive entrance examination of his class. The competition is keen. Candidates are not admitted from the provinces of Bengal, Bombay Madras, or Punjab, as these provinces have their own engineering colleges. Full details of the conditions of admission to the Thomason College appear in the circulars of the various classes. These circulars are obtainable from the College on prepayment of 9 pies stamps for postage, and are included in this calendar.

The Thomason College now admits successful and fully qualified candidates to the following classes

- (a) Civil Engineer Class
- (b) Overseer Class
- (c) Draftsman Class

The Course of Study in the College for each of these classes is given in the Course of Study and Syllabus pamphlet of the class. These pamphlets are obtainable, on payment from the College Book Depot and are included in this calendar. The Civil Engineer Class course is of three years' duration,

and candidates for it must not be under 17 or above 25 years of age on 1st June immediately preceding the competitive entrance examination, which is held annually in June. The Overseer Class course is of two years' duration and the age limits in this case are 16 and 25 years under the same conditions. The Draftsman Class course is usually of three years' duration and candidates for this class must not be under 15 or above 21 years of age on 1st June immediately preceding the entrance examination. The qualifying educational standard for the entrance examination of the Draftsman Class is much lower than for the other classes and the entrance examination standard also is lower.

The Civil Engineer Class course approximates to the degree standard in engineering of a British university. The Thomason College grants a diploma on the successful completion of the course. The first year of the course is devoted to Applied Mathematics, Surveying and Drawing, Science and Elementary Civil and Mechanical Engineering, the second year to advanced Mathematics, Theory of Structures, Surveying and Civil, Mechanical and Electrical Engineering, and the third year to mainly Civil Engineering, its designs and projects and to Mechanical and Electrical Engineering. An important test of a student's practical ability takes place in the third year, in which, after the preliminary projects, which are set, corrected and criticized by internal examiners, a two months' engineering project is set by an outside examiner. The third year students go into camp for the first portion of this project period and each student works alone across country with his own instruments (theodolite, level and plane table) and his gang of men returning to Roorkee when he has finished his work in the field to complete his report, designs, calculations, estimates and survey plates. This test, which carries a large number of marks, effectually

eliminate the pure theorist from the upper half of the class, and brings to the fore the man of common sense, ability character and initiative. The project work is preceded by the final examination which for this class takes place in the last week of March. The Overseer Class students also execute at the end of second year a small project in Roorkee to test their practical skill and application of principles which they learn during their two years course. This project is also preceded by the final examination which for this class takes place in the last week of April.

For other classes sessional examinations are held in June before the end of each College Session also mid sessional examination for all classes are held by the first week of February each year. Every student is required to obtain a certain qualifying standard (see pages 148 and 186) for promotion to the next class. The college session usually begins on 16th October and usually ends on 15th July. Each session is followed by a long vacation of three months during the unhealthy monsoon period when outdoor work would be impossible. During each session, the College closes for ten days at Christmas.

According to the total number of marks obtained details of which are given on pages 148 and 186 the following awards are made to students who successfully complete the College course

Civil Engineer class students	}	An Honours or Ordinary Diploma
Overseer class students		A Higher or Ordinary Certificate
Draftsman class students		Certificate as Draftsman
		If qualified in estimating a remark to that effect will be given in the certificate

A successful Civil Engineer class student is usually posted as an unpaid apprentice to the Public Works department in the

Province of his domicile for one year to learn practical methods of work and the control of labour

Overseer class students of United Provinces domicile are offered unpaid apprenticeships in the Public Works Department. At the end of the year of apprenticeship, appointments to the Subordinate Engineering Service of the United Provinces depend on vacancies.

An employment register is maintained for the benefit of those students who do not obtain employment or are out of employment.

The probable current monthly expenses of a student are shown at end of the circular of each class. A number of scholarships are awarded in the Civil Engineer Class, Overseer Class and Draftsman Class.

The Thomason College main building is large and spacious. It has laboratories, class-rooms and model rooms for the various departments. The equipment of instruments and apparatus is complete and as up to date as funds permit. The College Workshops are also well fitted with machinery and apparatus. The College has its own Dairy, Hospital, Book Depot, Meteorological Observatory and an electrical supply system giving current for electric lights, fans and motors in all buildings. The drinking water is pumped direct from tube wells into overhead reservoirs. All the pumps are operated electrically. The Civil Engineer Class and Overseer Class students and some of the Draftsman Class students live in Hostels grouped in the rear of the College. Each student of the Civil Engineer class has a furnished room and bathroom. The Civil Engineer Class students have both a club and a common mess. To join the former is compulsory and to join the latter is optional. Most of the staff have detached bungalows with

gardens. A plan of the College and a map of the estate appear at the end of this calendar. Many facilities for recreation are provided for the students. There are a number of tennis courts, squash racquets courts, football and hockey grounds, a cricket ground and a large boat club on the Ganges Canal with rowing and sculling boats. The students are encouraged to take part in all games and sports in order to fit them for their profession and also for their own benefit. Athletic Sports and a Regatta are held annually and all Civil Engineer Class students are now enrolled in the Indian Auxiliary Force or the University Training Corps for military training, while the Overseer Class students perform physical drill under a military instructor. Physical drill is compulsory for all students.

## HISTORY OF THE THOMASON COLLEGE

---

The Thomason College the oldest engineering college in India owes its birth to the waters of Mother Ganges. Without the River Ganges there would have been no canal of that name and, without the canal, no college at Roorkee. The Ganges Canal soon reached maturity, but its offspring, the Thomason College, planned by men of wisdom and foresight, grew steadily from the smallest beginnings till it attained the proud position which it now holds as one of the leading educational institutions of the East with great traditions and a reputation second to none.

The establishment of an engineering college at Roorkee was suggested to the Honourable James Thomason, Lieut.-Governor of the North West Province, about 1846, by Colonel Cautley of the Bengal Engineers, who had been Superintendent General of Canals since 1836 and was busily engaged in the scheme, first contemplated by Colonel Colvin of the same Corps, for the employment of the waters of the Ganges for irrigation. While there is no doubt that the immediate requirements of the Ganges Canal in engineer officers and subordinates were chiefly responsible for the foundation of the Thomason College, it is probable that broader issues also influenced the minds of Mr Thomason and his advisers and that an important point was the necessity for some systematic training for Civil Engineers in India, or at least in Northern India. The Western Jumna Canals were commenced in 1817 and the Eastern Jumna Canal in 1822. In 1847 the annual expenditure on establishment for these undertakings was Rs 1 04 000 and on annual repairs

Rs. 30 000 In Dehra Dun, Rohilkhand and near Delhi works for drainage and irrigation were maintained requiring skilful superintendence The roads from Jubbulpur to Mirzapur the grand trunk roads from Calcutta to Delhi and from Agra to Bombay and the Land Revenue Settlement Survey had been completed It was apparent that there existed a large demand for skill in every branch of Civil Engineering To meet this demand there were officers of the Army European non commissioned officers and soldiers and Indians To make these men efficient agents, the well educated Europeans lately arrived in the country required instruction in Indian languages and in the peculiarities of materials and construction in India The European soldiers required scientific instruction and the Indians from their local experience and ability to bear exposure to the climate were likely to prove efficient instruments if they were well taught and inspired with a proper sense of responsibility

As early as the year 1845 Lieutenant Baird Smith of the Bengal Engineers then Superintendent of the Eastern Jumna Canal began training young Indians at Saharanpur in Civil Engineering for the grade of Sub Assistant Executive Engineer and in 1846 twenty candidates were admitted to this class In 1847 after the First Punjab War, Lord Hardinge the Governor General determined on the vigorous prosecution of the Ganges Canal scheme This undertaking, especially in the first few miles of its course, was beset with great engineering difficulties Evidently it would tax to the utmost the skill industry and resources of the people and country The science that was necessary to construct a work of this magnitude would also be kept constantly in exercise for its maintenance improvement and extension Immediate measures were necessary to provide a constant supply of well trained and experienced Engineers Out of this emergency, the Roorkee College arose later to be known as the Thomason College

The circumstances which caused the selection of Roorkee as the site for the College were thus stated in the proposal made to the Governor-General on September 23, 1847 :

The establishments now forming at Roorkee, near the Solani Aqueduct on the Ganges Canal, afford peculiar facilities for instructing Civil Engineers. There are large workshops and most important structures in course of formation. There are also a library and a model room. Above all, a number of scientific and experienced officers are constantly assembled on the spot or occasionally resorting thither. These officers, however, all have their appropriate and engrossing duties to perform and cannot give time for that careful and systematic instruction which is necessary for the formation of an expert Civil Engineer. On these accounts the Lieutenant Governor would propose the establishment at Roorkee of an institution for the education of Civil Engineers which should be under the direction of the Local Government in the Education department."

The proposal obtained the immediate and cordial support of the Governor General in India. On October 19, 1847, Lieutenant R. Maclagan of the Engineers\* was appointed Principal of the College and on November 25 of the same year a prospectus was issued, the establishment being fixed at 1 Principal, a Headmaster, an Architectural Drawing Master and two Indian Teachers. The prospectus provided for three departments in the College. The First Department was for candidates for appointment as Sub-Assistant Civil Engineers. It was laid down that they must be under 22 years of age, must be able to read and write English easily and must have a knowledge of Geometry, Algebra, Mensuration, Plane and Spherical Trigonometry, Conic Sections, and Mechanics. The number to be admitted was 8 annually. The Second Department was for European Non commissioned Officers and

---

\*Father of Sir Edward Maclagan 1st Baronet Governor of the Punjab

soldiers who had to pass an elementary test in Reading Writing, simple Drawing and very easy Mathematics before admission. The number of admissions was limited to 10 annually. These soldiers were trained to become Overseers in the Public Works Department. The Third Department was for young Indians desiring free instruction in Surveying, Levelling and Drawing. These men were required to have some knowledge of Arithmetic and to be able to read and write Urdu. Admissions were limited to 16 annually and qualified men were given certificates on leaving the College. Annual examinations were held for all classes. It will be noticed that the lengths of the courses were not specified, but it is believed that the Second Department course lasted 6 months only.

When Lieutenant R. MacLagan was appointed Principal in October 1847 not only were there no students, but there was no College. The first students were admitted on January 1 1848 by the transfer of a few young Indians who were being instructed by Major W. E. Baker of the Bengal Engineers then Director of the Ganges Canal. These men apparently joined the Third Department. By August 1848, ten non-commissioned officers and soldiers had joined the Second Department, which was then complete, but meanwhile, as no building was available, work was carried on in tents. A very small building, the forerunner of the present Thomason College, was built for use during the hot weather of 1848 and was demolished later, when better accommodation was provided in the new College buildings. This little building contained two classrooms ( $26' \times 32'$ ), a Principal's Office  $20 \times 23$ , a hall of the same size and four small verandah corner rooms ( $16' \times 12'$ ) for the Headmaster, Drawing Master, Book Depot, and Store, with verandahs on all sides. A plan of this miniature College—known then as the Roorkee College—hangs in the Thomason College corridor. The site of the building is unknown, but

presumably it was near the site of the existing College, possibly where the Principal's residence now stands. Instructional work was interrupted, in the winter of 1848-49, by the Second Punjab War, when Lieutenant MacLagan and the military students were absent on service for about two months, or, as it was tersely put, 'Marched for 'the frontier'.

The year 1848 was an important one in the history of Roorkee. In this year, 12 years after the first line of the Ganges Canal levels had been taken, Lord Hardinge then Governor-General, recommended the commencement of work on the Canal scheme with the utmost vigour and the Ganges Canal may be said to originate from that time. The Canal Foundry Workshops were also established at Roorkee by Major Allen of the Bengal Army in that year and students of the Roorkee College attended there for practical instruction. In 1850, the number of Military students admitted to the College was increased to 15 annually and on April 7, 1851, there were 50 students of all classes. Forty-two men had already passed out.

The year 1851 really marks the birth of the Thomason College as it now is. At the end of the Second Punjab War, the Roorkee College, with its then existing establishment and accommodation was barely adequate for the instruction of the students and was utterly inadequate to meet the exigencies of the occasion. Mr Thomason at once grasped the situation and prepared a scheme for enlargement.

This scheme provided for —

- 1st—The admission of officers, both of the Royal and East India Company's armies, to study at Roorkee in a class called the Senior Department.
- 2nd—The superintendence and improvement of the village schools around Roorkee as feeders for the Third or Indian Department of the College.

3rd—The establishment, in connexion with the College, of a Depot for Mathematical and Scientific instruments and of a workshop for their repair and manufacture

4th—The formation of a Museum of Economic Geology

5th—The erection of an Observatory for instruction.

6th—The maintenance of metal and stone printing presses with a book binder's establishment and all the necessaries for the publication of scientific works with appropriate drawings and illustrations.

7th—The enlargement of the College buildings and establishment to meet all these purposes

8th—The doubling of the number of students in the Second and Third Departments

The original cost of the College buildings, etc., was estimated at Rs 1,56 217 and the annual charge for the College at Rs 83,898

A valuable record of the origin of the Thomason College and the aims and objects for which it was established, is to be found in a pamphlet, dated October 3, 1851, drawn up by Mr Thomason, Lieutenant-Governor of the North-West Provinces. The exact date of the commencement of the construction of the new College—afterwards called the Thomason College—is unknown, but it seems that the work must have been started in 1852. The officer who designed the main building was Lieutenant Price of the 1st Fusiliers, then employed on the Ganges Canal, who later became Chief Engineer, Hyderabad. There is reason to believe that Lieutenant Price also supervised the work of construction, *vide* Frontispiece, Volume III, of Colonel Cantley's Report on the Ganges Canal. It is very remarkable that a junior Infantry Officer should have been capable of designing and building so large an edifice

as the Thomason College and producing an example of Renaissance architecture which seems to be not displeasing even to the eyes of professional architects, who have visited Roorkee in modern times. The officers responsible for the selection and acquisition of the site for the Thomason College and its estate showed wonderful judgment and foresight. They acquired in time 365 acres of land including the high ground on which the College itself was built facing the north, in which direction the main range of the Himalayas towers in snowy grandeur above the nearer hills and lesser ranges. The land was fertile, the water supply ample and the locality healthy, while, within a mile or two some of the greatest engineering works in the world were in the process of construction. It is recorded that the construction of the College was nearing completion in 1854 and that all the original buildings including the main building were completed in January, 1856 so that a period of about four years was required for the work. The front of the main building, viewed from the north was as it is at the present day except that there was no clock but there were no rooms where the present Library and Convocation Hall exist—only covered passages—and the rear of the quadrangle was open except for a small model room and museum block in the centre. As time went on the College was enlarged. By 1873 the Library and Convocation Hall had been built and by 1896 the rear of the College had been closed by providing rooms for Science Departments while still later a second storey was added over the south east corner to accommodate the Photo, School of the College Press. Nevertheless it can be said that the Thomason College was completed as then required, in January 1856, though the site had not the beautiful trees which now provide welcome shade around its lawns and gardens.

Until the year 1854 the institution at Roorkee continued to be known as the 'Roorkee College,' but in that year the

Honourable Court of Directors instituted a scholarship to be called the Thomason Scholarship, in memory of Mr Thomason and the Governor General ordered the Roorkee College to be called the "Thomason College of Civil Engineering" in the following notification

No 6  
OUR GOVERNOR GENERAL OF INDIA  
IN COUNCIL

PUBLIC DEPARTMENT,  
London February 6 1851

- 1 We entirely concur in the opinion you express that it becomes the Government of India to institute some enduring memorial of the eminent merits and services of Mr Thomason and we think that the object cannot be accomplished in a more appropriate manner than by connecting it with the

Letter, dated November 4 No 60 of 1853 submitting for Court's sanction a proposal for the foundation of a scholarship or prize at the Roorkee College in memory of the late Mr Thomason

College of Civil Engineering at Roorkee

- 2 We approve the proposal you have submitted to us and authorize you to carry it out in such a way as may seem to you most suitable. At the same time we are of the opinion that the opportunity should be taken of marking our sense of Mr Thomason's public services and of connecting his memory with Roorkee College in a still more emphatic manner. It appears to us very fitting that an institution of such peculiar importance to India and of a character so entirely novel in that country should bear the name of its founder and it is accordingly our desire that *the College be henceforth designated the Thomason College of Civil Engineering at Roorkee*

- 3 We direct that this change of name and the reasons for it be publicly notified in such form as you deem most suitable

We are etc  
(Sd) RUSSELL ELLICE  
J OLIPHANT  
and other Directors

In 1856, when the Thomson College had been built, a Committee was appointed by the Lieut Governor to inquire into the past working and present condition of the College and to prepare a scheme for its extension to meet the demands of the Services. The recommendations of this Committee, most of which were approved in November, 1857, were not put into force at that time owing to the disorganization caused by the Indian Mutiny, but the more important alterations were carried out during the next year or two. These were as follows —

1 A fixed date was introduced for admission to the Senior Department (Commissioned Officers) and the number for this department was fixed at 16

2 First Department — The non stipendiary students were now styled the *English Class* and their number fixed at 10. A general educational test was prescribed in addition to the mathematical test at the entrance examination. The stipendiary students were termed the *Native Class* and an entrance test similar to that for the English Class was exacted. Students of the First and Senior departments were eligible for appointment as Probationary Assistant Engineers.

3 Second Department — *Military Class* — The number of students was fixed at 30. The course however, was only for one year against two in the other departments.

*Non Military Class* — No alterations were proposed for this Class, but Indian students were now admitted.

4 Third Department — *Vernacular* — Various alterations in the syllabus and the requirement of a knowledge of English were prescribed for this department.

5 An evening class for Indian workmen in Drawing, Geometry and Estimating was started.

6 A Professor of Surveying was added to the staff, who was made Curator of the Instrument Depot, also a Professor of Practical Chemistry and Photography.

7 A College Museum was started, with models from England

8 An Observatory was sanctioned

9 A Gymnasium was sanctioned but was not provided till later

10 A soldiers' garden and the grounds generally were laid out and improved

11 The Press was reorganized and enlarged

12 The young officers and non commissioned officers and privates of the Sappers, stationed at Roorkee were required to attend the College as far as their duties would admit

Colonel R MacLagan R E , the first Principal, retired in 1860, being succeeded by Captain E C S Williams, R E , who, in turn was succeeded by Major J G Medley, R E , in 1863 The latter held the post of Principal till 1870 For a few years there were no great changes but the College was expanding steadily In 1863, when the number of students had risen to 88, a Professor of Experimental Science was appointed In 1864, the College was affiliated (nominally) to the Calcutta University The course for the Senior and First Departments was extended to three years, unless a higher certificate was gained in two years Eight students were guaranteed appointments as Assistant Engineers and practically all officers from the Senior Department obtained employment Second Department students still remained only one year in the College and passed into the Public Works Department, Military students as 1st Grade, English Civilians as 1st or 2nd Grade and Indians as 3rd Grade In 1866, a Mistry Class was formed and also an Officers' Surveying Class for a 7 months' course in Military Surveying, Drawing and Field Engineering In 1868, an Indian Military Class (3rd Department) joined the College for a 2 years' course The names of the various classes were altered in 1870 by which time there were 231 students The Senior Department became the

"*Engineer Class*" (Military and Civil), while the Second Department became the "*Upper Subordinate Class*," and the Third Department the "*Lower Subordinate Class*." By 1870, the Staff had greatly increased and consisted of a Principal, two Assistant Principals, a Professor of Experimental Science and a Professor of Drawing. These officers were assisted by a staff of masters for the Upper Subordinate Class under a Head Master and another staff for the Lower Subordinate Class. The increase in the number of students and in the strength of the staff, between the years 1863 and 1870 was remarkable. By 1870, the Thomason College had become a large and important institution, but very few Indians of good education entered it; indeed, between 1847 and 1873 only 17 Indians passed out from the Engineer Class or its equivalent, the remainder being Europeans.

Major A. M. Lang, R. E. replaced Colonel J. G. Medley, R. E., as Principal in 1871, and in the following year the Upper Subordinate Class course—up to then lasting one year only—was extended to two years. In 1873, the Central Instrument Dépôt, located in the College, was transferred to the Canal Foundry and Workshops and a new Class for instruction of men of the Guides Corps in Surveying and Drawing was started. About the year 1873, it became apparent that at last the more highly educated Indians had begun to realize the advantages of the Engineer Class, in which they could obtain an excellent education *gratis* with the chance of a provision for life in a well paid and honorable profession. This is shown by the fact that, between 1873 and 1875, sixteen Indians passed out of the Civil Engineer Class.

The history of the College, since its establishment, may be said to be divided into four periods and the year 1875 marked the close of the first period. The chief characteristic of this period was the pecuniary aid given by the Government to most students in the way of stipends. It

in an untrodden country and Government had to bear the cost of the journey. But it was also a period of great industrial development and of great activity in the construction of rail ways, canals, roads and other aids to industrial enterprise. The public mind was opening to the benefits of public works and to the advantages of Engineering as a profession. The result was that in 1875 Government found it possible to restrict the financial help previously given to students and to limit the number of guaranteed appointments to the Public Service. The years 1875 to 1896 may be termed the second period. During these years, though the pecuniary aid given to students was to a large extent done away with, most of them paid practically nothing for their education. The training, however, was confined chiefly to Civil Engineering, Surveying and allied branches and technical or industrial classes did not exist. The years 1896 to 1920 may be called the third period when all students except soldiers, paid fees, and the College was developed greatly as a Technical Institute, much stress being laid on Industries and Science. From the year 1920 to modern times may be considered as the fourth period when the College reverted once more to the specialized training of Civil Engineers and subordinates, relinquishing Industrial and Mechanical and Electrical classes, which were found to interfere with the more advanced training in Civil Engineering necessitated by modern conditions and were unsatisfactory in a non-Industrial centre such as Roorkee.

The Royal Indian Engineering College at Cooper's Hill in England, which opened in 1871 and closed in 1906, had an unfortunate effect on the entry of students to the Engineer Class at Roorkee after 1876. While 55 admissions to this class were made in 1876, only twenty were made in 1878, but the effect of Cooper's Hill College decreased later when more Indians appeared as candidates for entry. An entrance examination fee of Rs. 20 was required for the first time in 1876.

In 1878, Major A M Brandreth, R E , succeeded Colonel A M Lang, R E , as Principal. In 1881 the Guides Corps Class was thrown open to the whole Indian Army and was called the Native Military Survey Class. In this year also, for the first time, marks were allotted for physical fitness and for proficiency in athletics. From the commencement of 1882 the entire financial responsibility for the College was thrown on the Local Government. Under orders of the Secretary of State no Europeans except Royal Engineers were to be appointed as engineers in India, except under his sanction, it being understood that Cooper's Hill College was to be the source whence they were to be recruited. Indians of pure Asiatic descent were to be given all vacancies in the Public Works Department irrespective of the position they held after the final examination. European competitors only receiving, under special sanction appointments for which Indians were unable to qualify. This provision was altered in 1886 when guaranteed appointments were thrown open to all Statutory Natives of India. The Professorship of Experimental Science was abolished and considerable reductions made in the staff, due probably to an anticipated permanent reduction in the number of Engineer Class students.

Few events of importance seem to have occurred in the Thomason College between the years 1882 and 1894 except the abolition of the Military Section of the Lower Subordinate Class in 1885 the starting of a British Military Survey Class in 1888 and some changes in the Staff. Colonel A M Brandreth R E , retired in 1891 being succeeded as Principal by Colonel F D M Brown, V C of the Indian Staff Corps, but the latter officer vacated in 1892 when Major J Clibborn became Principal. The year 1894 however, is notable for the fact that in that year the last men for many years passed out of the Engineer Class into the Imperial Service. The Provincial Service was formed and the

Thomason College having been a provincial institution since 1882, all men from the Engineer Class entered the Provincial Service from 1894. This must have affected the entry to the College. In 1895, educational qualifying tests were introduced for permission to sit for the entrance examinations.

In 1896 commenced the third period in the history of the College. The Lieutenant Governor of the North-West Provinces visited the institution. The College was reorganized and from this time forward all students, except soldiers, paid fees for their education. This further extension of the commercial principle, far from injuriously affecting the College, added to its efficiency and activity. The number of applicants for admission exceeded the number who could be accommodated and it became necessary to insist on a process of selection, whereby only those who stood highest in the competitive examination could be admitted. From this time forth the College did not alone concern itself with the education of engineers and their subordinates: its scope was extended so as to include Industrial and Technical education generally, the aim being to develop the College into a Technical Institute for the Provinces, which should control, stimulate and inspire technical teaching of all kinds.

The main points of this reorganization were:

*Firstly*—*The transfer of the administration of the College from the control of the Public Works Department to that of the Education Department*—thus emphasizing the fact that the College was not only intended as a nursery for the Public Works Department, but also to supply the need for Technical education for the Provinces in general.

*Secondly*—*The extension of the course of students in the Engineer Class from two to three years, in addition to an apprentice year in the Public Works Department as Engineer students before they were appointed Assistant Engineers.* These, however, were not the only points of interest in the

reorganization scheme. An era of great activity and expansion was inaugurated. A Committee of Management was appointed and the College was affiliated to the Allahabad University. The first revised entrance examination, applicable to both English and Indian students, was held. A class was formed for Mechanical Apprentices having a three year practical course in the Workshops combined with theoretical education. An Industrial Class was started, this had also a three-year course, divided into 15 sections including Press work, Lithography, Photo Mechanical Processes and Art Handicrafts. Students could take up one or more of these sections according to their capabilities. The affiliation to the Allahabad University, though nominally effected was never actually completed and in time it died a natural death as did the affiliation to Calcutta University in 1861. It is evident that the development of the College into a Technical Institute was started with the greatest vigour under the control of the Education Department. The Thomason College became an educational institute under that Department and all important matters had to be referred to the Committee of Management, which became later the Advisory Council. In 1896 a clock was presented by H. E. Sir Bir Shumsher Jung, K. C. S. I., at a cost of Rs. 2,500 and placed on the College dome.

The next few years showed the progress of the College as a Technical Institute. The Technical and Scientific side was greatly strengthened while the Civil Engineering side seems to have remained as before. In 1897 two Professors, two Instructors and a Demonstrator were appointed to the Staff, viz. a Professor of Mathematics (Mr. Tipple) and of Experimental Science (Mr. Sedgwick), an Instructor in Applied Science, a Technical Instructor and a Laboratory Demonstrator. A Chemical Laboratory was started. New Technical Workshops were sanctioned. In 1899 an Electrical Engineering Class was started. In 1901 the new Techni

equipped with the latest machinery run by electricity, were built at a cost of Rs 33,000. The Applied Science Laboratories were fully equipped. A Physical and Mechanical Laboratory was provided. The College Press was enlarged and remodelled and an electrically operated water supply system for the whole College was installed. Before the completion of all these alterations and additions which were necessary to carry out the details of the reorganization scheme of 1896, Colonel J. Chibhorn, C I E, I S C went on furlough pending retirement in 1901 and his duties as Principal were taken over by Captain E. H. deV. Atkinson, R E, who remained Principal from 1903 to 1915 when he left the College (as Lieut. Colonel Atkinson C I E, R E) to proceed on active service during the Great War. A Council was created in 1901 to assist the Principal in regulating the courses of study and other matters which were recognized as outside the province of the Committee of Management. A sub-committee of this Council now called the *Board of Studies*, still performs these duties though the Council itself has ceased to exist. The enlargement of the Thomason College between the years 1896 and 1900 may be judged by the facts that the number of classes increased from 8 to 25, the number of students from 185 to 324, the fees from Rs 4,121 to Rs 16,784 and yet the yearly cost of the entire management fell from Rs 1,48,261 to Rs 1,32,064. These facts were pointed out by Sir A. P. MacDonnell, Lieutenant Governor, in a speech delivered at Roorkee on November 6, 1900, when he added that it was the object of Government to develop the Thomason College into a Technical Institute for the North West Provinces and Oudh, which should control, stimulate and inspire technical teaching of all kinds. Experience, however, showed later that advanced technical instruction was not easy at Roorkee and could not be given there except at the expense of higher civil engineering instruction. The

Thomason College, with its 25 classes, was becoming very complicated though such expansion may have been expedient under the industrial and technical conditions then obtaining

Captain Atkinson R E, in 1902, set about the reorganization of the interior economy of the College. Fortnightly examinations—a trial both to the staff and students—were abolished. The session was for the first time divided into three terms and the examinations grouped together at the end of each term. A new time-table was introduced and the allotment of marks re arranged. The length of each attendance, which had so far been invariably 3 hours was changed to 1½ hours, except for certain subjects such as Laboratory work and Drawing. The arrangement of the staff was altered. The branch of study was placed under a Professor with assistants who were responsible for the teaching of that branch throughout the College. A Dairy was started in connexion with the College stores which had been founded by the staff and students. In July the College was visited by the Lieutenant Governor, Sir Digges LaTouche and as a result of his inspection, a number of much needed buildings were sanctioned. In the early part of 1903 most of these buildings were completed. They included a building for the stores and dairy, a bazar, a central power house, improvements to the quarters, new latrines, the completion of the system of drainage and a house for the Applied Science Instructor. A grant of Rs 24 000 was sanctioned, to be spread over four years, for bringing the supply of surveying instruments in the College up to date. In 1904, further improvements in interior economy were made. The syllabuses for all the classes were revised and brought up to date. The list of text books in use was revised and recent and more approved methods of instruction in Geometry and Mechanics introduced. A start was made to equip a Mechanical Laboratory for the practical teaching of Mechanics. Instead of specified text books for

the Entrance examination of the Civil Engineer Class, a brief Syllabus was prepared for each subject and published in the Circulars. A Survey Class for Indian Officers of the Imperial Service Troops was held for the first time. The Mechanical Apprentice Class which was started in 1896, was placed on a more practical basis, an entrance examination introduced, and the course altered to three years at College and two years as Indentured Apprentices in outside workshops. The rules for the Draughtsman and Computer Class were altered and an examination in Drawing was held for men who had passed the Lower Subordinate Class Entrance examination but failed to obtain vacancies. Mr P. P. Philips Ph.D., joined the staff as Instructor in Chemistry in 1904. The College Press was reorganized, the Typographic branch being reduced and the Lithographic branch developed. The terms of admission to the Industrial Apprentice Class were altered, the payment of scholarships in special cases being substituted for stipends. The College had indeed entered upon an era of strenuous reorganization and expansion.

On April 8, 1905, H. E. the Viceroy, Lord Curzon, inspected the Thomason College and on March 7, 1906 the College was greatly honoured by a brief visit from Her Royal Highness, the Princess of Wales (now Her Majesty Queen Mary), who afterwards presented portraits of H. R. H. the Prince of Wales and herself to the College. The Lieutenant Governor—Sir J. J. D. LaTouche—visited the College during 1905. A Professor of Surveying and Drawing and a Demonstrator in Chemistry were added to the staff in 1905 and Mr A. M. McLean joined the staff as an Instructor in Mechanical Engineering in 1906. In the year 1907, a large scheme for the further development of the College as a Technical Institute was sanctioned. The Lieutenant Governor at that time—Sir John Hewett—was greatly interested in industrial and technical education. An electric light, fan and

telephone system was installed in the College main building, the Workshops and the Principal's residence. New engines of ample power were laid down. A Technical Class was started and the Mechanical Apprentice Class enlarged. To meet these increases additional hostel accommodation was built, the workshops doubled in size, new classrooms built, additional staff entertained, a new water supply inaugurated and last but not least new laboratories for the College sanctioned at a cost of Rs 91 000. In the following year (1908), the buildings sanctioned in the expansion scheme were practically finished and the new engines and water works installed. An Automobile Driver Class was started and good progress was made at first in training drivers. The Calcott Reilly Memorial Fund from the late Cooper's Hill College was handed over to the College to be given for Applied Mechanics in the Civil Engineer Class. Mr C J Veale joined the College Staff in 1908 as Professor of Surveying and Drawing. The new accommodation for the Photo-Mechanical Department (the College Press) was completed in 1909 and in this year the late expansion of the Professorial staff necessitated a scheme to provide new and better staff bungalows. A site in the vicinity of Malikpur village was acquired and the village removed to Khanjarpur. Mr P P Phillips who was appointed on five years' contract was taken into the Indian Educational Service. In October 1909 His Honour the Lieutenant Governor, Sir John Hewett visited the College and opened the new laboratories, additions to workshops and the electrical and power installations and a new double storeyed hostel. A sub-committee of the College Council was formed into a *Board of Studies* to advise on all matters connected with courses, examinations and time tables. In 1910 the Technical Class was abolished and arrangements made to form a Department of Technology. Major H B D Campbell, R E (Assistant Military Principal), left the College in which he

had served since 1897 and was replaced by Captain E W C Sandes, R E , who joined as Professor of Civil Engineering on the abolition of the post of Assistant Military Principal. Mr H P Jordan also joined as Professor of Mechanical Engineering. An elaborate educational plant of cotton machinery was installed in the College workshops, with an expert instructor in charge of the Cotton Class. Five houses were built in 1910 and 1911 for College professors on the Malikpur estate, though not taken into use till late in 1912. A Department of Technology was formed on revised lines to consist of (1) a Higher Division, (2) a Lower Division (Mechanical Apprentice Class), (3) an Automobile Driver Class. Marks, throughout the College, were rearranged and few papers were valued at less than 100 marks. Special grants were assigned for survey equipment and Workshops equipment.

A large Textile Department building was built in the Workshops enclosure in 1911 and 1912. All the cotton machinery was erected in it. This is the building—now outside the Workshops enclosure—which was converted later for use by the Overseer Class and staff as classrooms and offices and known as the Overseer Class Annexe. The Automobile Driver Class was transferred to Lucknow. This transfer marked the beginning of the gradual diminution of all Technical and Industrial classes in the Thomason College and its reversion from a Technical Institute into a purely civil engineering institution as it is today. In 1913 nine Anglo Indian students joined the Textile (Cotton Spinning and Weaving) Class, but the Class *did not seem to be a success*. After a few years admissions it ceased at Roorkee and later the cotton machinery was transferred elsewhere. In 1914 admissions to the higher division of the Department of Technology at Roorkee ceased, and the lower division (the Mechanical Apprentice Class) was transferred to Lucknow, so that both

these classes soon ceased to exist in the College. These changes marked a further step in the reversion of the College to a civil engineering institution though, in 1914, a Mechanical and Electrical Engineer Class was started and was maintained for a time. In 1913 the Public Services Commission, under Lord Lington, visited the College. There were no other events of much importance in the College in the years 1913 and 1914. The institution developed gradually in different ways, but in a calm and peaceful atmosphere rudely broken in August, 1914, by the world wide catastrophe of the declaration of War.

When the Great War commenced the College was in vacation, but in October 1914, when it re-opened, great enthusiasm and patriotism were shown by the staff and students who subscribed Rs 2 500 towards the Imperial Relief Fund and followed daily the progress of the war on maps hung in the College corridor. Mr B M Mukerjee, Professor of Physics volunteered in 1914 for service in the X Ray section of the General Hospital and left for active service in the Western theatre, not returning until 1920. Captain E W C Sandes, R E, proceeded on active service to Mesopotamia in March, 1915. The Principal Lieut Col E H deV. Atkinson, C I E, R E, proceeded to England in July, 1915, where he was appointed C R E of a Division and rose to be *Chief Engineer of the 4th Army on the Western Front* before the end of the war with the rank of Major General and many decorations. Mr B F Tipple officiated as Principal till October, 1916, in his absence. Mr H P Jordan, Professor of Mechanical Engineering, and Mr A M McLean, Instructor in the same Department, obtained commissions in the Indian Army Reserve of Officers and left for military service in May, 1915 and August 1915, respectively, Mr Jordan returning invalided, in October, 1915, and Mr (now Major) McLean, M C, in 1920 after service in Mesopotamia and staff

employment in India. Mr E S Griffith, an Instructor, obtained an I A R O commission in May, 1917 and Mr G Lacey, who joined the College as Professor of Civil Engineering in November, 1915, also obtained a commission in 1917 and both left the College. Many European students, who had passed out of the College, received commissions, and the names of those students killed in the War appear on a brass memorial tablet in the College. It is evident that the War took a heavy toll of the College Staff and instruction became increasingly difficult. Funds were also scarce, so that any large expansions had to be postponed till better times. Nevertheless the instructional work continued. The Public Works Department assisted the College by recommending the appointment as Principal of Mr W Gunnell Wood, C S I, late Chief Engineer, Buildings and Roads Branch, United Provinces and this appointment was made in October, 1916. Sir James Meston, Lieut Governor, visited the College in February, 1916.

The Public Works Reorganization Committee visited the Thomason College in 1917 and in July of that year His Honour, the Lieut Governor of the United Provinces, Sir James Meston presided at the Annual Convocation. The Indian Defence Force came into existence, replacing the Mussoorie Volunteer Rifles, and all British subjects in the College were enrolled in the new formation. Admissions to the Textile Class ceased in 1918, but the class was not transferred finally to Cawnpore till January, 1920. The declaration of the Armistice was duly celebrated in November, 1918 and the College settled down to consolidate its position in the difficult times which succeeded the War, when political unrest in certain districts and lack of funds for new schemes, rendered the task of Government no easy one. Mr E F Tipple, Professor of Mathematics, vacated his post in April, 1919, after

22 years service at the College during which he twice officiated as Principal. In February 1920 Major L W C Sandes D S O , M C , R E , rejoined the College Staff from leave after the War as a Professor of Civil Engineering and subsequently officiated as Principal for several months during the absence on leave of Mr W G Wood C S I . During 1920 and 1921 the College suffered heavily through the deaths of Mr F W Sedgwick Professor of Electrical Engineering and Physics who had served on the College Staff for 23 years and Sub-Conductor G E Lansley Personal Assistant to the Principal, on March 22 1920 and October 6 1921 respectively. Mr W L Stampe I S E was appointed as a second Professor of Civil Engineering in November 1920 and Mr J M Salisbury Trelawny as a third Professor in October 1921. There were many changes in the superior staff at this time due to the altered conditions after the close of the War and the retirement of officers who had carried on the work ably during the War.

It is not proposed in this history to deal with changes of staff other than professorial staff except in unique cases and as regards professors merely to mention the times of their first appointments and dates on which they vacated their posts finally. Officiating appointments and those owing to leave vacancies are too numerous and would make the history unwieldy. Reference to the Annual Report at the end of the Calendar of any year will show in detail the changes in the staff during that year. For easy reference a list of Principals follows this History in the Calendar and also a list of Convocation Presidents i.e., officers who presided at the Annual Convocations and Prize givings. A further list of very distinguished visitors is added. Many other senior officials have also visited and continue to visit the College, the Annual Report of each year shows their names and, needless to say, the College welcomes such indications of their interest in it.

A complete Reorganization Scheme for the Staff of the Thomason College, dated July 12, 1919, was drawn up in that year by the Committee of Management of the College to suit the new requirements of Government under the Reforms Scheme and the new policy laid down for the future of the College and it was duly submitted to the Secretary of State. The scheme was necessitated by the proposal to close down certain classes in the College as mentioned hereafter. The Committee of Management proposed certain modifications of the original scheme in May, 1920 and final sanction to the amended scheme was accorded by the Secretary of State on January 29, 1922. After 1920, admissions to the Upper Subordinate Lower Subordinate, Industrial Apprentice and Mechanical and Electrical Engineer Classes ceased. It had been decided finally that the training of Mechanical and Electrical specialist students and Industrial and Technical students was not suited to Roorkee and this decision marked the end of the scheme to develop the Thomason College as a Technical Institute. The cessation of recruitment to the Upper and Lower Subordinate Classes and the consequent disappearance of the last students of these classes in July, 1922, was brought about by changes in the organization of the Public Works Department under which many subdivisions were to be in the charge of Assistant Engineers (Provincial Service) instead of Upper Subordinates. This scheme made it advisable to train sub-overseers to a standard higher than the Lower Subordinate Class recruits for the new Subordinate Engineering Service. Hence, when the Upper Subordinate and Lower Subordinate Classes were to be abolished in the College, a scheme was prepared to replace them by a new Overseer Class of intermediate standard. The new Overseer Class was approved and the first students were admitted in October, 1922, for a 3 years' course, 40 vacancies being offered annually for com-

petition This 3 years' course was later reduced to 2 years. The former Lower Subordinate Class Staff was transferred to the Overseer Class, but later the instruction was supervised and assisted also by the Lecturers of the Civil Engineer Class. It was originally intended that the Overseer Class should be located at Roorkee only until buildings were ready at Lucknow to accommodate it. The last students of the Mechanical and Electrical Engineer Class and the Industrial Apprentice Class passed out of the College in July, 1923, but a class for Draftsmen was retained and still exists. A batch of 20 Military students was admitted to the College in January 1922, as a special case to meet the requirements of the Military Engineer Services (old M W S) for a short course of training approximating to that of the abolished Upper Subordinate Class with due regard to the shorter duration. This batch left the College in July, 1923. A second batch of ten Military students only was admitted in October 1922 and passed out in July, 1924 and with that batch the class ceased to exist in the Thomason College and all College students up to July, 1935 have been civilians. Since October, 1935 3 Indian Military Academy Gentlemen Cadets are to be admitted to the Civil Engineer class annually after they have passed the entrance examination to undergo a course of post graduate training corresponding to that of Cambridge with a view to their obtaining Commissions in the Indian Engineers.

In the year 1921 the College Committee of Management was replaced by an *Advisory Council*, constituted under G. O. No. 1573/XV—312, dated July 10, 1920. The last meeting of the Committee of Management (45th) was held on July 9 1920 and the first meeting of the Advisory Council on February 17, 1921. The Council was formed with 10 members as compared with 7 members constituting the Committee, but the number of members in the Council has since increased the status of the Thomason College was

improved owing to the Government of India offering to the Civil Engineer Class 10 or 9 vacancies in alternate years, in the Indian Service of Engineers as *guaranteed appointments*. This step by which employment in the Imperial Service was again thrown open to highly qualified students, was a return to the practice in vogue up to 1894, when students could pass into that Service. The constitution of the Indian Defence Force was changed in 1921 to the Auxiliary Force (India) and the College detachment (Europeans) became a part of the Muscorie Battalion being organized as a Machine Gun Section. An increased accommodation for professors was required one detached bungalow almost opposite the Royal Engineers' Mess was replaced by a pukka building in 1920 and in 1921 the construction of a pukka bungalow was commenced opposite the Royal Engineers' Mess and another further east. In October 1921, Mr W G Wood C S I vacated the post of Principal and was succeeded by Major E W C Sandes D S O , M C , R E.

His Excellency the Governor of the United Provinces Sir Harcourt Butler, K C S I C I E presided at the College Convocation and Prize giving in July 1922. In this year a Committee was appointed by Government to inspect the College Press with a view to possible economies through the transfer of the control of the Press to the Superintendent of the Government Press, Allahabad (then Mr Abely). Though the Committee recommended the transfer, the Advisory Council was averse to it and Government accepted the opinion of the Council. The two new bungalows for professors were completed in 1922 and funds were given for the transfer of the Textile (Cotton) Machinery to Cawnpore and the conversion of the Textile Building into an Annex for the Overseer Class instruction. The benefits of the sanctioned Reorganization Scheme were felt in this year. All members of the instructional staff were allowed rent free quarters from October

1922 and salaries were improved. Mr H P Jordan Professor of Mechanical Engineering, then on leave was transferred to the Ikon Engineering College in October 1922. Mr Dhillon, Mr Raja Ram, Mr B D Puri, and Mr Shiv Narayan joined the Staff as Professors of Civil Engineering (Railways), Civil Engineering (Sanitary), Mathematics and Electrical Engineering and Physics respectively, also Mr Chuckerbutty as Assistant Professor of Surveying and Drawing. But Mr Shiv Narayan and Mr Chuckerbutty were transferred elsewhere after one session and the posts remained vacant and Mr Dhillon also left in October 1923.

His Excellency Sir William Marris K C S I K C I E who succeeded Sir Harcourt Butler as Governor presided at the Convocation in July 1923. This occasion was unique in that the Governor of the Punjab His Excellency Sir Edward Maclagan K C S I C I I was also present and distributed the prizes at the request of Sir William Marris. Sir Edward Maclagan had been invited in view of his connexion with the College through his father Colonel R Maclagan R E who was the first Principal. A portrait of Colonel Maclagan presented by His Excellency Sir Edward Maclagan in commemoration of his visit hangs in the Convocation Hall. Mr C J Veale Professor of Surveying and Drawing officiated as Principal for a period of six months in 1923 (including the College vacation) in the absence of Major Sandes. In November 1923 sanction was given to the formation of an Platoon of the 3rd (Allahabad) Battalion of the University Training Corps (Indian Territorial Force) at Roorkee thus enabling the Indian students to undergo military training for the first time. Applications for enrolment far exceeded the vacancies and there was great keenness. Unfortunately the strength of one Platoon did not allow of the actual enrolment of more than one half of the Civil Engineer Class students but the remainder received military drill instruction. Th

Overseer Class students continued to receive instruction in physical drill

Major General Sir Edwin Atkinson, K B E , C B , C M G , C I E , Master General of Supply and a former Principal of the College presided at the Convocation in July, 1924 During this year the grant for repairs was increased and much necessary and overdue work was carried out, including re roofing the College bazaar buildings and the completion of new out buildings and the re roofing of servants' quarters Dr P P Phillips on return from leave officiated as Principal from October, 1923 till the return from leave of Major E W C Sandes in October, 1924 A Special Committee was assembled by Government at Roorkee in December, 1924, to investigate certain matters connected with the syllabi courses of study and staff of the College, arising out of the introduction of the Reorganization Scheme of 1919 A very comprehensive report was submitted by this committee in 1925 which was subsequently dealt with, item by item by the Advisory Council whose recommendations caused Government to sanction several useful alterations and innovations in the College courses Mr A C Verrieres, C I E Chief Engineer, Buildings and Roads Branch, Public Works Department, United Provinces, an old student of the College presided at the Convocation in July, 1925, this being the first instance of a past student performing this duty An extension of the Indian Engineer Class Club was put in hand and also several internal alterations in the College itself and in hostels, and re roofing of certain hungalows with jack arches A very fine steel model of a plate girder bridge span, on a large scale, was presented to the College by Messrs Burn & Co , Howrah, and installed in one of the College model rooms which have been developed into useful instructional departments Mr R A Bradshaw Smith, I S E , joined the Staff as Professor of Civil Engineering (Irrigation), in February,

1925, Mr. L. L. Dawson having acted temporarily since Mr W. L. Stampe vacated the post in October, 1924.

The President at the College Convocation in July, 1926, was His Excellency Sir Malcolm Hailey, K C S I, C I E, Governor of the Punjab. He was invited to preside because the Punjab had of late years been so largely represented in the College. Indeed the Punjab candidates for the Civil Engineer Class had become as numerous as those from the United Provinces the Punjab paying the expenses of the training of every such candidate who gained admission though admissions were limited. The Board of Studies in 1926 formulated proposals for the improvement of the Overseer Class course and instruction. A grant was given by Government for the purchase of additional plant for the College Workshops which lacked modern generating machinery. Two vestibules, one classroom and three offices were re-roofed in the main College building and also certain servants quarters and small out-houses. Another lecturer's bungalow was re-roofed with jack arches.

The Convocation President in July 1927 was Mr (now Sir) B. D. O. Darley C I E I S E Chief Engineer Sarda Canal, and Secretary to Government United Provinces, Public Works Department Irrigation Branch. Mr Sahg Ram, I S E, an old student joined the Staff in June 1927 as Professor of Civil Engineering. The College was grieved to learn of the death of a distinguished past student, Sir Ganga Ram. During the summer a new flagstaff was erected in front of the College.

This brief history having now been written up to the end of the College Session of 1926-27—a period of 80 years since the foundation of the Thomason College in 1847—it may be well to continue it year by year in the form of a *Sessional Diary* including the *preceding* vacation, i.e., by yearly periods from July 15 to July 15, and this system will henceforth

and the electric supply given to Hardwar and adjacent places. A line was laid also to supply the whole of Roorkee, including the College, part of whose electric current now comes indirectly from its parent, the River Ganges. The new water supply system for the College estate, however, could not be installed as funds were not available. A very large steel model road bridge of Baltimore Truss type, with overhead bracing, was received during 1927 from Messrs Burn and Co., Howrah, and placed in the bridge model room during the Session 1927-28, complete with framed diagrams and calculations. Most of the cost was generously met by the firm. The liquidation of the College Stores was completed. The staff and students of the College learnt with the deepest regret on June 17, 1928, that His Excellency the Governor of the United Provinces, Sir Alexander Muddiman, Kt., K.C.S.I., C.I.E., had died on that day. His Excellency had undertaken to preside at the Annual Convocation in July, 1928. In consequence of this tragic event, Mr A. H. Mackenzie, C.I.E., Director of Public Instruction, United Provinces, presided at the Convocation and distributed the prizes and certificates. This function brought to a close a notable Session—the first since 1905 in which the College had been honoured by a visit from a Viceroy. A silver challenge cup, to be awarded annually to the best student in Games and Sports, was donated to the College by the Principal, Lieut. Colonel E. W. C. Sandes and was presented to the first winner at the Convocation, together with a miniature cup. Another silver challenge cup was donated by Mr B. D. Puri, Professor of Mathematics, for Squash Racquets Doubles, and a third cup by Mr J. Barnett, Personal Assistant to the Principal, for the Overseer Class in the Athletic Sports. These cups were also presented at the Convocation. A fourth silver cup, for an annual cross-country race, was promised by Mr R. A. Bradshaw-Smith, Professor of Civil Engineering, on

leaving the College when reverting to his Department in 1928

*Session 1928-29* —The Hon ble Raja Bahadur Kushalpal Singh, the United Provinces Minister for Education presided at the Annual Convocation in July, 1929 Dr P P Phillips officiated as Principal from May 1929 until the end of the session in place of Colonel Sandes who was granted leave During the year funds were provided by Government for the installation of electric light in all the College residential quarters a benefit which was appreciated by all concerned The separate department of Electrical Engineering and Physics was abolished and the instruction in Electrical Engineering transferred to the Mechanical and Electrical section at the Workshops Physics was combined with the work of the Chemistry Department which henceforth will be known as the Department of Applied Science Lieut J S Gurney took charge of the post of Head Master Overseer Class from the beginning of the session

*Session 1929-30* —Mr P H Tillard I S F Chief Engineer P W D B & R Branch, U P presided at the Annual Convocation in July 1930 Colonel Sandes proceeded on leave preparatory to retirement with effect from March 7 1930 and Mr P P Phillips was appointed to succeed him as officiating Principal in the first instance

*Session 1930-31* —Mr A H Mackenzie C I E Director of Public Instruction United Provinces visited Roorkee from April 8 to 10 and inspected the College Mr W Roche C I E I S E Chief Engineer P W D Irrigation Branch U P presided at the Annual Convocation The European students mess of the Civil Engineer Class had to be closed owing to paucity of members after having been in existence for 34 years Up to the last its members had a very fine record both in work and games

*Session 1931-32*—The Retrenchment Committee, appointed by Government for the Thomason College presided over by the Hon'ble Mr J P Srivastava, M Sc , A M S T , M L C , Minister for Education, United Provinces, met in Roorkee from November 12 to 14, 1931 His Highness the Maharaja of Jaipur visited the College in January, 1932, and Major General Addison on July 6 1932

The Photo Mechanical and Latho Department and Book Dépôt ceased to be departments of the College with effect from March 1 1932 The course of instruction in photography was abolished and the last award of medals in photography was made at the convocation on July 14, 1932

Dr P P Phillips Ph D F I C I E S Principal was superannuated with effect from March 22 1932 after serving the Thomason College for 28 years and Mr Raja Ram Professor of Civil Engineering succeeded him as officiating Principal from that date

Mr Gerald Lacey I S E Professor of Civil Engineering, proceeded on leave with effect from April 21, 1932 and reverted to the Irrigation Branch United Provinces, from October 17 1932 and Mr M L Garga Assistant Research Officer Irrigation Branch officiated as Professor of Civil Engineering up to July 15 1932 in his place

Professor Gerald Lacey offered an annual prize of Rs 25 to be awarded to a Civil Engineer Class student for the best performances at the meetings of the Thomsonian Society during each session

Mr C J Veale, F R G S , F R A S , Professor of Surveying and Drawing retired on pension with effect from March 8 1932

Dr M A Hamid Ph D , M Sc , joined as Temporary Professor of Applied Science on October 22, 1931

Lieut Col C A Bird, D S O R E , presided at the annual convocation

*Session 1932-33*—Many of the changes ordered by the Government in accordance with the report of the Retrenchment Committee which met in Roorkee from November 12 to 14, 1931 became operative with the start of this session.

The departments in the Civil Engineering Course were reduced from 5 to 3. The Department of Applied Science was abolished, Physics being added to the Department of Pure and Applied Mathematics and Chemistry. Geology and Mineralogy to the Department of Civil Engineering. The Department of Survey and Drawing was amalgamated with the Department of Civil Engineering and its professorship reduced to an assistant professorship.

The changes in the staff were

- (i) Abolition of the post of Professor of Applied Science
- (ii) Abolition of one of the posts of Professor of Civil Engineering, thereby reducing the number from 3 to 2
- (iii) Abolition of two posts of Instructors of the Overseer Class reducing the number from 5 to 2
- (iv) Abolition of one of the two posts of Lecturers in Mechanical Engineering
- (v) Abolition of the post of Superintendent of the College Office and combining this post to that of the Personal Assistant to the Principal

Further from the start of this session the Principal in addition to his ordinary duties became head of the Department of Civil Engineering and was called upon to lecture.

Mr H J Amoore ISE became Principal from October 6 1932.

Mr H T Cumming was appointed Assistant Professor of Survey and Drawing from the start of the session and Mr J Crawford ceased to be a lecturer in Mechanical

Engineering, becoming Headmaster of the Overseer Class from the same date relieving Mr H T Cumming

Rai Bahadur Debi Datta Mal, I S E , was appointed Professor of Civil Engineering, joining his appointment in February, 1933 thereby relieving Mr M L Garga, who reverted to his substantive appointment in the Irrigation Branch of the P W D , United Provinces

Raja Jwala Prasad retired Chief Engineer Irrigation Branch P W D U P presided at the Annual Convocation

*Session 1933 34* —Major A M McLean, Assistant Professor of Mechanical and Electrical Engineering who joined the staff of this College in October, 1906 left in March, 1934 on leave preparatory to retirement Mr J Crawford, Head Master, Overseer Class, officiated in his place in addition to his own duties

The Hon ble Sir J P Srivastava, Kt M Sc , M L C , Minister for Education United Provinces, presided at the Annual Convocation

*Session 1934 35* —Mr H J Amore Principal proceeded on leave out of India from March 15 1935 Professor Mahabir Prasad who joined the College as Professor of Civil Engineering on the forenoon of December 7, 1934, officiated as Principal from March 15, 1935

Mr J Crawford continues to officiate as Assistant Professor, Mechanical and Electrical Engineering

Mr P C Sen Gupta took over charge as officiating Headmaster, Overseer Class on February 11, 1935

Captain J Barnett proceeded on privilege leave from May 13 1935, for 2 months 25 days

Mr P. L Sharma, Lecturer in Drawing, proceeded on leave out of India for 6 months 21 days in continuation of College vacation of 1934, from October 22, 1934, but had to return earlier and resumed charge on December 8 1934

Mr P S Bhatnagar officiated as lecturer in Drawing in his place from October 22 1931 to December 8 1935

A special committee appointed by the Government to report on the revision of syllabus and course of study Civil Engineer class held its sitting in the College on January 6 and 7 1935

Sir Sita Ram President of the Legislative Council, paid a visit to the College on April 26, 1935

Session 1935-36 —Mr W M G Dawson, I S E , joined the Staff as Professor of Civil Engineering in the vacancy caused by Rai Bahadur Debi Datta Mal I S E , reverting upon completion of his term of office to the Irrigation Department United Provinces

Mr W M G Dawson I S E proceeded on leave combined with the College vacation in March 1936 and Mr K N Kathpalia I S E was appointed in his absence to deliver lectures in Hydraulics and Irrigation

In accordance with arrangements made by the Army Headquarters India with the Government of the United Provinces, Indian Commissioned Officers from the Indian Military Academy joined the Civil Engineering class of the College Three officers joined 2nd Lieutenants A N Kashyap N S Bhagat and Anant Singh

Session 1936-37 —Messrs Mababir Prasad I S E , and W M G Dawson I S E Professors of Civil Engineering reverted to their substantive appointments in the Public Works Department of the United Provinces, on March 15, 1937, and July 7 1937, respectively

Major H Williams R E , joined the Staff on October 8, 1936, being the officer deputed by Army Headquarters Simla, to be in charge of the Indian Commissioned Officers under going a post graduate course in Civil Engineering and Professor of Civil Engineering

Mr Raja Ram on completion of his period of 3 years as Malarial Engineer with the Government of India resumed his post as Professor of Civil Engineering on July 10, 1937

Mr H T Cumming, Assistant Professor of Survey and Drawing, proceeded on leave combined with the 1937 College vacation on April 9, 1937

Mr J Crawford, officiating Assistant Professor of Mechanical and Electrical Engineering, was confirmed in that post from March 28, 1935

Major Barnett Personal Assistant to Principal and Superintendent of the College Office, was away on leave from November 4 24, 1936

Mr M L Misra, Lecturer in Electrical Engineering, was on leave on medical certificate from October 27, 1936 to February 20 1937

Lala Phumman Ram, Instructor, Overseer Class, retired from service from January 4, 1937

*Session 1937 38* —Mr Raja Ram, Professor of Sanitary Engineering proceeded on long leave on October 16, 1937 and rejoined on April 18, 1938

Mr Romesh Chandra I E E , joined the staff as Professor of Civil Engineering on October 18, 1937 and reverted to his substantive appointment upon completion of the session

Mr P Chakravarti, Lecturer in Pure and Applied Mathematics, was on leave from April 13, 1938 to May 11, 1938

The Hon'ble Pandit Govind Ballabh Pant, B A , LL B Premier, United Provinces, visited the College on December 2, 1937, and addressed the students

The Hon'ble Mr Pearey Lal Sharma, Minister for Education, United Provinces, visited the College on December 21, 1937, and gave away the prizes at the Annual Sports

Mr R S Weir, Director of Public Instruction United Provinces visited the College in June 1938

At the close of the session passed out the first three Indian Commissioned Officers who joined the College in October 1935 for a 3 years post graduate course in Civil Engineering

Sir William Stanle K1 C I F very kindly presented a challenge cup for Inter-class athletic events This was first awarded and won by the Civil Engineering class 3rd year

Mr Puran Mal retired Assistant Engineer Public Health Department donated a sufficient sum to provide annually 2 silver medals one for the Civil Engineer class and one for the Overseer class The medals to be known as the Puran Mal silver medals for Public Health Engineering The medals to be awarded annually to those students who obtain the highest marks in the final examination on Sanitary Engineering and Water Supply The medals were first awarded at the Convocation in July 1938

*Session 1938-39*—Mr H J Amore Principal proceeded on leave preparatory to retirement from May 5 1939 and Major C D Reed R F carried on his duties in addition to his own till July 15 1939 and made over charge to Mr E D Puri Professor of Mathematics on July 16 1939

Major H Williams R F Professor of Civil Engineering and officer in charge of Indian Commissioned Officers reverted to Defence Department from November 7 1938 and was succeeded by Major C D Reed R E who also reverted to Defence Department from July 16 1939

Mr Raja Ram Professor of Civil Engineering resigned from May 8 1939

## HISTORY

Mr B D Puri, Professor of Mathematics was on leave on medical certificate from January 18, 1939 to April 5, 1939 and Mr P. Chakravarti, Lecturer in Mathematics officiated as Professor of Mathematics during the period

Mr H T Cumming, Assistant Professor of Survey and Drawing was on leave on medical certificate from December 23, 1938 to February 13, 1939 when he was invalided by the Medical Board His duties were carried on by Mr S R Singh, Lecturer in Surveying

Major J Barnett, Personal Assistant to the Principal, retired on March 7, 1939

Mr P Chakravarti, Lecturer in Mathematics proceeded on leave preparatory to retirement from April 6, 1939

Mr P L Sharma, Lecturer in Drawing was on leave from January 27 1939 to February 28, 1939 and his duties were performed by Mr H J Amore, Principal and Major J Barnett, Personal Assistant to the Principal

Mr M L Misra, Lecturer in Electrical Engineering was on leave from October 28, 1938 to December 14, 1938 when he was invalided by the Medical Board

His duties were performed by Lieutenant-Colonel J. Crawford, Assistant Professor of Mechanical and Electrical Engineering and Mr. B L Sharma, Lecturer in Mechanical Engineering

The Hon'ble Sri Sampurnanand, BSC, Minister for Education, United Provinces visited the College on April 11, 1939.

His Excellency Sir Harry Haig, KCSI, CIE, ICS, Governor of the United Provinces accompanied by Lady Haig visited the College on July 15, 1939 and presided at the Annual Convocation

The Defence Department withdrew its Indian Commissioned Officers, who were undergoing post graduate course in this College and along with them their officer-in-charge from the end of this session

A Committee appointed by Government to reorganize this College visited the College on July 7, 8 and 9, 1939

Session 1939-40—Major C D Reed R I , Officiating Principal Professor of Civil Engineering and Instructor Indian Commissioned Officers, was withdrawn by the Military Department and made over charge of the post of Principal to Mr B D Puri, Professor of Mathematics and that of the Professor of Civil Engineering to Mr S R Singh, Lecturer in Surveying on July 16 1939

Rai Bahadur Mool Chand Bijawat, I S E Superintending Engineer, Public Works Department Irrigation Branch joined as Professor of Civil Engineering on October 29 and took over charge of the post of Principal from Mr B D Puri, Professor of Mathematics and that of Professor of Civil Engineering from Mr S R Singh Lecturer in Surveying on the same date

Rai Bahadur Madan Gopal Sardana retired Superintending Engineer of the Public Works Department Irrigation Branch took over charge as Principal from Rai Bahadur Mool Chand Bijawat on January 17 1940

The post of Assistant Professor of Survey and Drawing was converted into that of Assistant Professor of Civil Engineering Mr V G Garde was appointed to it and took over charge from Mr S R Singh Lecturer in Surveying on October 16 1939

Mr Jai Krishna was appointed temporary Lecturer in Civil Engineering from December 1, 1939 to January 16, 1940.

## HISTORY

Mr B D Puri Professor of Mathematics was on leave on medical certificate from January 18, 1939 to April 5, 1939 and Mr P Chakravarti, Lecturer in Mathematics officiated as Professor of Mathematics during the period

Mr H T Cumming, Assistant Professor of Survey and Drawing was on leave on medical certificate from December 22, 1938 to February 13, 1939 when he was invalided by the Medical Board His duties were carried on by Mr S R Singh, Lecturer in Surveying

Major J Barnett Personal Assistant to the Principal retired on March 7, 1939

Mr P Chakravarti Lecturer in Mathematics proceeded on leave preparatory to retirement from April 6, 1939

Mr P L Sharma Lecturer in Drawing was on leave from January 27 1939 to February 28, 1939 and his duties were performed by Mr H J Amore Principal and Major J Barnett, Personal Assistant to the Principal

Mr M L Misra, Lecturer in Electrical Engineering was on leave from October 28, 1938 to December 14, 1938 when he was invalided by the Medical Board

His duties were performed by Lieutenant Colonel J Crawford, Assistant Professor of Mechanical and Electrical Engineering and Mr B L Sharma, Lecturer in Mechanical Engineering

The Hon'ble Sri Sampurnanand, B SC, Minister for Education, United Provinces visited the College on April 11, 1939

His Excellency Sir Harry Haig, K C S I, C I E, I C S Governor of the United Provinces accompanied by Lady Haig visited the College on July 15, 1939 and presided at the Annual Convocation

The Defence Department withdrew its Indian Commissioned Officers who were undergoing post graduate course in this College and along with them their officer in charge from the end of this session

A Committee appointed by Government to reorganize this College visited the College on July 7 8 and 9 1939

Session 1939 40—Major C D Reed R I Officiating Principal Professor of Civil Engineering and Instructor Indian Commissioned Officers was withdrawn by the Military Department and made over charge of the post of Principal to Mr B D Puri Professor of Mathematics and that of the Professor of Civil Engineering to Mr S R Singh Lecturer in Surveying on July 16 1939

Rai Bahadur Mool Chand Bijawat I S E Superintending Engineer Public Works Department Irrigation Branch joined as Professor of Civil Engineering on October 29 and took over charge of the post of Principal from Mr B D Puri Professor of Mathematics and that of Professor of Civil Engineering from Mr S R Singh Lecturer in Surveying on the same date

Rai Bahadur Madan Gopal Sardana retired Superintending Engineer of the Public Works Department Irrigation Branch took over charge as Principal from Rai Bahadur Mool Chand Bijawat on January 17 1940

The post of Assistant Professor of Survey and Drawing was converted into that of Assistant Professor of Civil Engineering Mr V G Garde was appointed to it and took over charge from Mr S R Singh Lecturer in Surveying on October 16 1939

Mr Jai Krishna was appointed temporary Lecturer in Civil Engineering from December 1 1939 to January 16, 1940

Mr Jai Krishna was appointed Personal Assistant to Principal from January 17, 1940, relieving Mr S R Singh from Personal Assistant to Principal's duties from the same date

Mr Chandra Prakash Mital was appointed temporary Lecturer in Civil Engineering from June 3, 1940 to July 13, 1940

Dr Zaki Uddin Ahmad joined as Lecturer in Electrical Engineering on October 16 1939 relieving Lt Col J Crawford, Assistant Professor of Mechanical and Electrical Engineering and Mr B L Sharma Lecturer in Mechanical Engineering on the same date

His Excellency Sir Maurice Gurner Hallett, K C S I , C I E , I C S , Governor of the United Provinces, visited the College on April 18 1940

Dr Sir Shah Muhammad Suleman Vice Chancellor of the Muslim University Aligarh Judge of the Federal Court visited the College on April 20 1940

Dr Panna Lall, M A , B SC LL B , (Cantab) D LITT (Agra), Bar at Law, C I E , I C S , Adviser to His Excellency the Governor United Provinces, visited the College on July 12 1940

*Session 1940-41*—Lieut Col C D Reed of the Engineer in Chief's branch visited the College in connexion with the training of B N C Os as Military S D Os

Mr Chatterjee Regional Inspector visited the College in connexion with the training of War technicians in the College Work shops

The last batch of students nominated by the Punjab Government for studying in the Civil Engineer class of this College completed their course this Session

Services of Lieut Col J Crawford, Assistant Professor of Mechanical and Electrical Engineering were placed at the disposal of the Army Department with effect from May 15 1941 and Mr B L Sharma Lecturer in Mechanical Engineering is officiating in his place from the same date

Revised new Syllabus for the Civil Engineer class was introduced from this session

Session 1941-42—The training of British Non Commissioned Officers and War technicians started from July 1941. In connection with the training of War technicians this College has been made a Civilian centre with a strength of 650 War technicians

Colonel Gordon visited the College to see what facilities this college could give for the training of Surveyors and other P W Staff

The post of a permanent lecturer in Civil Engineering was created and Mr Jai Krishna Personal Assistant to Principal was appointed to it

Mr Jagdamba Prasad was appointed officiating lecturer in Mechanical Engineering with effect from January 9 1942

Mr Kishan Chandra Misra was appointed officiating Personal Assistant to Principal with effect from January 10 1942

Two topmost students of the Civil Engineering class were guaranteed appointments in the Provincial Service of Engineers with effect from the year 1942-43. These guaranteed posts were also given to the students who passed out in July 1941

# LIST OF PRINCIPALS

---

Colonel R MacLagan R E	1847—1852
Major Oldfield R E (Offg)	1852—1856
Colonel R MacLagan R E	1856—1860
Captain C E S Williams R E	1860—1862
Colonel J G Medley R E	1863—1871
Colonel A M Lang R E	1871—1877
Colonel A M Brandreth R E	1877—1891
Colonel I D M Brown VC ISC	1891—1892
Lt Col J Chibborn CIE ISC	1892—1902
Lt Col E H deV Atkinson CIE R E	1902—1915
W G Wood Esq CSI	1916—1921
Lt Col E W C Sandes DSO MC R E	1921—1931
Dr P P Phillips PhD FIC ITS	1931—1932
Hi J Amore Esq ISE	1932—1939
Rai Bahadur Madan Gopal Sardana	1940—

NOTE.—The ranks shown are those held on vacating the appointment. Officers and principals are omitted from the list but many names appear in the Calendar of 1911 and the names of Mr E F Topley Mr C J Veale Mr Raja Ram Major C D Reed R E Mr B D Iuri and R B M C Bajawat may be added for recent years.

G Lacey, Esq , B Sc , C I E , I S E , Chief Engineer, Eastern Canals,  
United Provinces

## LIST OF CONVOCAATION PRESIDENTS

FROM 1890

- 1890 The Hon ble Sir Auckland Colvin K C M G , C I E ,  
Lieut Governor, N W P
- 1891 Mr T H Wickes, Chief Engineer, P W D , N -W P
- 1892 The Hon'ble Sir Auckland Colvin, K C M G , C I E ,  
Lieut Governor, N W P
- 1893 Mr A H Harrington I C S , Commissioner Meerut  
Division
- 1894 Mr J G H Glass C I E Chief Engineer, P W D ,  
N W P
- 1895 } Principal Thomason College (Lt Col J Chibborn,  
to { I S C )  
1897 }
- 1898 Offg Principal, Thomason College (Lt H B D  
Campbell R E )
- 1899 } Principal, Thomason College (Lt Col J Chibborn,  
to { I S C )  
1901 }
- 1902 His Honour Sir J J D LaTouche, K C S I ,  
Lieut Governor, U P
- 1903 Principal, Thomason College (Major E H deV  
Atkinson, R E )
- 1904 Lt Col A E Sandbach, R E 1st Sappers and  
Miners, Roorkee
- 1905 Lt Col S V Thornton, R A O C Station, Roorkee
- 1906 } Principal, Thomason College (Major E H deV  
to { Atkinson, R E )  
1909 }

- 1910 Mr C E V Goument, Chief Engineer, P W D ,  
U P
- 1911 }  
to } Principal, Thomason College (Lieut Colonel E B  
1915 } deV Atkinson C I E , R E )
- 1916 Mr W Gunnell Wood C S I , Chief Engineer,  
P W D , U P
- 1917 His Honour Sir James Meston, K C S I , Lieut -  
Governor U P
- 1918 Mr F C Rose M I C E Secretary to the Govern-  
ment of India P W D
- 1919 Mr T R J Ward C I E M V O Inspector General  
of Irrigation in India
- 1920 Colonel Sir S D A Crookshank K C M G C B ,  
C I L D S O M V O Secretary to the Gov-  
ernment of India, P W D
- 1921 Mr St J Gebbie, C I E Inspector General of  
Irrigation in India
- 1922 His Excellency Sir Harcourt Butler K C S I , C I E ,  
Governor, U P
- 1923 His Excellency Sir William Marris K C S I ,  
K C I E , Governor U P
- 1924 Major General Sir E H deV Atkinson, K B E ,  
C B , C M G C I E , Master General of Supply
- 1925 Mr A C Verrières, C I E Chief Engineer, P W D ,  
U P
- 1926 His Excellency Sir Malcolm Hailey K C S I , C I E .  
Governor Punjab
- 1927 Mr B D O Darley, G I E , Chief Engineer Sirir-  
Canal, U P
- 1928 Mr A H Mackenzie, C I E , Director of Public In-  
struction U P
- 1929 The Honble Raja Bahadur Kushalpal Singh, M A ,  
LL B , Minister for Education, U P

- 1930 Mr P H Tillard Chief Engineer, P W D , U P
- 1931 Mr W Roche, C I E . I S E , Chief Engineer,  
P W D , Irrigation Branch, Western Canals  
U P
- 1932 Lieut Col C A Bird D S O R E O C Station,  
Roorkee
- 1933 Raja Jwal Prasad Retired Chief Engineer,  
P W D Irrigation Branch U P
- 1934 The Hon ble Sir J P Srivastava Kt , M Sc  
M L C Minister for Education, U P
- 1935 Sir William Stampe Kt C I E I S E , Chief  
Engineer and Secretary to Government, U . P ,  
P W D , I B
- 1936 Mr H R Harrop M A Director of Public Instruc-  
tion United Provinces
- 1937 Lt Col W dell Hug D S O R E Chief En-  
gineer P W D B and R Branch United  
Provinces
- 1938 Mr M R Richardson C I E I S E Chief  
Engineer P W D I B United Provinces  
and President of the Central Board of Irriga-  
tion
- 1939 His Excellency Sir Harry Haig K C S I C I E ,  
I C S Governor of the United Provinces
- 1940 Dr Panna Lal M A B Sc LL B (Cantab)  
D LITT (Agra) Bar at Law C I E I C S ,  
Adviser to His Excellency the Governor,  
United Provinces
- 1941 Mr J C Powell Price M A C I E , I E S ,  
Director of Public Instruction United Prov-  
inces
- 1942 Mr G Lacy B Sc C I E , I S E Chief Engineer,  
Western Canals United Provinces

## FROM 1890

*(Of ranks included in Articles 1 to 30 only of the Warrant  
of Precedence, 1922 )*

---

- 1890 The Hon'ble Sir Auckland Colvin, K C M G , C I E ,  
Lieut Governor, N W P
- 1892 The Hon ble Sir Auckland Colvin, K C M G , C I E ,  
Lieut Governor N W P
- 1895 His Honour Sir A P MacDonnell, K C S I Lieut  
Governor, N -W P  
Lieut General Sir W K Elles K C B , Command  
ing the Forces in Bengal

 1907 F J Jones Esq  
 1908 Khan Bahadur Mohammad Abdul Aziz, C I E.  
 1909 Rai Salub Gucharan Das Mehta  
 1911 J aksampati Mi ra Esq

Only such private students from outside the United Provinces or States within or outside the United Provinces will be admitted to the Civil Engineer Class of the College, who previously apply through the Government of the Province or State in which they reside for permission to appear in the entrance examination and provided that the Government or State concerned agrees, in the event of such students gaining a place in the examination which would entitle them to admission, to pay a contribution towards the cost of their training, based on the actuals of the preceding financial year. The only exceptions to this rule will be where the United Provinces Government agree in special cases to waive this contribution or the students themselves agree to pay it.

From the entrance examination to be held in June, 1939, inclusive, the Punjab Government will not nominate, nor pay for any student admitted to this College from that province.

There is, however, no bar to the admission of a candidate from that province should the parent or guardian of any candidate be willing to pay the cost of training in addition to the ordinary fee and living expenses at the College.

The name and age of a candidate will be taken from the original university records and for candidates who have not appeared for a university examination, from college, or failing a college, from school records. No alterations in the records will be recognized except in the case of purely clerical errors. Application for examination must be accompanied by a true copy of university, college or school registers, as the case may be, signed by the registrar, principal or head master and under no circumstances will any alteration be accepted to the advantage of the candidate.

All Europeans before admission must be properly protected by inoculation against enteric fever to the satisfaction of the Medical Officer in charge of the College. If not protected, they must be inoculated on arrival at the College.

2 No European or Anglo-Indian will be allowed to enter the College if married or to continue in the College, if he marries before completing his course

3. The College session commences on October 16 Applications for admission should *reach* the Principal, *complete in all respects not later than May 1 nor before February 1, preceding* The entrance examination will be held in the first week of June or thereabouts All applications should be accompanied by a statement of—

Date of birth of the candidate

The school or schools at which he has been educated

The profession situation relationship and residence of his father or guardian

One of the examination centres where he wishes to be examined (*vide* paragraph 9) \*

N.B —Great care should be taken to ensure that forms are complete in every respect. Incomplete forms are liable to be rejected. Forms of application with instructions showing how they should be filled in may be detached from the circular when required.

4 Every candidate will be required to produce testimonials (which will not be returned) of good moral conduct, signed by the instructor under whom he has been educated, or of some other superior under whom he may have been employed or brought up and these testimonials should have reference especially to his conduct during the two years immediately preceding his application for admission

5 A medical certificate must be furnished on the prescribed printed form enclosed in the circular, no other form will be accepted

NOTE—The fee prescribed by Government for this examination is Rs 4 which must be paid by the candidate direct to the Civil Surgeon Commissioned Medical Officer prior to the examination

6 The examination fee of Rs 20 should be deposited in any Government Treasury in United Provinces under head

VIII—Education F General—Miscellaneous Civil Engineering College Roorkee Examination Fee through treasury chalang which are obtainable from the Treasury. The receipted treasury chalan must be attached to the application form. Fee by postal money orders will be acceptable from stations where there are no Government treasuries. Until the fee or the receipted Treasury chalan has been received by the Principal the candidates application will not be registered. In no circumstances will this fee be refunded.

7 The minimum qualifying test for admission to the entrance examination is the *Intermediate Examination with Physics Chemistry and Mathematics* of the Board of High School and Intermediate Education United Provinces or the *Intermediate Examination with Mathematics Physics and Chemistry* of any University in British India established by law. The candidates who have appeared with the subjects mentioned above for this examination before the date of the College entrance examination will also be allowed to sit provisionally for the College entrance examination. Such candidates must however furnish with their application forms a certificate signed by the Head of their College showing the subjects taken by them for the Intermediate Examination. The information of their passing the Intermediate Examination accompanied by a certificate from the Head of their College certifying it should be sent as soon as possible otherwise their results will be excluded from the entrance examination results of this College.

*N B*—If approved by Government the minimum qualifying test for admission to the entrance examination in 1943 will be the Intermediate Examination of the Board of High

School and Intermediate Education United Provinces or the Intermediate Examination of any University in British India established by law or in the case of candidates from European Schools the Cambridge School Certificate with credit in additional Mathematics and a pass in either Chemistry or Physics or the London University Matriculation Certificate which covers the subjects required for the entrance examination or such other qualifications as may be accepted by Government as equivalent thereto

8 The entrance examination is competitive and those who stand highest on the list of passed candidates (only to the number of available vacancies which is for the present fixed at 20) will be selected for admission to the College. Provided the candidates pass the qualifying entrance examination six places will be reserved for Moslems, one for scheduled castes and one for other minority communities from the United Provinces. The Local Government has power to relax in very special cases the rule regarding the number of admissions. Any candidate who after being duly notified fails to join the College on the day fixed for the re-opening of the session or who before that date fails to obtain from the College authorities definite permission to join on some later date will forfeit his right to admission.

No replies will be given to any telegrams or letters enquiring the results of the entrance examination. A copy of the printed results will be sent to each candidate when published.

9 The following is the list of the four groups of subjects for the competitive entrance examination. The examination will be held by means of written papers at the following centres only viz. Rooskee, Allahabad, Lucknow, Agra and Mussorie\*. Candidates may elect the centre at which they wish to be examined.

---

\*The fixing of Mussorie as a centre is conditional on seven candidates being forthcoming.

## GROUP No I LANGUAGES (250).

## (a) English Essay, General Knowledge, and Every Day Topics

8 Hours

150 Marks.

The candidates will be required to write a short essay on a given subject. The subject set will not be one requiring deep knowledge or thought.

On General Knowledge and Every Day Topics questions will be set on (i) the more important topics of the day and (ii) simple literary, geographical, scientific and other questions.

The chief object of the English Essay and of the questions on General Knowledge and Every Day Topics is, in the first instance, to test the ability of the candidates to express themselves in clear and correct English as well as their general knowledge and interest in current affairs.

Marks up to 10 per cent of the maximum may be deducted for bad handwriting, errors in spelling, careless work and much crossing out.

## (b) Hindustani

2 Hours

100 Marks

Translation of extracts, in the Persian or Hindi character, from an easy Hindustani book, and of easy English sentences into colloquial Hindustani, and grammatical questions. Full marks will not be given to candidates unable to write the Persian or Hindi character, but the Hunterian system of transliteration may be adopted.

## GROUP No II • MATHEMATICS (300)

## (a) Mathematics I (Arithmetic, Geometry and Mensuration).

8 Hours

100 Marks

In this paper questions will be set on problems on (i) General arithmetic principles (ii) the subject matter of plane geometry comprising the syllabus as required for the High School Examination of the United Provinces Intermediate Board, and (iii) mensuration of plane rectilinear figures and of solids like parallelopipeds, prisms, pyramids, cones, cylinders, spheres and their sections.

Candidates will be expected to be familiar with abridged methods of calculation. In geometry proofs of proposition and simple riders involving solution of graphical problems may be set.

## (b) Mathematics II (Algebra, Trigonometry and Co-ordinate Geometry).

8 Hours

100 Marks

*Algebra* —General Algebraic principles factors, fractions solution of linear simple and simultaneous and of quadratic equations elementary properties of ratio proportion and various elementary graphics and graphical solutions of equations Binomial theorem for positive index and use of binomial and exponential theorems for any index Elementary partial fractions Simple arithmetic and finite geometrical sequences Use of logarithms

*Trigonometry* —Trigonometrical ratios and their values in special elementary cases General properties of the ratios and identical relations between them Formulae for ratios of multiple and sub-multiple angles Elementary relations

\*No books of any kind are allowed in the Examination hall. Logarithmic tables if required will be supplied by the officer conducting the examination. They should not be employed to avoid ordinary abridgement in the calculation.

between ratios and circular measure Elementary properties of triangles Use of logarithms and trigonometrical tables Solutions of triangles, heights, and distances Elementary properties of quadrilaterals and regular polygons Elementary inverse notation Solution of equations De'Moivre's theorem

*Co-ordinate Geometry*—Elementary co ordinate geometry of the straight line and the circle (both in Cartesian and polar co ordinates), including also the elementary properties of the parabola and the ellipse (in Cartesian co ordinates only)

(c) *Mechanics (Dynamics and Statics).*

2 Hours

100 Marks

Velocity composition of velocities relative velocity, acceleration composition of acceleration, graphical representation

Laws of motion force, units of force, moments of forces, composition of coplanar concurrent and parallel forces; couples Reduction of a set of coplanar forces and conditions of equilibrium graphical treatment of forces Determination of centroids in simple cases, Friction and its laws

Projections neglecting resistance, motion in circular path, centripetal and centrifugal forces, principles of conservation of momentum and energy, angular velocity and acceleration, moments of inertia in very simple cases, simple harmonic motion, simple and compound pendulums

GROUP No III PHYSICAL SCIENCE (100)

(a) *Physics.*

1½ Hours

50 Marks

Simple Physical Measurements liquids and gases Barometry

Heat and Temperature Thermometry and calorimetry, expansion with variations of temperature, Fusion, evaporation boiling point, vapour pressure, latent heat, conductions, convection, radiation and mechanical equivalent of heat

The production and propagation of sound nature of wave motion, reflection of sound resonance and determination of velocity

Propagation reflection and refraction critical angles, mirrors lenses spectrum, simple telescope microscope photometer

Properties of magnets induction magnetic fields, lines of force the law of magnetic force and magnetic moments

Conductors and insulators electrification by friction and induction influence machines distribution of electrical charge on conductors potential electrical capacity primary cells, properties of the electric current currents and resistance measurements Ohm's law, series and parallel connexions, shunts

No practical examination is prescribed but all candidates are expected to have previously undergone an elementary course of practical work in the laboratory

### (b) Chemistry

1½ Hours

50 Marks

General properties of matter simple and compound substances laws of chemical combination acids bases and salts, metals and non metals combustion oxidation and reduction Atomic and molecular weights, chemical equivalents, the atomic theory symbols formulae simple chemical equations, Avogadro's rule Dulong and Petit's law, Boyle's law, Charles' law, vapour density diffusion and an elementary knowledge of solution dissociation and electrolysis The preparation, general properties and principal compounds of hydrogen oxy

gen, nitrogen, the halogens, carbon, sulphur, phosphorus and silicon.

No practical examination is prescribed, but all candidates are expected to have previously undergone an elementary course of practical work in a laboratory.

### GROUP No IV DRAWING\* (150)

#### (a) Geometrical Drawing

3 Hours

100 Marks.

Printing Simple Diagonal and Vernier Scales Drawing of plane Geometrical figures, arches, projections and sections of simple solids The course is covered by Chapters 1—7 inclusive of the Thomason College Manual of Drawing, Part I.

#### (b) Frechand Drawing

1 Hour

50 Marks.

Drawing of any architectural ornament or pattern to a reduced or enlarged scale All work will be done free hand, no rulers, etc being allowed

10. To pass the examination a candidate must obtain  $33\frac{1}{3}$  per cent. of the 250 marks for Group I, Languages and  $33\frac{1}{3}$  per cent. of the 150 marks for Group IV, Drawing;  $33\frac{1}{3}$  per cent. of the 100 marks for the Mathematics, Paper I,  $33\frac{1}{3}$  per cent. of the 100 marks for the Mathematics, Paper II, and  $33\frac{1}{3}$  per cent. of the 100 marks for the Mechanics Paper, and  $33\frac{1}{3}$  per cent. of the total aggregate number of marks, viz. 800 No marks will be allotted in any paper if a candidate obtains less than 20 per cent. and up to 10 per cent. of the marks in each paper may be deducted for slovenly work.

11 Sixteen scholarships of Rs.50 a month are sanctioned for this class out of which three are reserved for

\*Particular attention is called to this subject in which many candidates fail to qualify

students from the scheduled castes one in each year. Of these scholarships six will be awarded to first-year students, five to second-year students and five to third-year students

These scholarships are awarded to first year students on the results of the entrance examination and to second and third year students on the results of the first and second year's work and examinations and are tenable for the *nine months of the College session*. All the scholarships are reserved for candidates of the United Provinces

Government has been pleased to sanction the award of a Passing Out Scholarship of approximately Rs 250 to Rs 300 payable from the College Stores Trust Fund to the senior European or Anglo Indian student, who successfully passes the third year Final Examination of the Civil Engineer Class after completing the whole course of three years

12 A College tuition fee of Rs 24 per mensem will be paid during the session by each student of the class irrespective of his domicile

13 The engineer class students maintain and run a common mess, catering for vegetarians non vegetarians, and those messing according to European diet. The students in the running of this mess are helped by a member of the staff appointed by the Principal each session as President. All students are advised to join. Should they not do so, they have to make their own arrangements for messing

14 Students are encouraged to take up military training by joining either the Indian Auxiliary Force or the University Training Corps. Physical Training is compulsory

15 It is desirable that every student should be able to swim before joining the College.

16 Each student should, on joining the College, be provided with a good set of drawing instruments and necessary

class books for his own use. Class books are obtainable at the College Book Depot

17. Quarters are provided for all students of the Civil Engineer Class in hostels near the College, a student being given a room to himself. The charges for rent and conservancy are Rs.5-12 per mensem. The hostels have been electrified, the charges for current being annas four per unit. Students have to provide their own fans.

18. A limited number of sets of furniture, as detailed below, are available for issue to students in order of seniority for which a monthly rental of Rs. 2-8 is charged :—

- 1 Bed cot with mosquito frames and mattress.
- 1 Armless chair.
- 1 Easy chair.
- 1 Table (large), with book shelf.
- 1 Small table.
- 1 Towel rack.
- 1 Chest of drawers

Students should arrange to bring their own mosquito nets and durries.

19. Every candidate before he can be allowed to join the College must satisfy the Principal that he has sufficient means to defray his expenses during his course at Roorkee.

Any student failing to pay his College dues,\* or to make sufficient progress in study, will be suspended or ultimately

\*The words " College dues " include—

- (i) College fees
- (ii) Rent and conservancy.
- (iii) Rent of College furniture
- (iv) Electric current charges
- (v) Recreation fund subscription and cost of articles purchased from recreation stores.

removed from the College. The parent or guardian of any student so suspended or removed shall be held responsible for the payment of any debts whatsoever which may have been contracted while the student was in the College. Although every precaution is taken to prevent students from running into debt, the College authorities are in no way to be considered responsible for such debt.

20. The College year usually commences on October 16 and closes on July 15. Candidates admitted to the College on the results of the entrance examination held in June will be informed on what date to join the College in the following October.

21. Students in the Civil Engineer Class are trained for the Indian Engineering Services and the Civil Engineering profession generally. Many have gained employment outside India.

22. The Civil Engineering Course extends over three years. In the third year in March the final examination is held, when those students who have completed their course of study and have qualified will be awarded a diploma in Civil Engineering and will be entitled to use the letter C E (Roorkee) after their names.

A fee of Rs 40 is payable in the third year in February by each student, who intends to appear for this examination. If a student, having paid the fee, does not eventually appear for the examination, the fee will not be refunded.

23. The marks each student has to obtain to qualify for admission to the second and third year, and to obtain the College Diploma in Civil Engineering awarded upon completion of this third year are as follows —

- (a) For admission to the second year the first year students are required to obtain 33 per cent of the marks allotted to each Sub Group for written

examinations and practical work respectively and 50 per cent of the total marks

- (b) To return to the College at the end of the second year the students are required to obtain 33 per cent of the marks allotted to each Sub Group for written examination and practical work respectively in that year (i.e. in the second year) and 50 per cent of the total marks for the two years, i.e. of the full marks for the second year together with the reduced marks of the first year
- (c) To pass out of the College at the end of the third year the students are required to obtain 33 per cent of the marks allotted to each Sub Group for written examination and practical work respectively, in that year (i.e. the third year), and 50 per cent of the total marks for the three years i.e. of the full marks for the third year together with the reduced marks for the first and second years
- (d) The ordinary Diploma is awarded to students who qualify as above and obtain less than 66 per cent of the total marks. The honours Diploma is awarded to students who qualify as above and obtain 66 per cent or more of the total marks. Students who fail in any year will be allowed to repeat their course provided their stay in the College does not exceed four years on condition that such a student will not be eligible for academic prizes, scholarships or guaranteed appointments

Cases of failures due to prolonged absence through sickness or other circumstances, beyond the students' control, will be considered and decided upon their merits

24 No student will be eligible for any College academic prizes unless he completes his course concurrently with the students who entered the College in the same year

25 Arrangements for giving practical training to Engineer students of the United Provinces upon completion of their course at the College will be made as far as possible in the United Provinces Public Works Department, Irrigation and Buildings and Roads branches During the period of such practical training no allowances of any kind are now sanctioned.

26 The list of the text-books, etc. used in the Civil Engineer classes of the College is given on page 91. The prices quoted are approximate

27 Drawing instruments, drawing boards, T-square, etc. are procurable in the Bazar, every student must provide himself with these at his own cost

28 Any student, who is expelled from the College for misconduct, will not be allowed to appear in any examination conducted by the College

29 Students will not be permitted to appear for any external examinations during their College course.

30 All students have to be in possession of the booklets of Standing Orders and Course of Study A plea of ignorance for the breach of any of the former is not accepted A copy of each of these booklets will be issued to each new student on arrival and the cost recovered in his first bill Students therefore should not provide themselves with out of date copies

Any student requiring an extra copy of the Course of Study may obtain it on payment from the Assistant Superintendent, Government Press, Roorkee Branch, Roorkee

October, 1912

## Memorandum of Expenses of Students of the Civil Engineer Class

THE following information is published for the guidance of parents and guardians, and for their assistance in determining the probable expenses of a course of instruction at the College. Economical management is aided as far as possible by the College authorities.

It must be clearly understood that students cannot be permitted to remain in the College if their dues\* of any kind are not paid promptly on demand. The probable expenses of a student while at the College are shown under three heads, viz. the initial expenses at the beginning of each yearly term and the monthly current expenses and the final examination expenses. All College dues must be paid before the 21st of the month to which they relate and any student in arrears on the first of each month will lose all marks for any examination that may occur between this date and that on which he clears his account. Guardians are advised to send the above amounts direct to the Principal, and, if convenient, the whole remittance intended for the student can thus be sent, and the balance will at once be made over to him.

---

\* NOTE.—The words "College dues" include—

- (i) College fees
- (ii) Rent and conservancy
- (iii) Rent of College furniture
- (iv) Electric current charges
- (v) Recreation fund subscription and cost of articles purchased from recreation stores
- (vi) All dues in connexion with Engineer Class Club
- (vii) All dues of College dairy, College shoe maker, College shopkeeper, College tailor, College sweet seller and College stores
- (viii) All dues in connexion with Common Civil Engineer Class Mess

## Details of Expenses

Each student upon first joining the College and at the commencement of each subsequent year has to incur certain non-recurring expenses. The details of these with approximate costs, as far as it is possible to give them, are stated below. Every student has to have certain text books of his own for the year's work. These books are obtainable at the College Book Depot at prices  $12\frac{1}{2}$  per cent lower than published prices. The costs quoted take this into consideration. The list of these books is given on page 91.

N B—List and prices are liable to alteration. Prices shown are all approximate.

Notes for the guidance of candidates when filling in application forms for Entrance Examination for classes in the Thomason College.

*General*

**IMPORTANCE.**

It is impressed upon candidates that failure to observe these instructions implicitly must result in prolonged correspondence and possibly the rejection of the application. All forms when sent to this College should be pinned together. All forms must be kept clean.

**NAME OF CANDIDATE.**

The full name of the candidate *and not initials* must be shown on all papers and it is important to note that only the name as entered in the educational certificate must be used. Spelling of name should be the same in all the forms as are in the educational certificate or as will appear in the *Gazette* in case of provisional candidates. No additions to or omissions from that name will be permitted. In the case of Europeans or Anglo Indians the production of a birth or baptismal certificate in support of additional Christian or surname will not be recognized.

**DATE OF BIRTH**

The date of birth as entered in the application forms must be the same as that entered in the educational certificate which must be certified. The production of a birth certificate or horoscope will not be accepted as proof for any change from the date given in the educational certificate.

**GENERAL**

Separate forms should be filled in for each Examination for Civil Engineer, Overseer or Draftsman classes.

*Particular***MORAL CHARACTER CERTIFICATE**

It should generally be signed by the Head Master or the Principal of the institution in which the candidate has studied, failing this by a gazetted officer other than the relation of the candidate. The words "last two years" should be crossed out only when the candidate has been in two institutions in which case two separate certificates should be obtained and furnished. These should relate to the period he has been in each institution and the period should be stated.

**EDUCATIONAL CERTIFICATE**

A word to word copy of the Intermediate Examination certificate in case of Civil Engineer class and the High School Examination in the case of the Overseer class candidates verified by a government gazetted officer should be furnished. If the candidate has only appeared at the Examination a certificate from the Principal or the Head Master stating that he has appeared at the Intermediate Examination or the High School Examination showing the year in which he has appeared should be furnished. The result of such examinations should be communicated to the Principal as soon as they are published. Full designation of the verifying officer and the date on which he verifies the certificate should be given under his signatures.

**MEDICAL CERTIFICATE**

It should be signed by a Commissioned Medical Officer belonging to an all India Service or by an officer in charge of a Civil Station (i.e. Civil Surgeon). A certificate signed by a Medical Officer in charge of a Civil Hospital is not sufficient unless the officer comes within one of the above categories. Marks of identification should be caused to be entered by the

medical officer granting the certificate. If the eye sight is defective the medical officer granting the certificate should be requested to quote the paragraph noted on reverse.

### **AGE CERTIFICATE**

It should be signed by the officer named in the form. Name of school from the records of which the date of birth has been entered should be given in the place provided for it. Date of birth should be written and not the word 'correct' etc.

### **STATEMENT OF AGE EDUCATION, ETC**

It should be carefully completed. In column 3 place of domicile of father or if father deceased that of the guardian should be filled in. Particulars of father as required in column 5 should be filled fully. If father is deceased full particulars of guardian should be filled in and the fact of the father's death should be stated. It should generally be signed by the Head Master or the Principal and place and date to be written in the left hand side. One of the certificates at bottom to be crossed out and the other initialled where permanent address is required. Permanent address should be given and not a temporary one.

### **DOMICILE**

In order to obviate lengthy correspondence all claims to United Provinces domicile should be supported by a certificate from the District Magistrate in the enclosed form. All corrections in the form should be got initialled by the District Magistrate.

## APPENDICES

---

*Forms required to accompany a candidate's application for admission to the Thomason College, Roorkee, are shown below -*

- (1) Moral certificate
- (2) Educational certificate \*
- (3) Medical certificate on the form prescribed
- (4) A certificate of the recorded date of birth
- (5) Declaration as Statutory Native of India in case of other than pure Indians not included in the circular and may be asked for when required
- (6) Statement showing age, education, etc of candidate
- (7) Domicile certificate (only for U P students)

---

\* Copies properly certified by a Government gazetted officer only will be accepted

## FORM No 1

Moral Certificate required from candidates for admission to the Entrance Examinations of Civil Engineer Class of the Thomason College, Roorkee.

Certified that \_\_\_\_\_ bears a good moral character and has done so for the last two years.

STATION \_\_\_\_\_ Signature and designation of Instructor  
Date \_\_\_\_\_ to under whom educated, or  
superior under whom employed  
or brought up

## FORM No 2

Copy of Educational Certificate to accompany application of  
candidate for admission to the Thomason College,  
Roorkee.

Verified.

(Signature of any gazetted officer of Government)

## FORM No 3

Medical Certificate to accompany application of candidate for admission to the Thomason College, Roorkee.

I CERTIFY that I have carefully examined \_\_\_\_\_, that his eye sight is of the standard prescribed,\* that he is fairly robust, and his constitution is sound, and that he has no disease bodily or mental infirmity unfitting him now or likely to unfit him in the future, for active out door service in the Public Works Department

Designation\_\_\_\_\_

N B—The above certificate must be signed by a Commissioned Medical Officer or by a Medical Officer in charge of a Civil Station within a month before date of submission and must include a description giving clearly the personal marks of identification of the Candidate who has been medically examined. No other certificate will be accepted nor will application be entertained unless the above rules be strictly complied with

\*Please quote the no of para if the eye sight of the Candidate is according to one of the prescribed paras on reverse

## Standard of eye-sight required for admission to the Department of Public Works of India.

1. If myopia in one or both eyes exists, a candidate may be passed, provided the ametropia does not exceed 3.5 D, and if, with correcting glasses not exceeding 3.5 D, the acuteness of vision in one eye equals  $\frac{6}{9}$ , and in the other  $\frac{6}{6}$  there being normal range of accommodation with the glasses

2. Myopic astigmatism does not disqualify a candidate provided the lens or the combined spherical and cylindrical lenses required to correct the error of refraction, does not exceed 3.5 D, the acuteness of vision in one eye, when corrected, being equal to  $\frac{6}{9}$ , and in the other  $\frac{6}{6}$ , together with normal range of accommodation with the correcting glasses, there being no evidence of progressive disease in the choroid or retina

3. A Candidate having total hypermetropia not exceeding 4 D is not disqualified provided the sight in one eye (when under the influence of atropine) equals  $\frac{6}{9}$ , and in the other equals  $\frac{6}{6}$ , and with + 4 D glasses or any lower power

4. Hypermetropic astigmatism does not disqualify, provided the lens or combined lenses required to cover the error of refraction do not exceed 4 D, and that the sight of one eye equals  $\frac{6}{6}$  and the other  $\frac{6}{6}$ , with or without such lens or lenses

5. A Candidate having a defect of vision arising from nebula of the cornea is disqualified if the sight of one eye be less than  $\frac{6}{12}$ . In such a case the better eye must be emmetropic. Defects of vision arising from pathological or other changes in the deeper structures of either eye, which are not referred to in these rules, may exclude a Candidate

6. A Candidate is disqualified if he be unable to distinguish the principal colours (achromatopsia)

7. Paralysis of one or more of the exterior muscles of eyeball disqualifies a Candidate for it

---

**THOMASON COLLEGE OF CIVIL ENGINEERING.  
ROORKEE.**

---

*These rules apply to admissions in 1943 and until further notice*

---

**OVERSEER CLASS**

1 The Overseer Class has been constituted at the College to meet the requirements of the Subordinate Engineering Service of the Public Works Department of the United Provinces and of the public demands for a class of men trained as overseers

2 Candidates for admission to this class must not be under 16 or above 21 years of age on June 1 immediately preceding the entrance examination in which they wish to appear

Overage candidates are allowed to sit for the competitive entrance examination provided they are not over 25 years of age on June 1 immediately preceding the entrance examina

The name and age of a candidate will be taken from the certificate granted by the Board of High School and Intermediate Education or University as the case may be. No alteration in them will be recognized except in the case of purely clerical errors.

3 The class is intended primarily for Europeans, Anglo-Indians and Indians residents within the United Provinces excluding States within it. Extra-provincial candidates will be admitted only if vacancies remain after the admission of the United Provinces candidates. An annual contribution is charged for extra-provincial candidates. This contribution is based on the actual expenditure of the preceding financial year and will be intimated by the Principal on inquiry being made to him. Where a candidate is willing to bear this contribution himself, the application for permission to appear in the admission examination may be submitted direct to the Principal, otherwise it should be submitted through the Government of the Province or State in which the candidate resides. The Government or State forwarding such an application should clearly state that in the event of the candidate obtaining in the examination a place which entitles him to admission the Government or State concerned will be willing to pay the above contribution. The United Provinces Government may, in special cases, waive this contribution.

4 Applications for admission should reach the Principal, complete in all respects, not later than May 1, nor before February 1, preceding the entrance examination accompanied by a statement of—

The date of birth of the candidate.

---

NOTE.—Since Government departments in the United Provinces demand a domicile certificate signed by the District Magistrate before over-seers are appointed guardians are advised to furnish this certificate with the application. This will obviate further correspondence and possible rejection of the application.

The school or schools at which he has been educated

The profession, situation, relationship and residence of his father or guardian

N.B.—Great care should be taken to ensure that forms are complete in every respect. Incomplete forms are liable to be rejected. Forms of application with instruction showing how they should be filled in may be detached from the circular when required.

5 Every candidate will be required to produce testimonials (copies properly certified by a Government gazetted officer will be accepted), which will not be returned, of good moral conduct signed by the instructor under whom he has been educated, or of some other superior under whom he may have been employed or brought up, and these testimonials should have reference especially to his conduct during the two years immediately preceding his application for admission

6 The qualifying tests for admission to the entrance examination will be the High School examination conducted by the Board of Education United Provinces or the School Leaving Certificate examination of this province or the Matriculation examination of the Allahabad University (or equivalent examination of other provinces at present recognized by the United Provinces Board of High and Intermediate Education for purposes of High School) The Senior Cambridge examination or the High School Final examination under the Code of Regulations for European schools in force in Bengal Bombay and Madras Presidencies, the United Provinces, Punjab or Central Provinces will also be recognized. Those candidates who have appeared for any of the examinations, noted as the qualifying tests, before the date of the College entrance examination, but the results of which have not been published before the last date for sub-

mission of their applications to the Principal, are allowed to sit provisionally for the College entrance examination. Such candidates must, however, furnish with their application forms a certificate signed by the Head of their school or College, stating that they have so appeared. Their marks will be excluded from the result sheet if the information of their passing the qualifying tests are not communicated before the publication of the results of this College.

7 The examination fee of Rs 10 should be deposited in any Government Treasury in United Provinces under head "XXVI—Education E General—Miscellaneous Civil Engineering College, Roorkee Examination Fee", through treasury chalang which are obtainable from the Treasury. The receipted treasury chalan must be attached to the application form. Fee by postal money orders will be acceptable from stations where there are no Government treasuries. Until the fee or the receipted Treasury chalan has been received by the Principal the candidate's application will not be registered. In no circumstances will this fee be refunded.

8 A medical certificate must be furnished on the prescribed printed form enclosed in the circular, no other will be accepted. Students of the Draftsman class, when appearing for the Entrance examination of this class need not submit a fresh medical certificate.

NOTE—The fee prescribed by Government for this examination is Rs 4 which must be paid by the candidate direct to the Civil Surgeon or the Commissioner Medical Officer prior to the examination.

9 The candidate must be acquainted with both the English language and the modern Indian languages and able to speak, read and write them with tolerable ease and accuracy. He must pass an entrance examination in the following subjects, which will be held during the first week in June, at the following centres, viz, Roorkee, Agra, Lucknow, Allahabad and at any other centres, at the discretion of the Principal.

## SUBJECTS OF EXAMINATION AND MARKS

Paper No	Subject	Full marks	Qualifying Marks	Time allowed
1	"	75	42	2½ hours
1A	"	50		½ hour.
2	Modern Indian Languages Translation of extract in Nagri or Nastaliqui from any easy book and of easy English sentences into colloquial and grammatical questions	75	25	3 "
3	Arithmetic Candidates will be expected to be familiar with all the general arithmetical principles and able to	100	33	3 hours.
4	"			
5	equations Geometry and Mensuration Geo	100	33	3 "
6	"	100	33	3 "
	"	100	33	3 "

N B—One half of the total marks are required for passing

10 The entrance examination is competitive, and those who stand highest on the list of passed candidates (only to the number of available vacancies, which is for the present fixed at 40), will be selected for admission to the College. Provided the candidates pass the qualifying entrance examination, eight places will be reserved for Moslems, one for scheduled castes and one for other minority communities. Any

candidate who, after being duly notified, fails to join the College on the day fixed for the reopening of the session, or, who before that date fails to obtain from the College authorities definite permission to join on some later date, will forfeit his right to admission

11 No degree, certificate, etc., obtained by him at any other institution will entitle a candidate to enter the College, nor will it exempt him, in whole or in part from the entrance examination above detailed

12 Each examination is complete in itself, and no credit for marks gained in one examination is carried on to any other examination. A candidate who has failed in, or withdrawn from, an examination after his name has been registered, and presents himself for examination on a subsequent occasion, must undergo the full examination and furnish a fresh fee and certificates. No replies will be given to any telegram or letter enquiring the results of the entrance examination. A copy of the printed result will be sent to each candidate when published

13 In this class a College fee of Rs 6 a month during the session will be charged to students admitted through the entrance examination. All students of this class will be provided with unfurnished quarters in the College hostels at a monthly rent of Re 1, but no member of a student's family is allowed to reside in them with him

The hostels have been electrified, the charges for current being annas four per unit. Students must provide their own fans

14 There will be 8 scholarships of the value of Rs.25 per mensem, each tenable for the nine months of the College-session, awarded annually on the results of the entrance examination and on the first year's work and examinations.

out of which one is reserved in each of the 2 years for a student from the scheduled castes. All scholarships are reserved for United Provinces candidates.

\* 15 Each student will make his own arrangements for the purchase of the necessary class books and instruments. The probable expenses are shown in the appendices. No one should present himself for admission who is not prepared to meet all charges as well as those of feeding himself, and dressing in decent and clean apparel.

16 Any student failing to pay his College dues,\* or to make sufficient progress in study, or whose conduct is unsatisfactory, will be suspended or ultimately removed from the College. The parent or guardian of any student so suspended, or removed shall be held responsible for the payment of any debts whatsoever which may have been contracted while the student was in the College. Although every precaution is taken to prevent students from running into debt, the College authorities are in no way to be considered responsible for such debt.

17 The course is of two years duration. The College session commences on or about October 16, and ends on July 15, following. Examinations are held at the end of the first and second sessions. Any student failing to attain the standard prescribed in these two examinations will be allowed to repeat his course provided his stay in the College does not exceed three years. Such a student will not be eligible for

---

NOTE—\*The words College dues include—

- (i) College fee
- (ii) Rent and conservancy
- (iii) Rent of College furniture
- (iv) Electric Current charges
- (v) Recreation fund subscription and cost of articles purchased from recreation stores
- (vi) All dues in connexion with Overseer Class Club
- (vii) All dues of College Dairy, College shoemaker, College shop-keeper, College tailor, College sweet seller and College stores.

academic prizes, Government scholarships or guaranteed appointments

Failures, due to prolonged absence through sickness or other circumstances beyond the student's control will be considered and decided upon the merits of the case

For admission to the second year a student has to obtain at least 33 per cent of the marks allotted to each group and 45 per cent of the grand total. At the close of the second session the final examination will be held and a student is required to obtain 33 per cent in each group and 45 per cent. in the aggregate

18 The College vacation will be from July 15 to October 16 or thereabouts. Students will not be allowed to stay in the College hostels during the vacation

19 Upon successful completion of the course two classes of certificates are awarded as follows

I. The Higher Certificate, awarded to students obtaining at least 45 per cent in each group and 60 per cent of the total marks

II The Ordinary Certificate, awarded to students obtaining at least 33 per cent in each group and 45 per cent of the total marks

20 Every endeavour will be made to give unpaid practical training to all the United Provinces students but no guarantee in this respect can be given

21 The list of the text books, etc., used in the class, is given on pages 117 and 118. The prices quoted are approximate. Books are available at the Book Depot in the College

22 Drawing instruments, drawing boards, T squares, etc., are procurable in the bazar. Every student must provide himself with these at his own cost

23 Any student who is expelled from the College for misconduct will not be allowed to appear in any examination conducted by the College

24 It is desirable that every student should be able to swim before joining the College

25 Students will not be permitted to appear for any external examinations during their College course

26 All students have to be in possession of the booklets of Standing Orders and Course of Study. A plea of ignorance for the breach of any of the former is not accepted. A copy of each of these booklets will be issued to each new student on arrival and the cost recovered in his first bill. Students therefore should not provide themselves with out of date copies.

Any student requiring an extra copy of the Course of Study may obtain it on payment from the Assistant Superintendent, Government Press Roorkee Branch, Roorkee.

## Memorandum of the Expenses of Students of the Overseer Class

---

The following information is published for the guidance of parents and guardians, and for their assistance in determining the probable expenses of a course of instruction at the College

Economical management is aided as far as possible by the College authorities

It must be clearly understood that students cannot be permitted to remain in the College if their dues\* of any kind are not paid promptly on demand

The probable expenses of a student while at the College are shown under two heads, viz (i) the initial expenses of each yearly term, and (ii) the monthly current expenses

### Details of Expenses

Each student upon first joining the College and at the commencement of the second year has to incur certain

---

\*NOTE—The words College dues include

- (i) College fees
- (ii) Rent and conservancy
- (iii) Rent of College furniture
- (iv) Electric current charges
- (v) Recreation fund subscription and cost of articles purchased from recreation stores
- (vi) All dues in connexion with Overseer Class Club
- (vii) All dues of College Dairy College shoe maker College shop keeper, College tailor, College sweet seller and College stores

non recurring expenses The details of these with approximate costs, as far as it is possible to give them, are stated below Every student has to have certain text books of his own for each year's work These books are obtainable at the College Book Depot at prices  $12\frac{1}{2}$  per cent lower than published prices The costs quoted take this into consideration The lists of these books are given on pages 117 118

**Notes for the guidance of candidates when filling in application forms for Entrance Examination for classes in the Thomason College.**

*General*

**IMPORTANCE.**

It is impressed upon candidates that failure to observe these instructions implicitly must result in prolonged correspondence and possibly the rejection of the application. All forms when sent to this College should be pinned together. All forms must be kept clean

**NAME OF CANDIDATE.**

The full name of the candidate *and not initials* must be shown on all papers, and it is important to note that only the name as entered in the educational certificate must be used. Spelling of name should be the same in all the forms as are in the educational certificate or, as will appear in the gazette in case of provisional candidates. No additions to or omissions from that name will be permitted. In the case of Europeans or Anglo Indians the production of a birth or baptismal certificate in support of additional Christian or surname will not be recognized

**DATE OF BIRTH.**

The date of birth as entered in the application forms must be same as that entered in the educational certificate which must be certified. The production of a birth certificate or horoscope will not be accepted as proof for any change from the date given in educational certificate

**GENERAL.**

Separate forms should be filled in for each Examination i.e. for Civil Engineer, Overseer or Draftsman classes.

*Particular***MORAL CHARACTER CERTIFICATE.**

It should generally be signed by the Head Master or the Principal of the institution in which the candidate has studied, failing this by a gazetted officer other than the relation of the candidate. The words "last two years" should be crossed out only when the candidate has been in two institutions in which case two separate certificates should be obtained and furnished. These should relate to the period he has been in each institution and the period should be stated.

**EDUCATIONAL CERTIFICATE.**

A word to word copy of the Intermediate Examination certificate in case of Civil Engineer class and the High School Examination in the case of the Overseer class candidates verified by a government gazetted officer should be furnished. If the candidate has only appeared at the Examination a certificate from the Principal or the Head Master stating that he has appeared at the Intermediate Examination or the High School Examination showing the year in which he has appeared should be furnished. The result of such examinations should be communicated to the Principal as soon as they are published. Full designation of the verifying officer and the date on which he verifies the certificate should be given under his signatures.

**MEDICAL CERTIFICATE.**

It should be signed by a Commissioned Medical Officer belonging to an all India Service or by an officer in charge of a Civil Station (i.e. Civil Surgeon). A certificate signed by a Medical Officer in charge of a Civil Hospital is not sufficient unless the officer comes within one of the above categories. Marks of identification should be caused to be entered by the medical officer granting the certificate.

If the eye sight is defective the Medical Officer granting the certificate should be requested to quote the paragraph noted on reverse

### AGE CERTIFICATE.

It should be signed by the officers named in the form. Name of school from the records of which the date of birth has been entered should be given in the place provided for it. Date of birth should be written and not the word "correct" etc

### STATEMENT OF AGE, EDUCATION, ETC.

It should be carefully completed. In column 3 place of domicile of father or if father deceased that of the guardian should be filled in Particulars of father as required in column 5 should be filled fully If father is deceased full Particulars of guardian should be filled in and the fact of the father's death should be stated It should generally be signed by the Head Master or the Principal and place and date to be written in the left hand side One of the certificates at bottom to be crossed out and the other initialed

Where permanent address is required, permanent address should be given and not a temporary one

### DOMICILE.

In order to obviate lengthy correspondence all claims to United Provinces domicile should be supported by a certificate from the District Magistrate in the enclosed form. All corrections in the form should be got initialed by the District Magistrate

No other certificate will be accepted nor will application be entertained unless the above rules be strictly complied with.

\*Please quote the no. of para. if the eye sight of the Candidate is according to one of the prescribed para's on reverse

## Standard of eye-sight required for admission to the Department of Public Works of India

1 If myopia in one or both eyes exist, a candidate may be passed, provided the ametropia does not exceed 3.5 D, and if, with correcting glasses not exceeding 3.5 D, the acuteness of vision in one eye equals  $\frac{6}{9}$ , and in the other  $\frac{6}{6}$ , there being normal range of accommodation with the glasses

2 Myopic astigmatism does not disqualify a candidate provided the lens or the combined spherical and cylindrical lenses required to correct the error of refraction, does not exceed 3.5 D the acuteness of vision in one eye when corrected being equal to  $\frac{6}{9}$ , and in the other  $\frac{6}{6}$ , together with normal range of accommodation with the correcting glasses, there being no evidence of progressive disease in the choroid or retina

3 A Candidate having total hypermetropia not exceeding 4 D is not disqualified provided the sight in one eye (when under the influence of atropine) equals  $\frac{6}{9}$  and in the other equals  $\frac{6}{6}$ , and with + 4 D glasses or any lower power

4 Hypermetropic astigmatism does not disqualify, provided the lens or combined lenses required to cover the error of refraction, do not exceed 4 D, and that the sight of one eye equals  $\frac{6}{9}$ , and the other  $\frac{6}{6}$  with or without such lens or lenses

5 A Candidate having a defect of vision arising from nebula of the cornea is disqualified if the sight of one eye be less than  $\frac{6}{12}$ . In such a case the better eye must be emmetropic. Defects of vision arising from pathological or other changes in the deeper structures of either eye which are not referred to in these rules, may exclude a Candidate

6 A Candidate is disqualified if he be unable to distinguish the principal colours (achromatopsia)

7 Paralysis of one or more of the exterior muscles of the eyeball disqualifies a Candidate for it

## [ C I R C U L A R ]

# THOMASON COLLEGE OF CIVIL ENGINEERING, ROORKEE.

1942

*These rules apply to admissions in 1943 and until further notice*

## DRAFTSMAN CLASS

1 For admission to the Draftsman Class an entrance examination will be held annually at the Thomason College during the first week of June. Applications for admission must be submitted to the Principal not later than May 1, nor before February 1 preceding. The subjects for the examination will be (1) Arithmetic, (2) English, (3) the preparation of simple drawing scales and italic printing and (4) Geometry and very simple Mensuration. The maximum marks for each subject are 100. The standard in these subjects (except Drawing) will be that of the upper middle section of a Recognized Anglo Vernacular School. The first ten on the list of passed candidates will be selected annually for admission to the Draftsman Class. No entrance fee will be charged for the examination. Indians of

pure Asiatic descent, whose domicile is the United Provinces excluding States within the United Provinces are only eligible for admission to the class. One third of the marks in each subject and one-half of the total marks are required for passing.

2 Candidates for admission to the Draftsman Class must not be under 15 or above 21 years of age on June 1, immediately preceding the entrance examination in which they wish to appear.

3 The minimum qualifying test for permission to appear for the entrance examination *will be a pass in the Upper Middle Section of a Recognized Anglo Vernacular School.* Candidates must submit a certificate signed by the Head Master of the school in which they have been educated, showing that they possess the minimum educational qualifications and are of good character, industrious and have an aptitude for Drawing.

4 All candidates must furnish a certificate of sound health and physical fitness on the prescribed printed form enclosed in the circular. No other form will be accepted.

**NOTE**—The fee prescribed by Government for this examination is Rs 4 which must be paid by the candidate direct to the Civil Surgeon or the Commissioned Medical Officer prior to the examination.

Forms of application with instructions showing how they should be filled in may be detached from the circular when required.

5 The entrance examination will take place at the same time as the entrance examinations for other classes in the College and accepted candidates should present themselves for the entrance examination on the date which will be notified to them; all are required to be present on that date, otherwise they will forfeit the right of admission. Their admission will depend on the results of the examination and they should

join the class on October 16 or on the date notified to them

6. Full discretion rests with the Principal to remove any student who appears to be unlikely to profit by the training. A removal under this rule will imply no reflection on the student's character

7. The College session for the Draftsman Class commences on October 16 each year or thereabouts and ends on July 15 in the following year

8. Candidates will pay no fees and will be provided with free quarters, if available, but no member of a candidate's family will be allowed to reside in them with him

9. No stipends will be given, but not more than twelve scholarships of Rs 4 per mensem are available and shall be awarded to the top four students in each session of the Draftsman Class who are eligible and are of United Provinces domiciles and that if there be any session's class in which the number of United Provinces eligible students is less than four the unawarded scholarships shall lapse to Government. No scholarship will be payable while a student is on leave or during the vacation. Out of the above scholarships three are reserved for students from the scheduled castes one in each year tenable during the College Session

10. Instruments and materials will be supplied free for the use of students but remain the property of the College, and all work turned out during working hours will also be the property of the College

11. On completion of the course of training students will be granted a certificate as 'Draftsman,' with "qualified in Simple Estimating," in the case of those students only who attain the requisite standard in the subject. The course of training for the Draftsman Class will extend over three years,

but any candidate who gains admission, and, in the opinion of the Principal is initially a good draftsman, may be allowed to join the second year class. The College does not undertake to find employment for successful students, though it will give all the assistance it can. Certificate holders are expected to find employment for themselves in the open market.

12 Any student who is expelled from the College for misconduct will not be allowed to appear in any examination conducted by the College.

13 All students have to be in possession of the booklets of Standing Orders and Course of Study. A plea of ignorance for the breach of any of the former is not accepted. A copy of each of these booklets will be issued to each new student at arrival and the cost recovered in his first bill. Students therefore should not provide themselves with out of date copies.

## FORM No 4

Since seats are reserved in the Civil Engineer, and Overseer classes for United Provinces candidates of the minority communities which include depressed classes also, it would be in the interest of the candidates if they gave their caste prominently should they belong to any noted on reverse of the form

Statement of Age Education etc, to accompany application for admission to the \_\_\_\_\_ Class of the Thomason College Roorkee

Name of candidate	Date of birth as furnished to the highest institution of the last three— (1) University (2) College (3) School	Improvement of domicile of the father, and if father not living of guardian where he must have definitely settled and resided for a period of three years	School or College at which educated	Name, profession, situation residence and caste of father or of father not living of guardian, showing relationship of latter to candidate	Caste selected in case of candidate of United Provinces for the C E Class	Remarks

I am willing to be vaccinated on admission

Place \_\_\_\_\_

Date \_\_\_\_\_

Signature of candidate

Signature of Head Master or forwarding Officer

Permanent address

CIVIL ENGINEER CLASS  
1911 '9

## COURSE OF STUDY AND SYLLABUS

---

### CIVIL ENGINEER CLASS, 1942-43.

---

THE chief points kept in view in arranging this course of study are, to ensure the necessity for steady work throughout the whole course and to co ordinate the instruction given in each subject so as to lead up to a thorough test of the qualifications necessary for a Civil Engineer of as high a grade as a college training can produce, special attention being paid to the local conditions of India. This test is represented by the Project and the Final Examinations.

Four-tenths of the total marks at the end of the 1st year are carried forward in each group to the 2nd year. Similarly, seven tenths of the total marks at the end of the 2nd year are carried forward to the 3rd year. Continuous steady work is necessary to ensure qualification at the end of each year.

### TERMS AND EXAMINATIONS.

#### First Term—

*College Attendances* —From October 16 to a variable date in February

*Mid-Sessional Examinations* —For students of all the 3 years start in the last week of January

## Second Term—

*College Attendance.*—Start on the Monday following the Mid-Sessional Examinations and continue till about the first Saturday in June.

*Revision in Quarters.*—During Entrance Examinations

*Final Examinations.*—Start in the last week of March.

The Course of Study extends over three years and comprises the following subjects grouped under seven heads :—

Group I	.. Mathematics
" II	.. General Civil Engineering
" III	.. Special Civil Engineering.
" IV	.. Applied Science.
" V	.. Mechanical and Electrical Engineering.
" VI	.. Projects
" VII	.. Physique and General Fitness

The marks each student has to obtain to qualify for admission to the second and third year, and to obtain the College Diploma in Civil Engineering, awarded upon completion of his third year are as follows :—

(a) For admission to the second year, the first-year students are required to obtain 33 per cent. of the marks allotted to each Sub-Group for written examinations and practical work respectively and 50 per cent. of the total marks.

(b) To return to the College at the end of the second year the students are required to obtain 33 per cent. of the marks allotted to each Sub-Group for written examinations and practical work respectively in that year (i.e. in the second year); and 50 per cent. of the total marks for the two years, i.e. of the full marks for the second year together with the reduced marks of the first year.

- (c) To pass out of the College at the end of the third year, the students are required to obtain 33 per cent of the marks allotted to each Sub Group for written examination and practical work respectively in that year (i.e. the third year), and 50 per cent of the total marks for the three years i.e. of the full marks for the third year together with the reduced marks for the first and second years
- (d) The Ordinary Diploma is awarded to students who qualify as above and obtain less than 66 per cent of the total marks

The Honours Diploma is awarded to students who qualify as above and obtain 66 per cent or more of the total marks

Students who fail in any year will be allowed to repeat their course provided their stay in the College does not exceed four years on condition that such a student will not be eligible for academic prizes, scholarships or guaranteed appointments

Cases of failures due to prolonged absence through sickness or circumstances beyond the students control will be considered and decided upon their merits

The Examinations and the marks assigned to them, are shown on the following pages

## EXAMINATION AND MARKS

## THEORETICAL

(1st term)		(2nd term)	
	Marks		Marks
Strength of Materials	50	Strength of Materials	100
Mathematics	50	Mathematics	75
Mechanics	50	Mechanics	100
Building Construction	50	Graphic Statics	50
Physics	75	Building Construction	100
Chemistry	75	Drawing	100
Mechanical Engineering		Physics	75
(Prime Movers)	50	Chemistry	75
Survey	50	Mechanical Engineering	
		(Prime Movers and Theory	
		of Machines)	100
		Communications	100
	<hr/> 450 <hr/>		<hr/> 575 <hr/>

## PRACTICAL

Mechanics Laboratory	50	Mechanics Tutorial	50
Levelling	50	Physics Practical Examination	100
		Chemistry	100

## Group I.—MATHEMATICS.

- (i) Plane Co-ordinate Geometry.
- (ii) Solid Geometry
- (iii) Calculus
- (iv) Differential Equations
- (v) Mechanics
- (vi) Graphics

---

### MATHEMATICS.

*(First Term—3½ hours weekly)*

**Plane Co-ordinate Geometry.**—Equations of straight lines and circles; simple properties of conics equations of the second degree

**Calculus.**—Limits, derivatives, standard forms, rules for differentiation, successive differentiation, differentials and small errors, signs of the derivative, mean value theorem; extrema for functions of one variable Integration as inverse of differentiation, standard forms simpler methods of integration

---

*(Second Term—2½ hours weekly)*

**Elementary Solid Geometry.**—Simple relations of planes; straight lines and spheres elementary treatment of simple surfaces of revolution

**Calculus.**—Partial and total differentiation Elementary definite integrals Application of the derivative to plane curves referred to rectangular and polar coordinates; intersection of lines and curves; tangents; normals; asymptotes; points of inflections, tracing of sum ' ———

*(Third Term—2 hours weekly)*

**Calculus.**—Definite integrals (continued), quadrature and rectification of curves, intrinsic equations, volumes and surface areas of solids of revolution Approximate integration Simpson's rule

**Elementary Differential Equations.**—Formation, equations of the first order and first degree, integrating factors

*(Fourth Term—1 hour weekly)*

Linear differential equations of the first order, Clairaut's form Linear differential equations with constant coefficients, particular integrals and their determination in simple cases Some simple applications

## MECHANICS

*(First Term—5 hours weekly)*

**Statics** —Coplanar forces acting on a rigid body, moment of forces, friction, conditions of equilibrium, centres of gravity

**Graphical Methods.**—Triangle and polygon of forces, funicular polygons, stresses in just rigid and pin joined frames

**Dynamics.**—Relative velocities, tangential and normal velocities and accelerations, simple harmonic motion

**Mechanics Laboratory.**—Work in the Mechanics laboratory is an integral part of the course The experiments are designed to illustrate the principles of elementary mechanics to give practice in the use of apparatus and in accurate measurement

*(Second Term—3 hours weekly)*

**Statics.**—Work, principle of virtual work; deflections of just rigid and pin joined frames; displacement diagrams and Mohr's rotation or correction diagrams

**Hydrostatics.**—Static pressure and static head, gauge and absolute pressure, units, total hydrostatic pressure on immersed surfaces, centres of pressure of plane areas, conditions of equilibrium of floating bodies metacentric heights

**Dynamics**—Laws of motion, angular momentum, moments of inertia

---

*(Third Term—2 hours weekly)*

**Dynamics.**—Equations of motion, principles of energy and momentum, motion along a curve, motion about a fixed axis Impulsive motion

---

*(Fourth Term—2 hours weekly)*

Simple problems in forces in three dimensions Lagrangean equations and allied problems

Stability of systems with one degree of freedom flexible chains Motion in resisting media Vibrations of systems having one degree of freedom including vibrations of beams whirling of shafts vibrations due to torsion etc etc

## Group II.—GENERAL CIVIL ENGINEERING.

- (i) Strength of Materials
- (ii) Theory of Structures
- (iii) Design of Structures
- (iv) Theory and Design of Reinforced Concrete
- (v) Building Construction
- (vi) Drawing
- (vii) Engineering Specifications and Quantities

---

### STRENGTH OF MATERIALS.

*(First Term—1½ hours weekly)*

Physical properties of the common materials used in Engineering Relation of stress and strain, stress—strain diagrams; Young's modulus, complementary shear stress, modulus of rigidity, extension and lateral contraction, Poisson's ratio, composite bars, temperature stresses Stresses in cylindrical and spherical shells Resilience Stresses due to suddenly applied loads

---

*(Second Term—2 hours weekly)*

Principal and combined stresses Relation between elastic constants Euler-Bernoulli Theory of bending of straight beams Distribution of shear stress in beams Torsion of circular shafts Stress and deflection of close coiled helical springs

Graphical and analytical methods for calculating bending moments and shearing forces due to dead loads in statically determinate beams

---

*(Third Term—2 hours weekly)*

Curvature, slope and deflection of simply supported beams and cantilevers graphical methods and deflection curves; simple theory of struts subject to axial and eccentric loads, empirical strut formulae

**Testing Laboratory.**—Phenomena in tests to destruction in tension, compression, shear and torsion Leuder lines; elastic limit, ultimate strength, ductility Forms of test pieces and devices for holding them, influence on strength and percentage extension Testing machines and instruments Methods employed for deducing most probable values of elastic constants from various tests Effect of hardening, tempering, annealing and over strain hardness and resistance to shock and their measurement, fluctuating and impact stresses, fatigue and fatigue tests Theories of strength

---

*(Fourth Term—1 hour weekly)*

Further problems in deflection of simply supported beams and struts, combined bending and direct stresses, eccentric loads, torsion combined with bending

---

**THEORY OF STRUCTURES.**

*(Third Term—3 hours weekly)*

Bending moments and shearing forces due to travelling loads in beams and plane frames Influence Lines Theory of riveted joints Theory of Earth pressure and foundations; stability of masonry and brickwork structures like retaining walls, gravity dams and arches

*(Fourth Term—1½ hours weekly)*

Bending moments, shearing forces, curvature, slope and deflection of encastre' and continuous beams Theory of hinged and rigid arches

---

*(Fifth Term—2 hours weekly)*

Strain energy analysis Theory of suspension bridges Theory of bents, struts with lateral loads and end moments Stresses in thick cylinders Further problems in the Theory and Design of Structures

---

## DESIGN OF STRUCTURES

*(Fourth Term—3 hours weekly)*

**Buildings —Roof Trusses —**Various types of trusses consideration of loads, wind pressure, Materials and coverings employed Determination of sizes of various members

**Foundations —**Methods for finding out the bearing capacity of soils Trial pits and borings Footings Grillage foundations

Masonry retaining walls Masonry and steel chimneys

Masonry and steel reservoirs

---

*(3 hours weekly)*

**Bridges —Preliminary —**Selection of site, Calculation of Waterway, Piers, Various types of foundations depth of scour, Protection works, Floor and curtain walls Various types of Temporary and Permanent Bridges

**Superstructures —**Consideration of loads impact wind pressure Masonry bridges and culverts Plate girder, types of floors

*(Fifth Term—3 hours weekly)*

**Buildings.**—Design of a redundant frame Influence line diagrams for fixed and continuous beams, three pinned parabolic, semi-elliptic and segmental arches

Design of a masonry and a R C dome

*(3 hours weekly)*

**Bridges.**—Lattice girder swing bridges, steel arched bridges, Lateral and sway bracings Suspension bridges

**THEORY AND DESIGN OF REINFORCED CONCRETE.**

*(Fourth Term—2 hours weekly)*

Nature, uses, properties, advantages and disadvantages of Reinforced Concrete over other types of construction Theory and design of rectangular and T beams with single reinforcement, simply supported Shear and diagonal tension shear reinforcement Bond Slabs simply supported Columns axially loaded

*(Fifth Term—4 hours weekly)*

Doubly reinforced beams continuous beams Slabs continuous on two and four sides Combined bending and direct stresses

Design of slab and beam floors, columns eccentrically loaded Rigid frames Column footings combined footings piles, reinforced concrete pipes, rafts Retaining walls Reservoirs Investigation of stresses in reinforced concrete arches Reinforced brickwork, design of beams, floors and walls Details of construction of Reinforced Concrete and Reinforced brickwork, centering, shuttering and laying.

*(Fourth Term—1½ hours weekly)*

Bending moments, shearing forces, curvature, slope and deflection of encastre and continuous beams Theory of hinged and rigid arches

---

*(Fifth Term—2 hours weekly)*

Strain energy analysis Theory of suspension bridges Theory of bents, struts with lateral loads and end moments Stresses in thick cylinders Further problems in the Theory and Design of Structures

---

## DESIGN OF STRUCTURES

*(Fourth Term—3 hours weekly)*

**Buildings.**—Roof Trusses —Various types of trusses, consideration of loads, wind pressure, Materials and coverings employed Determination of sizes of various members

**Foundations.**—Methods for finding out the bearing capacity of soils Trial pits and borings Footings, Grillage foundations

Masonry retaining walls Masonry and steel chimneys

Masonry and steel reservoirs

---

*(3 hours weekly)*

**Bridges.**—Preliminary —Selection of site, Calculation of Waterway, Piers, Various types of foundations, depth of scour, Protection works, Floor and abutment walls Various types of Temporary and Permanent Bridges

**Superstructures.**—Consideration of loads impact, wind pressure, Masonry bridges and culverts, Plate girder, types of floors

*(Fifth Term—3 hours weekly)*

Buildings —Design of a redundant frame Influence line diagrams for fixed and continuous beams three pinned parabolic semi-elliptic and segmental arches

Design of a masonry and a R C dome

*(3 hours weekly)*

Bridges —Lattice girder swing bridges steel arched bridges Lateral and sway bracings Suspension bridges

**THEORY AND DESIGN OF REINFORCED CONCRETE***(Fourth Term—2 hours weekly)*

Nature uses properties advantages and disadvantages of Reinforced Concrete over other types of construction Theory and design of rectangular and T beams with single reinforcement simply supported Shear and diagonal tension shear reinforcement Bond Slabs simply supported Columns axially loaded

*(Fifth Term—4 hours weekly)*

Doubly reinforced beams continuous beams Slabs continuous on two and four sides Combined bending and direct stresses

Design of slab and beam floors columns eccentrically loaded Rigid frames Column footings combined footings piles reinforced concrete pipes rafts Retaining walls Reservoirs Investigation of stresses in reinforced concrete arches Reinforced brickwork design of beams floors and walls Details of construction of Reinforced Concrete and Reinforced brickwork centering shuttering and laying

## BUILDING CONSTRUCTION.

(*First Term—2 hours per week*)

**Materials.**—**Stone**—Classification and varieties Characteristics Suitability for structures Quarrying, blasting and dressing

**Bricks, tiles, firebricks and terra cotta**—Composition of earth Moulding, drying and burning Characteristics and essential features

**Lime and cement**—Methods employed in manufacture Essential features British standard specifications for cement

**Timber**—Growth and structure Felling, converting and seasoning Decay and methods of preservation Common defects Characteristics of timber commonly used in India

**Miscellaneous**—Preparation of mortars Mixing, laying and curing concrete Plastering and pointing White and colour washing Other building materials such as asbestos and galvanized iron sheets, slates lead, copper, brass, paints, varnishes, distempers, etc

**Masonry.**—**Stone masonry**—Definitions of terms in common use Ashlar, block-in-course and rubble masonry Precautions against settlement Arches

**Brick work**—General principles and precautions Bonds Arches

(*Second Term—2½ hours weekly*)

**Carpentry and Joinery.**—Joints and fastenings Beams Wooden floors, partitions, doors, windows, centres and staging

**Roofs and Floors**—**Timber**, steel and flat roofs Roof coverings of tiles, slabs, galvanized iron and asbestos sheets Brick, stone, tiled and concrete floors

**Miscellaneous**—Flues and chimneys Stairs and stair cases Painting and decorations Fire resisting and sound

proof construction. Heating and cooling of buildings. Electrical installations and lifts Lightning conductors

**Field Engineering.**—Use of spars Knots and lashings. Blocks and tackle Holdfasts, guys and winches Use and construction of derricks, gyps and trestles Gantries. Scaffolding shoring, underpinning and centering Ground, tracing Working plans for foundations on level and sloping ground Laying out buildings on the ground

---

## SURVEYING.

*(First Term—4 hours weekly)*

**Levelling.**—The use and adjustment of the level Different types of levels Levelling staves their types and markings Precautions required in levelling methods of booking and reductions of levels Comparative merits of reduction methods Definitions of terms used in levelling Sources of error Curvature and refraction effects Differential levelling Profile levelling Reciprocal levelling Allowable closing error The Abney level Boning rods

The students will do practical levelling in the fields

---

*(Second Term—1½ hours weekly)*

**Chain Surveying.**—Equipment Ranging and chaining lines Engineer's chain Gunter's chain Customary limits of error Reconnaissance Selection of Stations Keeping up the Field Book Obstacles to chaining and ranging, how overcome Offsets Optical square Plotting the Survey.

**Compass Survey.**—The Prismatic Compass, Constructional details and its uses Bearings and angles Magnetic and True meridian Obtaining meridian by sun's shadow. Variation of the compass Designation of bearings Comparative merits of whole circle and quadrantal reckoning.

Back bearings Local attraction Elimination of effects of local attraction Sources of error Limits of precision Adjustment of closing error

The student will prepare a Chain and Compass Survey plate of a small area

**The Theodolite**—Various parts, their uses and adjustments Measurements of horizontal and vertical angles Repeating angles changing faces Errors in its use and their elimination

---

*(Third Term—8 hours weekly)*

**Theodolite Traversing**—Definition of a Traverse Gale's Traverse system Conditions fulfilled in a closed traverse Methods of traversing by inward angles and by bearings Relative merits of these methods Computations for obtaining co-ordinates Closing error and its adjustment Bowditch's rule for adjustment Advantages of plotting by co-ordinates Precautions in plotting Omitted measurements and their calculations The subtense bar and its use

**Plane-Tabling**—Equipment for plane tabling Advantages and disadvantages Order of working methods of plane tabling Fixing of position The three point problem The two point problem Traversing with the plane table

**Contours and Contouring**—Representation of three dimensions Uses of contour plans and maps Contour lines Contour interval Characteristics of contours Methods of contouring Direct method Indirect methods Interpolation of contours

The students will prepare a plate employing the use of theodolite traverse, plane table and contours

**Minor Triangulation**—Grades of triangulation Length of base line Connection of base line to triangulation Selection of stations Reconnaissance Signals and brief descriptions Base line measurements and corrections applied to same Brief description of rigid and flexible base line measuring apparatus as used in Geodetic surveys Observation of angles Zero station Setting to Zero Change of zero Cautions observed in taking a round of angles Recording observations Intersected points Heights Computations Supplementary and satellite stations Completion of Traverse

At the end of the 3rd term students will be taken into camp for three weeks and do a minor triangulation and fill in details with the plane table using the Tangent clinometer for heights and contouring

---

*(Fourth Term—1 hour weekly)*

**Curves**—Designation of curves Elements of curves Different methods of setting out curves Simple and compound curves Vertical curves Transition curves Double centre method for laying down a straight line Setting out pegs for earthwork Application of curves to highways and railways

**Tacheometrical Surveying**—Stadia system Principle of Tacheometer Determination of constants Distance and elevation formulae Horizontal sights Inclined sights with staff vertical Internal focussing telescope in Tacheometry Instrumental constants Tangential system

---

*(Fifth Term—4 hours weekly)*

**Field Astronomy**—Introduction The earth as an astronomical body The celestial sphere Definitions Astronomical system of co-ordinates Spherical trigonometry

and formulae as required for practical astronomy Napier's rule of circular parts Use of the Nautical Almanac Time Sidereal, apparent and solar Equation of time Relation between mean and sidereal time Acceleration and retardation Relation between time and longitude Standard time

Time by ex meridian observations Time by meridian transit Time by equal altitudes of a star Time by altitude of the sun Corrections to observations

Azimuth Azimuth by ex meridian observations Azimuth by a circumpolar star at elongation Azimuth by Polaris, time and latitude being known Azimuth by observations to sun Convergency correction how applied

Latitude Determination of latitude by various methods Longitude Determination of longitude by various methods Sun dials Description and use How made.

**General Engineering Surveys**—Surveying requirements when preparing a project for a building, bridge, road, canal or railway

---

## DRAWING COURSE

*(First Term—5 hours weekly)*

Manipulation of Draftsman's instruments Lettering Mouldings Conventional signs Symbols and colours Colouring Projections Orthographic Isometric and Perspective Intersection of planes Interpenetration of solids Development of surface Drawing of simple details of buildings

---

*(Second Term—7 hours weekly)*

Drawing of building and engineering constructional details Taking measurements of actual buildings and drawing

plans, elevations, and sections of same Drawing plans elevations, Sections to  $\frac{1}{8}$ " scale from general specifications and freehand sketches

---

## ENGINEERING SPECIFICATIONS AND QUANTITIES.

*(Third Term—1½ hours per week)*

Taking off quantities required for engineering structures, abstracting and billhog Estimating quantities of earthwork in roads, canals, etc

---

*(Fourth Term—1½ hours per week)*

Plinth area and cubical contents estimates Analysis of rates for common items of construction General and detailed specifications

*Contract* —The preparation of tenders and the invitation for same Various kinds of contracts, and the documents required for each kind Preparation of running bills and final bills, measurement books and their use Completion plans.

### Group III.—SPECIAL CIVIL ENGINEERING.

- (i) Hydraulics
- (ii) Irrigation
- (iii) Water Supply
- (iv) Sanitary Engineering
- (v) Communications

---

#### HYDRAULICS.

*(Third Term—1½ hours weekly)*

**Irrigation** —Various modes of fluid motion Principle of continuity Velocity of discharge from small orifices Hydraulic head Coefficients of velocity, contraction and discharge Bernoulli's theorem Venturi meter Pitot tube Flow through large orifices, free and submerged Flow over rectangular, triangular and trapezoidal notches and weirs Velocity of approach Francis formula for weir Cippoletti Weir Broad Crested weir Flow under a variable head

Viscous and turbulent flow Critical velocity Rate of discharge under viscous flow Laws of fluid friction Coefficient of surface friction Hydraulic gradient Loss of head in pipes due to friction Secondary losses due to sudden enlargement, sudden contraction and other causes Discharge through mouth pieces Formulae for turbulent flow Parallel flow through pipes Transmission of power through pipes Nozzles Diameters of pipes for maximum kinetic energy of jets General formula for flow of water in open channels Channel Cross sections of greatest efficiency

*(Fourth Term—4 hours weekly)*

**Irrigation**—General theory of flow of water in open channels Uniform and non uniform flow Critical depth Chezy Bazin, Manning and Kutter formulae Application to design of canals and distributaries Silt transportation formulae and their application to design of regime channels Theory of scour as applied to rivers Flow through syphons Falls free and drowned Notches on falls Water cushions Afflux and back water curves Standing wave and its height Flood absorptive formulae in tanks Overflow Weirs. Modules Methods of gauging discharges in channels

**Power**—Utilization of water as a source of power Hydraulics of power plants from source of delivery to turbine.

**Water Supply.**—Darcy, Chezy, Bazin and Kutter formulae for turbulent flow under working conditions Limiting, mean and critical velocities Distribution of velocities in pipes and relation between diameter and discharge Economical diameter of pipe lines Initiation and stoppage of motion in a pipe Water hammer and surge chambers Losses at bends, elbows and tees Time of discharge through long pipe lines, branch mains, and multiple supply Flow through bye pass and pipes coupled in parallel Meters, syphons pitometer pumps, rams, air valves, relief valves, etc Calculation of compensation water Dimensional homogeneity and dynamical similarity

**Hydraulic Machines**—Pressure of jets on stationary and moving plates Pressure on curved vanes Work done by jets on moving blades Work done by reaction of jets Reciprocating, centrifugal and turbine pumps Pelton wheel Inward and outward flow turbines Impulse and reaction turbines Description of different types of turbines Determination of vane angles Efficiencies of turbine plant. Governing Rams Mills Hydraulic lifts and brakes

## IRRIGATION

*(Fourth Term—14 hours weekly)*

**Earthwork** —Definitions, stability and properties of soils  
Measurement and setting out Sections and volumes  
**Drainage** Puddling Consolidation Dressing and turfing  
Lift and Lead

**Irrigation** —Definition of irrigation Conditions necessitating its introduction Principal Indian crops their seasons and benefits derived from irrigation Depth of water required to ensure maturity

**Wells** —As a source of irrigation lined and unlined wells Sub soil water reservoirs Duty of wells Tube wells

**Canals** —Perennial canals Duty of canal water Depths and running days Supplies utilized and lost Silt and its effect on irrigation channels its prevention Kennedy channels Design of channels from Garrett's diagrams Evaporation absorption and percolation Rise in subsoil water level Water logging Lining of canals

Inundation canals general description and their special features Location of off take to avoid salting

---

*(Fifth Term—4 hours weekly)*

**Perennial canals** —Sources of supply General description of Indian rivers Location and design of headworks in boulder trough and delta stages of a river Description and general design of Headworks Weirs and Undersluices Head regulators Supply Channels Afflux bunds Temporary diversion bunds Various types of permanent weirs Drop shutters Automatic gates Stony sluice gates

**Design and Alignment of Canals** —Locating watersheds and aligning canals Falls Bridges Regulators Locks Escape Roads Distributaries and Minors Outlets

*Cross drainage works*—Maximum rate of run off from catchments    Inlets    Superpassages    Level Crossings  
Aqueducts    Syphon    Reservoirs

*River training works*—Spurs    Groynes    Bell bunds  
Mattresses    Aprons

*Storage Works*—Tanks    Total run off from catchments  
Flank Escapes    Outlets sluices    Reservoirs for storage of water  
Earthen dams    Theory and design of masonry dams and weirs  
Dams with discharge sluices    Syphon dams  
Escapes    Flood absorptive capacity of reservoirs

---

## WATER SUPPLY

(*Fourth Term—2 hours per week*)

*Water Supply*—History and development    Sources of supply  
Standard of purity for public water supplies    Quantity supplied *per capita*  
Intakes    Pumping and gravity schemes    Water towers  
Purification, Slow and rapid filtration    Sterilization  
Softening    Pipes, fittings and appurtenances  
Distribution of water    Detection and prevention of waste  
Metering    Rules for framing water supply schemes

---

(*Fifth Term—3 hours per week*)

*Sanitary Engineering*—*Sanitation*—Site and orientation of buildings  
Damp-proof courses    Ventilation    Air conditioning  
House drainage    Conservancy and water borne systems  
Sanitary appliances    Construction and testing of house drains  
Pail depots    Public latrines and urinals

Prevention of malaria incidental to engineering construction

*Sewerage*—Separate and combined systems    Forms cross sections, capacities and inclinations of sewers

Construction of sewers    Calculation of storm water    Storm water overflows    Lifts, ejectors and pumps for sewage    Manholes and lamp eyes    Flushing of sewers    Rules for the design of sewerage and drainage systems in India

*Sewage disposal* —Essentials in the treatment of sewage    Selection of site for disposal works    Disposal by dilution and land treatment    Simple sedimentation, chemical precipitation and bacterial tanks    Activated sludge process    Sludge disposal

*Refuse* —Collection and disposal of refuse

*Specifications* —Specifications for the construction of sanitary works

## COMMUNICATIONS.

(*Second Term*—2½ hours per week )

**Roads** —History and development    Alignment    Traffic census and cross sections    Gradients    Curves    Subsoils, under drainage    Soling and formation    Earth    *kankar* and stone roads    Temporary roads    Hill roads    Collection and tests for materials    Dust prevention    Bitumen, asphalt, tar and cement roads    Pavements    Wear and maintenance of roads    Road construction machinery    Preparation of road projects    Arboriculture

(*Third Term*—2½ hours per week )

**Railways** —History and development    Alignment    Preliminary investigations    Reconnaissance    Preliminary and location surveys    Grades    Cross sections in embankment and cutting    Curves    The gauge problem    Formation, ballast, sleepers, rails joints and fastenings    Points and

crossings Plate laying Railway bridges Level crossings  
Tunnels Station requirements and layout Wear of rails  
Creep of rails Mountain railways Maintenance of the  
permanent way Rules for preparation of railway projects.

## Group IV.—APPLIED SCIENCE.

- (i) Physics
- (ii) Engineering Chemistry
- (iii) Mineralogy and Geology

### PHYSICS.

*(First Term—3½ hours weekly)*

Electricity and Magnetism —Potential and capacity; condensers production and propagation of wireless waves; principles of wireless transmission and reception, receiving set Temperature coefficients, alloys and their uses, shunts, wheatstone method of measuring resistance, conditions for accuracy and sensitiveness, measurement of potential, current and resistance by potentiometer Back E M F, secondary cells, lead and alkaline Electric power and energy, relations between electrical, mechanical and heat units Application of heating effect to arc and incandescent lamps Magnetic lines of forces, electromagnetic relations C G S units Moving coil galvanometer, ammeter and voltmeter Magnetic circuit, magnetization of iron, measurement of permeability, hysteresis Electromagnetic induction coefficient of induction Lenz's and Fleming's laws

Heat —Scales of temperature, pyrometers, self recording devices, ready methods of finding expansion coefficients Precaution against expansion in engineering practice, applications of expansion Application of fusion Total heat of steam, moisture in steam and its determination Vapour pressure, hypsometer, flash point, storage of volatile liquids Heat insulating material and its testing Ventilation of buildings, draught in chimneys

(*Second Term—3 hours weekly*)

**Heat** (*continued*) —Radiation and laws of cooling    Laws of perfect gas    General thermodynamic principles and scale of temperature    Calorific value of fuels and its determination

**General** —Commercial forms of weighing machines, commercial methods of measuring density, hydrometers    Hydraulic press    Fortin barometer, aneroid as altimeter    Water and Air pumps    Pressure gauges

**Light** —Photometry, parabolic and cylindrical mirrors; totally reflecting prisms, prismatic and cylindrical lenses    Chromatic and spherical aberration, methods of minimising these    Sextant telescope, microscope, eye pieces, prism binoculars and range finders

**Sound.**—Reflection and absorption of sound, reverberation, acoustic demands in a room, reverberation time, treatment of acoustically bad rooms

## ENGINEERING CHEMISTRY.

(*First Term—3½ hours weekly*)

Colloids and their properties    Phase rule and its application    Water, its natural sources, suitability for various purposes    pollution and its effects, purification    Gypsum plasters    Plain and hydraulic limes    Cements, i.e. Normal and H.E.S. Portlands    Aluminous cements, etc. their composition, preparation and properties, setting and hardening of mortar and cements    Clay, effects of impurities, its various products i.e. porcelain, pottery and bricks, etc.    Decay of timber, methods used in preventing decay

A study of the following metals, i.e. copper, aluminium, lead, zinc, chromium, manganese and their more important compounds    Properties and composition of non ferrous alloys, i.e. white metals light metals, brass and bronze    Iron and

steel, their manufacture and properties, effects of impurities, corrosion of iron and steel, steel alloys, cooling curves, metallography Preservation of structural materials

---

*(Second Term—3½ hours weekly)*

Petroleum, its origin, composition, properties and uses  
 Bitumen and Asphalt Their composition, properties and uses  
 Coal, its distillation products and their uses Road tars, their composition, properties and uses Tests of tars and asphalt  
 Paints, Varnishes Preparation and use of commoo pigments

---

### **MINERALOGY AND GEOLOGY.**

*(Second Term—1 hour weekly)*

**Geology.**—Elementary discussion of the geological agents, their influence in effecting geological changes and the records left by them Simple description of the principles of structural geology Sedimentary and igneous rocks Use of fossils

*(Third Term—3 hours weekly)*

**Geology.**—Elementary discussion of the general principles of historical geology, including a brief description of the geological record of the history of the earth with a short discussion of the chief characteristics of the following divisions

- (1) Archæan
- (2) Palæozoic
- (3) Mesozoic
- (4) Tertiary
- (5) Post Tertiary

A short description of the stratigraphical geology of India

**Mineralogy.**—Crystal form and symmetry, division into systems with their principal characteristics, classification based upon (a) chemical composition, (b) physical properties, i.e. specific gravity, hardness, cleavage, fracture and phenomena relating to light Simple description and identification of rock forming minerals, ores, vein tones, salts and gems

## Group V.—MECHANICAL AND ELECTRICAL ENGINEERING.

- (i) Prime Movers
- (ii) Theory of Machines
- (iii) Machine Drawing
- (iv) Workshops
- (v) Electrical Technology

---

### MECHANICAL ENGINEERING (PRIME MOVERS)

*(First Term—2 hours weekly)*

Elementary treatment of the production and properties of metals

*Boilers* —Shell Firetube and Watertube types Boiler fittings

Boiler accessories Steam pipe lines

*Steam Engine* —Simple slide valve engine, engine details  
High speed engines, Indicators and Indicator diagrams condensing Engines, Superheating, Steam Jacketting, Compounding

---

*(Second Term—1 hour weekly)*

*Internal combustion Engines* —Four stroke, Two stroke, Oil engines, Petrol engines, Diesel engines

*Steam Turbines* —De Laval, Parsons Curtis

*Machine Tools* —Lathes Planing machines, Drilling machines, Milling Machines Universal Grinders Special tools

(Third Term—2 hours weekly)

*Thermodynamics*—Ideal cycles, Entropy; Entropy diagrams, Compressors

*Steam Engine*—Theory, Compounding, Combustion, Heat Transmission, Mollier diagrams, Superheating, Steam Jacketting Testing

---

(Fourth Term—2 hours weekly)

*Internal combustion Engines*—Principles of working; Effect of compression, Strength of mixture, Ignition, Fuels and their calorific value Testing of engines

---

(Fifth Term—2 hours weekly)

*Steam Turbines*—Flow of steam, Impact of steam; Classification of steam turbines, Determination of vane angles steam consumption, Effect of vacuum, superheat and initial pressure Balancing of end thrust, Bleeding Testing of turbines

*Refrigerating machinery* Principles of working, choice of working substance comparison of results of different machines

---

(1½ hours weekly)

Laboratory Practice.—

---

## MECHANICAL ENGINEERING (THEORY OF MACHINES.)

(Second Term—1 hour weekly)

*Kinematics of machines*—Kinematic chains and their inversion, Analysis of motion, Angular, Reciprocating and straight line motions, Toothed gearing, Trains of wheels and epicyclic gears, Belts and belting Rope and chain drives, Cams

*(Third Term—2 hours weekly)*

*Dynamics of machines* —Friction and lubrication Static equilibrium of machines Turning moment diagrams Fly wheels Governors

---

*(Fourth Term—2 hours weekly)*

Balancing of machines Brakes and Dynamometers

---

*(Fifth Term—1 hour weekly)*

Hydraulic machines

---

*(1½ hours weekly)*

Laboratory Practice

---

## MACHINE DRAWING

*(Second Term—2 hours weekly)*

Fastenings applied to structures Design of bearings Working drawings for a crane jib Hydraulic pipe lines pipe joints and specials

---

*(Third Term—2½ hours weekly)*

Complete working drawings for (a) Canal Sluice Gate (b) Travelling gantry Drawing from measurement of a complete 5 H P engine

---

## MECHANICAL ENGINEERING

*(First Term—4 hours weekly)*

Workshops —Practical work in Carpenter s Blacksmith s and Moulding Shops

(Second Term—2 hours weekly)

Workshops —Practical work in machine and fitting shops

## ELECTRICAL ENGINEERING.

(Third Term—2 hours weekly)

**Electrical Technological.**—*The magnetic circuits*—General consideration, Magnetic leakage Circuits in parallel, Cycles of Magnetism, B H Curves

*Electromotive force*—Production, Induced E M F , Statically and self induced E M F , Co efficiencies of self and mutual induction, Rise and decay of current

*Construction of D C Machines*—Windings, Commutation, E M F , equation Armature reaction, Interpoles, Compensating windings Characteristics of D C Generators

*Direct Current Motors*—Back E M F , speed, Characteristics, Series Shunt and Compound Motors Speed control, Series and parallel working

(Fourth Term—4 hours weekly)

*Alternating Current*—Principles, Effective value Induction, reactions and capacity, Polyphase currents, Alternators, Voltage regulation and parallel working, the induction motor, Converting machinery

*Transformers*—Single phase, Construction Theory, Use Cooling Auto transformers Parallel working Single phase commutator motors, Complex wave forms Phase advancing; Electric furnaces Electric welding

*Rectifiers*—Mercury and Valve

Power House equipment

• (Fifth Term—4½ hours weekly.)

*Transmission and distribution of electrical energy —*  
Supply system, Distributors; Insulation resistance; Feeders;  
Line constants, Lines, Insulators; Mechanical Characteristics;  
Cables Voltage control, Circuit breakers, Feeder protection,  
Travelling waves Protection against overvoltages.

### Group VI.—PROJECTS.

The projects will consist of the preparation of detailed designs and estimates for various engineering schemes. There will be one minor project, which will be examined by internal examiners and a major project which will be set and examined by an outside examiner. The maximum marks allotted to the minor project are 300 and to the major 700, making a total of 1,000 in this Group.

## Group VII. PHYSIQUE AND GENERAL FITNESS.

General Fitness includes discipline punctuality general conduct and ability to control labour etc throughout the three years course Over 10 per cent of the total marks for the whole three years course are allotted to this group and the total marks therefore constitute a very fair and true record of the student's intellectual and physical fitness for the work of an Engineer

The sub heads and the marks allotted are —

	I year	II year	III year	Total
Military Proficiency —				
Physical Training	75			150
A F I and U T C			100	100
Games and Sports	70	75	175	320
Swimming			30	30
General Fitness			200	200
<b>Total</b>	<b>145</b>	<b>100</b>	<b>500</b>	<b>800</b>

OVERSEER CLASS

1941 42

## COURSE OF STUDY AND SYLLABUS

## OVERSEER CLASS

1941-42 and till further notice

The chief points kept in view in arranging this Course of Study are to ensure the necessity for steady work throughout the whole course and to co-ordinate the instruction given in each subject so as to lead up to a thorough test of the qualifications necessary for an overseer in the Public Works Department of as high a grade as a College training can produce, special attention being paid to the local conditions of India. This test is represented by the Project and the Final Examinations. Of the marks obtained in the first year 50 per cent are carried on to the second year so that continuous steady work is necessary for ultimate success.

*Terms and Examinations*

**FIRST TERM—**

*College Attendance*—From October 16 to a variable date in January.

*Mid-Sessional Examinations*—For both the 1st and 2nd year students start in the last week of January.

**SECOND TERM—**

*College Attendance*—Start on the Monday following the Mid Sessional Examinations and continue till about the first Saturday in June.

*Revision in Quarters*—During Entrance Examination  
*Final Examinations*—Start in the last week of April

The Course of Study extends over two years, and comprises the following subjects grouped under seven heads —

- |       |  |
|-------|--|
| Group | I—Civil Engineering including Process work |
| „     | II—Mathematics and Physical Science        |
| „     | III—Surveying                              |
| „     | IV—Drawing                                 |
| „     | V—Mechanical and Electrical Engineering    |
| „     | VI—Project and design                      |
| „     | VII—General Fitness                        |

The marks required at the end of the second year for certificates are as follows

I—To obtain the Higher Certificate as Overseer the minimum pass marks of 45 per cent in each group and 60 per cent in the total must be obtained

II —To obtain an ordinary certificate (required for all overseers) the minimum pass marks of 33 per cent in each group and 45 per cent in the total must be obtained

For admission to the 2nd year a student has to obtain at least 33 per cent of the marks allotted to each group and 45 per cent of the grand total

A student who fails to attain the standard prescribed in any of the two years course will be given one more chance to repeat his studies at the College in the same class provided his stay at the College does not exceed three years. Such a student will not be eligible to compete for the United Provinces Government scholarships or academic prizes

Should the failure be however, due to prolonged absence through sickness or other circumstances beyond the student's control, such cases will be considered and decided upon their merits

The examinations and the marks assigned to them are shown on the following pages

## GROUPING

### FIRST YEAR

- 1 Civil Engineering
- 2 Mathematics and Physical Science
- 3 Surveying
- 4 Drawing
- 5 Mechanical Engineering

Students will be required to obtain 33 per cent in each group and 45 per cent in the aggregate

Fifty per cent of the aggregate marks in each group will be carried over to the second year

### SECOND YEAR

- 1 Civil Engineering (Process work included)
- 2 Mathematics
- 3 Surveying
- 4 Drawing
- 5 Mechanical and Electrical Engineering
- 6 Project and design
- 7 General Fitness

Fitness for department	150
Physical training	100
Games and Sports	150

Students will obtain 33 per cent in each group and 45 per cent of the total for ordinary certificate

For Higher certificate 45 per cent in each group and 60 per cent in the total

# LIST OF HOURS ALLOTTED TO EACH SUBJECT IN THE OVERSEER CLASS

## First Year

<i>First term</i>	<i>Hours</i>	<i>Second term</i>	<i>Hours</i>
Building materials	3	Building construction	4

## Group I.—CIVIL ENGINEERING.

### BUILDING MATERIALS.

(1st year, 1st term, 3 hours a week.)

**Stone.**—Classifications and varieties Characteristics Suitability for structures Quarrying, blasting and dressing

**Bricks, tiles, fire-bricks and terra-cotta.**—Composition of earth Moulding, drying and burning Characteristics and essential features

**Lime and Cement.**—Method employed in manufacture Essential features British standard specifications for cement

**Timber.**—Growth and structure Felling, converting and seasoning Decay and methods of preservation Common defects Characteristics of timber commonly used in India

**Metals**—Characteristics and properties of cast iron, wrought iron, steel, lead, copper, brass, zinc and tin

**Miscellaneous.**—Preparation of mortars Mixing, laying and curing concrete Plastering and pointing White and Colour-washing Other building materials such as asbestos and galvanized iron sheets, slates, paints, varnishes, distempers, Bitumen, Asphalt etc

### ROADS.

(1st year 1st term 2 hours a week.)

History and development Alignment Traffic census and cross-sections Gradients Curves Subsoils, under-drainage, soling and formation Earth, hankar and stone roads Temporary roads Hill roads Bridle paths Col-

lection and tests for materials Dust prevention Bitumen asphalt, tar and cement roads Pavements Wear and maintenance of roads Drainage crossings Arboriculture Preparation of road projects

## BUILDING CONSTRUCTIONS

(1st year, 1st term, 3 hours a week)

**Brickwork**—Technical terms Bends Hollow walls Prevention of damp Arches Sills Lintels Bending of new and old work Plastering and pointing

**Stone Masonry**.—Different types of stone masonry—Ashlar, Block in course and rubble Dressing stones Joints Stone Lintels Arched lintels Marble linings Hoisting apparatus Corbel, jamb, sill and coping Raking back

**Carpentry**.—Various types of joints and fastenings Points observed in designing joints Wooden floors, partitions, roofs, stair cases, centres, staging, shoring and underpinning Joinery Special precautions necessary in selecting timber for joinery work Points observed in designing joints Different types of joints Doors and windows

(1st year, 2nd term, 4 hours a week)

**Foundations**.—Benching out Foundations in black cotton soil Fire places, flues, chimney stacks Precaution against settlement Columns, stanchions and girders with details of construction Various types of flat and pent roofs then details of construction and drainage Floors ceilings partitions, staircases Selection of site for a building, orientation of building, arrangement of rooms and accommodation allowed Ventilation in a building

(2nd year, 1st and 2nd terms, 2 hours a week)

Design of a steel structure (a roof truss or a water tank) and a small building with calculations for foundations, pillars, lintels, R S Joists, tie rods, rafters, purlins, battens, etc

**EARTHWORK***(1st year 2nd term, 2 hours a week)*

Definition of technical terms Contracts Stability of different soils, angle of repose Properties of various kinds of earths, preservation of materials obtained in excavations Measurements Setting out Tools and implements used Cuttings, economical depth methods of raising earth from a deep cutting Embankments settlement allowance, methods of consolidation, slopes protection drainage Puddle—dry and wet Puddling Alignment of distributaries, borrow pits, spoil banks Profiles bed bars Temporary and permanent land Repairs Specifications Earthwork of hill roads

---

**FIELD ENGINEERING***(1st year 2nd term 2 hours a week)*

**Use of Spars**—Various knots and lashings and the suitability of each to certain circumstances Coiling and landing of ropes Blocks and tackle Reeving of blocks Use of handspikes and rollers Hold fasts Guys Use and construction of derricks, shears Gyns and trestles in placing girders or columns in position in buildings, etc

**Ground Tracing**.—General principles Working plans for foundations on level ground and on slopes Trenches with vertical and with sloping sides Laying out buildings on the ground and similar practical instruction

---

**IRRIGATION***(2nd year, 1st term, one hour a week)*

Definition of irrigation Classifications Natural, artificial, lift flow perennial, inundation Principal Indian crops, their crop seasons depths of water required for various crops

**Well Irrigation**—Sources of supply, subsoil water reservoirs, mota, drainage cones, classes of wells. Methods of raising water from wells. Duty of a well. Cavity and strainer type of tube wells. Various types of strainers. Critical velocity and depression head.

**Channels**—Canal. Distributary (major and minor). Duty. Water depth and running days. Evaporation absorption and percolation. Supplies utilized and lost. Safe and critical velocities. Kennedy's Channels design of channel from Barret's diagrams. Lacey's channel design of channels from Lacey's tables. Rise in subsoil water level. Water logging. Minor channels. Discharge of outlets.

Students will design a channel from the data supplied

(2nd year 2nd term 5 hours a week)

**Works**—Distributary heads. Regulators discharge sites. Falls. Siphon. Rapid. Bed Bars. Escapes. Drainage works. Silt tanks.

**Head Works**—Brief description of head works. main weir. afflux. classes of weirs. causes of failure of weirs. description of foundation of weirs. Bridge. Drop and lift shutter. Under sluices. Object and description of groynes below weirs. Talus below weirs. Afflux embankments. Canal head. Regulators. Temporary bunds. Scouring sluices.

**Torrent Works**—Brief description of aqueduct. level crossing. superpassage. siphon. inlet. drainage. diversion.

**Reservoir Irrigation**—Capacity. duty. embankments. dams. spill ways. Drainage of dam. Saddle escapes. Breaching sections.

**Training Works**—Types and their object. Straightening channel. Temporary training works. Method of directing current.

The students will design a small fall and a siphon.

**WATER SUPPLY***(2nd year 1st term 2 hours a week)**(2nd term, 2 hours a week)*

**Sources of Supply**—Rivers, lakes, springs and wells  
 Types of wells shallow and deep wells Tube wells  
 Diving tube wells in soft soil Varieties of tube wells  
 Tests for yield of tube wells Purity at source Sampling of  
 water for analysis

**Pumping arrangements**—Intakes and unfiltered water  
 pumping statics Filtered water stations Tests Rising  
 mains

**Storage**—Reservoirs and tanks

**Purification**—Mineral and organic impurities Hard  
 and soft water Settling tanks Coagulation tanks and  
 filter—slow sand and mechanical Chlorination and  
 chloramination Clear water reservoirs

**Distribution**—Intermittent and continuous systems  
 Service reservoirs Distribution pipes Pipe fittings  
 House connections Alignment of mains Pipe joints  
 Quantity supplied per capita Method of calculating sizes of  
 pipes Loss of head in pipes Meters—Positive and  
 Inferential Waste detection and prevention

---

**SANITARY ENGINEERING***(2nd year 2nd term 2 hours a week)*

**Systems of collection and removal of refuse**—Conservancy  
 and hand removal and sewerage systems Refuse destructors

**Sewers and underground drains**—Separate and combined  
 systems Alignment of sewers and their sections Fall and  
 velocity Flushing Catch pits gullies manholes  
 Ventilating of sewers Clearing of obstructions Storm  
 overflows Testing of sewers

**Surface drains.**—Alignment and their sections Provision for rain water Flushing and cleaning Junctions Road crossings

**Sanitary Fittings.**—Sanitary appliances Construction and testing of house drains Pail depots Public latrines and Urinals

**Sewage Purification and disposal**—Screening chamber Detritus tank Sedimentation tank Chemical precipitation tanks Biological treatment Land irrigation Contact beds Percolating filters Bio aeration treatment Simplex process Septic tank treatment Selection of site for out-fall

---

## BRIDGES

*(2nd year, 1st term, 2 hours a week )*

*(2nd term, 2 hours a week )*

Selection of site Calculation of water way Discharge from catchment area and afflux Different types of temporary and permanent bridges Different types of steel bridges Plate girder bridge End bearings Foundation on dry ground, in soil charged with water and under water Piers Abutments and wing walls Depth and width of foundations Roadway River training Piles and pile driving Sheet piles Cofferdams Sinking of wells Design of a small culvert Design of a small plate girder .

---

## RAILWAYS.

*(2nd year, 2nd term, 2 hours a week )*

History and development Alignment Grades Cross sections in embankment and cutting Curves The gauge problem Formation, Ballast Sleepers Rails Joints and fastenings Elementary treatment of points and Crossings Plate laying Superelevation Road Crossings

Tunnels Station requirements Wear of Rails Creep of  
Rail Maintenance of permanent way

---

## REINFORCED CONCRETE

*(2nd year 2nd half session 3 hours a week )*

Proportion of cement sand ballast and water Water  
cement ratio Calculations with details of design of simple  
slab Two way reinforced slab Simple beam Doubly  
reinforced beam T Beam Short columns and R C  
Pipes Reinforcement in fixed and continuous beams  
Reinforced brickwork slabs and lintels Shuttering and  
centering Design of a reinforced concrete T Beam floor  
Design of a R C Culvert

## PROCESS WORK

*(1st year 2nd term )*

Students will be shown the details of both the Ferrugine  
and Ferro prussiate processes and will be expected to make  
prints from their own tracings on paper sensitised com  
mercially and on paper which they will themselves sensitise  
Each student will submit three copies of prints on each kind  
of paper in both processes

---

## ESTIMATING

*(2nd year 1st term 2 hours a week )*

*(2nd term 2 hours a week )*

Taking off quantities required for engineering structures  
abtracting and billing Estimating quantities of earthwork  
in roads canals etc

Plinth area and cubical contents estimates Analysis of  
rates for common items of construction General and detailed  
specifications Preparation of contracts

## Group II — PURE AND APPLIED MATHEMATICS AND PHYSICAL SCIENCE

### ELEMENTARY MATHEMATICS

*(1st year 1st term)*

**Geometry** — Students will be expected to become familiar with the subject matter of Hall and Stevens School Geometry Parts I to V. Students will also be expected to solve simple riders and to apply the propositions practically in the solution of easy graphical problems requiring geometrical drawing.

**Mensuration** — Surface and volumes of cones frusta of cones spheres zones of spheres pyramids prisms cylinders and wedges.

**Trigonometry** — Angles and their measurements Trigonometrical ratios. The relation between the ratios of complementary and supplementary angles and of multiple and sub multiple angles.

*(1st year 2nd term)*

**Trigonometry** — Simple identities and equations. Solution of triangles including problems relating to heights and distances and those requiring the use of logarithms.

### ELEMENTARY MECHANICS

*(1st year 1st term)*

Velocity and acceleration. Relative velocity. Absolute unit of force. Simple examples on rectilinear motion including the principles of energy and momentum. Conception of force. Elementary laws relating to concurrent forces. Parallelogram and triangle of forces. Lami's

theorem Parallel forces Funicular polygons Moments  
Friction Simple cases of equilibrium

*(1st year 2nd term)*

Centre of gravity Principle of work Simple machines,  
namely lever screw pulleys wheel and differential pulleys  
velocity ratio mechanical advantage and efficiency

---

## APPLIED MECHANICS

*(1st year 2nd term)*

Determination of stresses in roof frames including the  
effect of wind pressure Bending Moment and Shear Force  
diagrams for cantilevers and simply supported beams Hooke's  
Law stress and strain Resilience

*(2nd year 1st term)*

Stress analysis Principal stresses Conjugate stresses  
Uniformly varying stress Application of Rankine—Gordon's  
formula for struts Moment of resistance and strength of  
beams Design of wooden and steel beams Stiffness of  
beams and calculation from deflection formula for simple  
cantilever and beams under (1) a distributed load and (2) a  
single concentrated load

*(2nd year 2nd term)*

Stability of masonry structure Testing of retaining  
walls and masonry arches

---

## HYDROSTATICS

*(1st year, 2nd term)*

Fluid pressure at a point in a mass of liquid at rest and  
on a plane surface partly or wholly immersed Intensity of  
pressure and whole pressure Centre of pressure in simple  
elementary cases

**HYDRAULICS***(2nd year, 1st term)*

Bernoulli's theorem Discharge through orifices and mouth pieces and over notches and weirs Laws of Fluid friction Discharge through pipes sewers channels

**PHYSICAL SCIENCE***(1st year)*

The subject is an elementary one and is taken up with special reference to the Engineering subjects. The elementary physical principles taught are illustrated by numerical examples in tutorial work and the measurement of principal quantities involved is carried out in the physical laboratory by students in a simple manner.

**General Measurement**—Fundamental units in C G S and F P S systems Mass density and specific gravity Buoyancy Determination of specific gravity by simple methods Atmospheric pressure and Boyle's Law Fortin and aneroid barometers siphon pressure gauges and water pump

**Heat**—Mercury thermometer and its graduation Expansion of solids liquids and gases with simple application Charles Law Units of heat specific heat its measurement by the method of mixtures measurement of specific heat of liquid by the method of cooling Laws of fusion and ebullition melting and boiling points latent heat evaporation Transfer of heat by conduction convection and radiation with simple applications of these methods Heat and work mechanical equivalent of heat Calorific value of coal Thompson's fuel calorimeter

**Light**—Rectilinear propagation of light and shadows Units of illumination and illuminatory power Photometers

Laws of reflection and refraction mirrors and lenses  
 Elementary Electricity and Magnetism

**Magnetism** — Properties of magnets and magnetic needles magnetic poles and fields magnetic induction, law of inverse squares terrestrial magnetism with reference to dip intensity and variation

**Electricity** — Voltaic cells Daniell cells Leclanché cells Bunsen cell Dry cells Accumulators

Oersted's experiment Ampère's rule Magnetic field due to a current in a straight wire and in a circular wire Electric telegraph electric bell The principle of electromagnetic induction

Heating lighting and chemical effects

Ideas about unit current voltage power and energy, Ohm's law Simple grouping of cells and resistances

Ammeters voltmeters wattmeters tangent galvanometers

The course of experimental work in the Science Laboratory should take the student over a range of experiments covering as far as possible the syllabus in Science

### Group III.—SURVEYING

(1st year, 1st term, 1 hour a week)

**The Level**—The use and adjustment of the level  
Different types of levels and their constructional details  
Different types of levelling staves and their markings Their relative merits  
Precautions in using levels Level field books of different kinds Booking and reduction of levels  
Comparative merits of reduction methods Definition of terms used in levelling Sources of error Curvature and refraction Longitudinal sections and their plotting  
Allowable closing error

(1st year, 2nd term, 4 hours a week)

**Chain Surveying**.—Equipment Ranging and chaining lines Error in chaining Customary limits of error Reconnaissance Selection of stations Keeping of the field book Obstacles which obstruct chaining but not ranging Obstacles which obstruct ranging but not chaining Obstacles which obstruct ranging and chaining Plotting the survey

**Compass Surveying**—The Prismatic Compass, constructional details and its uses Bearings and angles Magnetic and true meridian Variations Designation of bearings Comparative merits of whole circle and quadrantal reckoning Back bearings Application of compass surveying Local attraction Elimination of effects Sources of error Limits of precision Adjustment of closing error

The students will carry out and prepare one combined plate of chain and compass survey

(2nd year, 1st term, 12 hours a week)

**The Theodolite**—The use and adjustments of the theodolite Parts of horizontal measurement Parts for

vertical measurement Details of the Theodolite Measurement of angles Repeating angles Requirements of the Theodolite Conditions established by adjustment Errors in non adjustable parts Elimination of these errors

**Traversing and its computations**—Definition of a traverse Gale's traverse system Conditions fulfilled in a closed traverse Calculation and tabulation of co ordinates Closing error and its adjustment Advantage of plotting by co ordinates Omitted measurements and their calculations

**Plane-tableing.**—Equipment Advantages and disadvantages of plane tabling Maxims for plane tabling Order of working Methods of plane-tableing Fixing of position Traversing with the plane table Engineering contouring

The students will carry out a theodolite traverse and plane table triangulation survey and detail filling with plane-table together with contouring

*(2nd year, 2nd term, 2 hours a week )*

**Curves and Alignments**—Designation of curves Elements of curves Setting out by means of Theodolite and chain Setting out by means of chords and offsets Methods of calculation when curves start or end with sub chords Tabulation Problems in simple and compound curves Curve of deviation Transition curves Simple method for laying out a transition curve

**Engineering Surveying.**—Surveying requirements when making a project for a building, bridge, road canal distributary or railway

### Group IV.—DRAWING.

(1st and 2nd years)

The course has been arranged to carry the student step by step in the technique of drawing as a preparation for a course in engineering design and survey mapping.

Drawings will be made of building construction details, culverts, railway and road plans, etc. In addition, drawings will be made from actual measurements taken of existing buildings. Projections and sections of solids.

#### Details of Drawing Plates

Serial no	Drawing Plates	No of hours allotted	Remarks
<i>Overseer Class first year</i>			
1	Sections of Mouldings	4	
2	Projections of Solids including their sections development of surfaces and isometric	12	
3	Doors and windows	8	
4	Wooden trusses	8	
5	Wooden stair case	12	To be inked
6	Railway culvert	8	Oblique section to be given
7	Drawing a small building from sketches	12	To be inked Oblique sections to be given
<i>Overseer Class second year</i>			
8	Drawing from measurements	20	To be inked
9	Designing a bungalow from specifications	20	
10	Steel Bridge from measurement	12	To be inked

NOTE—All drawing plates must be done in College during drawing periods and the dates of commencement and completion with the student's name and order of standing in the class are to be written on each plate.

## Group V —MECHANICAL AND ELECTRICAL ENGINEERING

---

### WORKSHOPS

*(1st and 2nd years)*

The object of the course is to familiarize students with the appearance structure and properties of materials commonly used in engineering and with the tools and processes by which they are shaped

**Carpentry** —A series of simple exercises will be provided including the preparation of various types of joints used in wood work

**Foundry** —The use and preparation of sand moulds and the explanation of Foundry methods

Students will be provided with simple patterns and cores from which they will prepare moulds and make castings in white metal, etc

**Forge** —Use of tools employed in forge work Exercise in drawing down upsetting welding etc

**Fitting and Machine Shop** —Use of hand tools in bench work Cutting tools and their action Characteristic features of simple machine tools

---

### MECHANICAL ENGINEERING

*(1st year)*

**Fastenings** —Screws, Bolts, Nuts their production and uses Rivets and riveted joints, standard iron and steel sections

**Boilers** —Shell Water tube and Fire tube Description of the more common types, their erection and inspection

Boiler accessories description and uses Steam pipe lines  
Arrangement and Lagging

Steam Engines —Description of the simplest types  
including portable engine Engine foundations Erection

*(2nd year)*

Internal Combustion Engines —Description of oil petrol  
and gas engines Foundations Location of starting and  
running faults

Hydraulic Machinery —Laying and anchoring of pipe  
lines Description of turbines Description of common  
types of reciprocating and centrifugal pumps

Power Transmission —Elementary treatment of power  
transmission by means of belts, gearing, ropes chain and  
friction drives

Lectures will be illustrated by models wall diagrams of  
modern machinery and conducted inspections of examples of  
the above machinery in the College workshops and  
laboratories

## ELECTRICAL ENGINEERING

*(2nd year 1st term, 1 hour a week)*

*(2nd term 2 hours a week)*

House Wiring —Principles laid down by Government  
Specifications for internal wiring

D C Power Plants —Lay out of simple D C distribu-  
tion systems Description and working of simple switch  
boards Protection devices and knowledge of normal faults  
in a small power station

A C Power Plants —Lay out of simple A C generating  
and distribution systems Description of alternators induc

tion motors and transformers. Comparison of A C and D C distribution system

The lightning conductor, parts used in and general rules for erection function of the lightning conductor Earth resistance of the conductor and method of measuring it Other tests to see that the conductor is in good condition

The course will not include the theory or manufacture of electrical machinery but laboratory demonstrations will be given of every principle dealt with in the course

### **Group VI.—PROJECT AND CIVIL ENGINEERING DESIGN.**

The student will be required to design a number of simple structures under professional instruction and guidance.

The course will include the design of small buildings, culverts, simple design of beams, columns and slabs in reinforced concrete. Steel trusses, steel stanchions and small Falls for minors and distributaries.

Special stress will be laid on the design of constructional details.

The actual Project will consist of the preparation of a detailed design for an engineering scheme complete with report specifications and estimate. Each student will do his work independently.

## Group VII —PHYSIQUE AND GENERAL FITNESS.

*(1st and 2nd years )*

Physical Drill —Proficiency in games and athletic sports  
Physical and moral fitness for work in the engineering  
profession

The sub heads and marks allotted to Group VII Physique  
and General Fitness are —

Physical Drill	100
Athletics—Proficiency in games and sports	150*
General Fitness—Physical and moral fitness for work in the engineering profession	150
Total	400

---

\*Athletics will be marked for Football Hockey Tennis and Athletic  
Sports and such marks will be awarded by the Headmaster in consultation  
with the Principal Any three will carry the 150 marks

## COURSE OF STUDY AND SYLLABUS

---

DRAFTSMAN CLASS

---

*Building Construction*

(1ST YEAR, 1ST TERM)

**Building Materials**—Brick stone timber and metal—various kinds and their qualities

**Brick-work**—Technical terms English and Double Flemish bonds arches, sills, lintels bonding of new and old work, plastering and pointing

**Stone Masonry**—Different types of stone masonry—Ashlar, Block in course and rubble, technical terms, Corbel, jamb, sill, coping and lintel

(1ST YEAR, 2ND TERM)

**Carpentry and Joinery**—Various types of joints, a king post truss, queen post truss, various types of doors, windows, clerestory windows and their joints

**Reinforced Concrete**—Materials used and their qualities, function of each of the constituents, method of construction including details of false work

(2ND YEAR, 1ST TERM)

Details of a fireplace, chimney stack and flue Simple flat and pent roofs, floors and staircases

(2ND YEAR, 2ND TERM)

Working out sizes of scantling for roofs, floor joists, beams (wooden, steel and concrete) Calculations for the design of foundations, footings, lintels, arches and columns

## (3RD YEAR, 2ND TERM)

Calculation of simple Reinforced Concrete Structures — beams, slabs, and short columns

*Elementary Mathematics*

## (1ST YEAR, 1ST TERM)

Algebra—Factors, square roots, simple equations and simple quadratic equations

Mensuration—Areas of rectangles, triangles, parallelograms and quadrilaterals

## (1ST YEAR, 2ND TERM)

Mensuration—Area of regular polygons, circles and their segments, volumes of cubes, prisms, cones, pyramids and cylinders

## (2ND YEAR, 1ST TERM)

Elementary Trigonometry—Sines, cosines, tangents, cotangents and their use and logarithms

Elementary Applied Mechanics—Conception of Force, stress and strain Various types of stresses Moments, bending and resisting Bearing force and their application to simple beams

*Estimating*

## (2ND YEAR, 2ND TERM)

Estimating of the following

- (1) A small building with pent roof
- (2) A small building with flat roof.
- (3) A small culvert.

## (3RD YEAR)

1st Term and 2nd Term—The same as in Overseer Class 2nd Year.

*Ferrottype*

Tracing of five drawing plates on linen    Taking out blue prints

(1ST YEAR)

*Drawing Plates*

(1) Block printing of modern style and ornamental practice of freehand printing

(2) Italic printing—slanting and upright

(3) Scales—principles of scales and scaling

(4) Simple Geometrical figures    Construction of arches

(5) Orthographic projections    Projections of solids

(6) Flat tinting

(7) Simple building with oblique sections

(8) One small culvert with oblique sections

(9) A simple building with flat roof and its constructional details

(10) Measured drawing of residential building with pitched roof showing oblique sections

(11) Details of doors and windows and other large scale details of one of the above buildings

*Lecture work*

Description and use of instruments and paper used in Engineering Drawing

Use of projective drawing in building drawing

(2ND YEAR)

*Drawing Plates*

(1) Parallel of the orders    Their application

(2) Constructional details of one of the various types of domes

(3) Intersection of solids

- (4) Shades and shadows
- (5) A big residential building—double storeyed
- (6) A school building, a court house, a post office, a bank building or a small hospital
- (7) A water tower
- (8) Regulator and head of a small distributary
- (9) A canal fall
- (10) A canal syphon
- (11) Structural Steel Work Details
- (12) Plotting from field book of chain Survey
- (13) Plotting a longitudinal section

*Lecture work*

Five orders of classic architecture

Different types of pillars in Indian style of architecture

Different types of arches including those in Indian style

(3RD YEAR)

*Drawing Plates*

- (1) Sketching and rendering
- (2) Making perspective of a building
- (3) A Reinforced Concrete bridge
- (4) Measured drawing of a trussed girder bridge
- (5) Measured drawing of a large building including rendering and preparing show drawings

## PRIZES

---

### CIVIL ENGINEERING CLASS

THE COUNCIL OF INDIA PRIZE OF RS 1,000

To the most distinguished student who obtains the

• Honours Diploma in Civil Engineering

---

THE THOMASON PRIZE OF RS 250

To the most distinguished student who obtains the  
Honours Diploma in Civil Engineering but does not obtain the  
Council of India Prize

---

THE RAI BAHADUR KANHAIYA LAL GOLD MEDAL

To the most distinguished Indian student, who does not  
obtain the Thomason or Council of India prize

---

THE THOMASON GOLD MEDAL AND BOOKS WORTH RS 25

To the student who submits the best engineering projects  
of a certain minimum excellency

---

THE CAUTLEY GOLD MEDAL

To the student who is the best mathematician and who  
obtains the highest marks in the papers shown below, but not  
less than  $\frac{2}{3}$ ds of the total marks i.e. 416

#### 1st Term

Mathematics	50
Mechanics	50

*2nd Term*

Mathematics ..	..	..	..	75
Mechanics ..	..	..	..	100
Graphic Statics ..	..	..	..	50
Mechanics Tutorial	..	..	..	50
				<hr/>
				375
				<hr/>

*3rd Term*

				375 $\times$ .4	..	150
Mathematics ..	..	..	..	..	..	75
Mechanics ..	..	..	..	..	..	100

*4th Term*

Mathematics ..	..	..	..	..	100
Mechanics ..	..	..	..	..	100
Tutorial ..	..	..	..	..	100
				<hr/>	
				Total marks ..	625
					<hr/>

## THE CALCOTT REILLY MEMORIAL GOLD MEDAL .

To the student who obtains the highest marks in Applied Mechanics (Strength of Materials, and Theory and Design of Structures).

The papers concerned are detailed below :

*1st Term*

Strength of Materials	..	..	..	50
-----------------------	----	----	----	----

*2nd Term*

Strength of Materials	..	..	..	100
				<hr/>
				150
				<hr/>

*3rd Term*

				150 $\times$ 4	..	60
Strength of Materials and Theory of Structures	..	..	..	..	..	100

*4th Term*

Theory of Structures	100
Design of Structures	100
	<hr/>
	360
	<hr/>

*5th Term*

	360 x 7	252
Theory and Design of Structures	1st paper	100
Ditto	2nd paper	100
		<hr/>
Total marks		452
		<hr/>

THE GENERAL MACLAGAN PRIZE, BOOKS TO THE VALUE OF  
Rs 34

To the student who obtains the highest number of marks in experimental science Highest marks in Electrical Engineering final year result plus highest marks in Physics 1st year results

THE SUSHILA AND J. MITRA MEMORIAL SILVER MEDAL

To the Indian student, who obtains the highest number of marks in chemistry in 2nd year results If there is a tie 1st year results will decide

THE PURANMAL SILVER MEDAL FOR PUBLIC HEALTH  
ENGINEERING

The Puran Mal Silver Medal for Public Health Engineering awarded to the Civil Engineer class, 3rd year, student who obtains the highest marks in the final external examination paper on Water Supply and Sanitary Engineering

SILVER MEDALS

for

SURVEYING HIGHEST MARKS IN THREE YEARS	DRAWING HIGHEST MARKS IN FIRST YEAR
	MECHANICAL ENGINEERING HIGHEST MARKS IN THREE YEARS

## CIVIL ENGINEERING (THEORY)

To the student who obtains the highest marks in Civil Engineering (Theory)

1st Term		
Building Construction	50	}
2nd Term		
Building Construction	100	
Communications	100	
<hr/>		
	250	}
<hr/>		
3rd Term		
200 x 4	100	
Hydraulics	100	
Communications	100	
4th Term		
Irrigation	100	
Hydraulics	100	
Reinforced Concrete	100	
<hr/>		
	600	}
<hr/>		
5th Term		
600 x 7	400	
Irrigation	100	
Reinforced Concrete	100	
<hr/>		
Total marks	600	

Subjects of Surveying, Drawing and Public Health Engineering have been omitted as they have a separate medal for each of them.

## LABORATORY WORK

To the student, who obtains the highest number of marks in practical and class work in Physics and Chemistry

## OVERSEER CLASS

THE GENERAL NEFIT PRIZE OF A SILVER MEDAL AND Rs 100

To the most distinguished student, who obtains the highest number of marks

---

THE KEAY MEMORIAL SILVER MEDAL AND Rs 18 (APPROX)

To the student who obtains the highest number of marks in Estimating

---

THE DUTTA DAS DUTTA MEMORIAL SILVER MEDAL

To the most distinguished Indian student, who obtains the Higher Certificate and who obtains the highest number of marks

---

THE RAI BAHADUR KANHAIYA LAL SILVER MEDAL

To the most distinguished Indian student who obtains the highest number of marks

---

THE RAI BAHADUR KANHAIYA LAL SILVER MEDAL

To the Indian student who obtains the second highest number of marks

---

THE FAIRLEY MEMORIAL SILVER MEDAL

To the student who obtains the highest number of marks in Applied Mechanics

---

THE SULLIVAN MEMORIAL SILVER MEDAL

To the student, who obtains the highest number of marks in Mechanics

---

LALA PURAN MAL MEDAL FOR PUBLIC HEALTH ENGINEERING

The Puran Mal Silver Medal for Public Health Engineering awarded to the Overseer class, 2nd year student, who obtains the highest marks in the final external examination paper on water supply and sanitary engineering

### THE PROJECT PRIZE OF A SILVER MEDAL.

To the student, who submits the best engineering project.

### SILVER MEDALS

for

MATHEMATICS.

DESCRIPTIVE ENGINEERING

SURVEYING.

DRAWING.

WORKSHOP PRACTICE.

To those students, who obtain the highest number of marks in these subjects

### DRAFTSMAN CLASS

THE GENERAL MERIT PRIZE OF A SILVER MEDAL AND RS 30

To the most distinguished student, who passes out head of the class

A SILVER MEDAL AND RS.20.

To the student, who passes out second in the class

N B—No prize will be awarded when the competition for it is insufficient for any other adequate reasons

### GENERAL.

In addition to the numerous academic prizes there are many challenge cups and trophies for various events. These are mentioned below.—

(1) *The Harcourt Butler Cup—*

The cup is awarded under two sub heads "Work" and "Play".

"Play" shall be deemed to be that portion of the course (Civil Engineer Class) called "Physique and General Fitness" group as follows:

A. F. I. and U. T. C.

250 marks.

Athletics—Proficiency in Games and Sports

350 marks

## General Fitness—Physical and Moral Fitness

for work in the Engineering Profession 200 marks

Total—For Play Group 800 marks

Total—For Studies or Work for  
the three years 542½ marks

This total is reduced to a maximum of 800 marks by the multiplier  $800/542\frac{1}{2}$  (or 0.14746)

Harcourt Butler Cup is awarded to the student who obtains the highest marks out of a total of 1600 marks consisting of 800 marks for play and 800 marks (reduced from a total of 542½ as above) for work.

In case of a tie the student who obtains higher marks in the group Work (i.e. studies)

(ii) The Sanders Challenge Cup is to be awarded annually as a Challenge cup to the College student of whatever Class who is adjudged the best in all Games and Athletic Sport combined (excluding Rowing). It is to be awarded on the result of the College Championship events in Games and Athletic Sports and on skill and performance in team games such as Cricket etc.

2 The cup is awarded on marks on a basis of 50 per cent each for Games and Athletic Sports by a Committee composed of

(i) President of Recreation

(ii) President Athletic Sports Committee

(iii) Officer in charge of each Game

3 For the award of marks the two groups are divided into 4 sub groups each. Each sub group carries a maximum of 10 marks. These sub groups are

(a) Games—

(i) Tennis

(ii) Hockey

(iii) Football

(iv) Cricket

(b) Athletic Sports

(v) Throwing the Cricket ball and putting the shot

(vi) High Jump, Long Jump, Hurdles

(vii) 100, 220, 440 Yards Races

(viii) 880 Yards Race, 1 mile and Cross Country Races

(a) Games—In tennis, marks will be allotted as follows :

Finals or Olympic	10 marks
-------------------	----------

Semi Finals	8 marks
-------------	---------

Quarter Finals	6 marks
----------------	---------

These positions refer to the results of the annual tournaments for that year. In the event of a competitor coming amongst first eight in singles and doubles, the mean result will count. In Cricket, Football and Hockey, any student who represents the College in Olympic will be awarded 10 marks. Otherwise 8 or 6 marks will be allotted by the Officer in-charge of the game at his discretion.

(b) Athletic Sports—The award of marks will be decided by the Championship placing as follows :

First and Second positions	10 marks
----------------------------	----------

Third and Fourth positions	8 marks
----------------------------	---------

* Fifth and Sixth positions	6 marks
-----------------------------	---------

The mean of marks obtained by a student in each of the events of the sub groups 5, 6, 7, 8 will then be the marks obtained by the student concerned in that sub group.

4 Marks are awarded out of a maximum of 100 marks, the balance of 20 being allotted to a special sub group 9. The method of award of these 20 marks is as follows :

If a student obtains marks in X of the sub-groups 1, 2, 3, 4 and Y of the sub groups 5, 6, 7, 8, then

in the sub group 9 he will be awarded 5X or 5Y marks whichever is less *except* that, in case he obtains marks in seven out of the first eight sub-heads, he will be awarded 17 marks

*Examples*—A student in sub group 9 obtains—

- 0 marks if he gains marks in 1, 2, 3, 4 and none in 5, 6, 7, 8
- 5 marks if he gains marks in 1, 2, 3 and also in 5
- 10 marks if he gains marks in 1, 2 and also in 6, 7, 8
- 15 marks if he gains marks in 2, 3, 4 and also in 6, 7, 8
- 17 marks if he gains marks in 1, 2, 3, 4 and also in 5, 6, 7
- 20 marks if he gains marks in 1, 2, 3, 4 and also in 5, 6, 7, 8

5 The total of marks obtained in the nine sub groups will then decide the winner of Sandes Challenge Cup

- (iii) The Lion Challenge Trophy awarded to the student, irrespective of class who obtains the highest number of marks in the Annual Sports
- (iv) The Runner up Challenge Cup awarded to the student irrespective of class, who obtains the second highest number of marks in the Annual Sports
- (v) The Bradshaw Smith Challenge Cup awarded to the student, irrespective of class, who wins the Cross Country Race
- (vi) The Cross Country Race Challenge Cup awarded to the student, irrespective of class, who finishes second in the Cross Country Race
- (vii) The Verrières Challenge Cup awarded to the winning Relay Race Team, irrespective of class, at the Annual Sports
- (viii) The McLaren Challenge Cup awarded to the winning Tug-of War Team, irrespective of class, at the Annual Sports

- (ix) The Barnett Challenge Cup awarded to the Overseer Class student who obtains the highest number of marks in the Annual Sports not being a winner of either the Lion Trophy or Runner up Challenge Cup
- (x) The Single Sculls Challenge Cup awarded to the winner of this race in the Annual Regatta irrespective of class
- (xi) The Officers Challenge Cup Prince of Wales Own Sappers and Miners awarded to the winners of the Open Double Sculls in the Annual Regatta irrespective of class
- (xii) The Boating Challenge Cup awarded to the best oar of the 3rd year Civil Engineering Class or 2nd year overseer class
- (xiii) The Beer Challenge Cup awarded to the winners of the Pair Oars Race irrespective of class
- (xiv) The Challenge Fours Cup awarded to the winners of the Fours race in the Annual Regatta irrespective of class
- (xv) The Tennis Singles Challenge Cup awarded to the winner of the annual open Tennis Tournament irrespective of class
- (xvi) The Tennis Doubles Challenge Cup awarded to the winners of the annual open Tennis Tournament irrespective of class
- (xvii) The Puri Cup awarded to the winner of the annual open Squash Racquets Singles Tournament Civil Engineer Class only
- (xviii) The Squash Racquets Singles Runner up Cup awarded to the runner up of the annual open

Squash Racquets Tournament, Civil Engineer Class only

- (xix) The Mechanical and Electrical Engineer Class Challenge Cup, awarded to the student, irrespective of class, who obtains the highest aggregate in the annual Olympic contest with the Officers and British Non commissioned Officers of the King George's Own Sappers and Miners
- (xx) The Vizianagram Cup, awarded annually to the best Indian athlete of the 3rd year Civil Engineer Class
- (xxi) The Shooting Challenge Cup, awarded annually to the Section of the Platoon of the University Training Corps which obtains the highest score.
- (xxii) The Stampe Challenge Cup for inter-class athletics Open to all classes.
- (xxiii) The Inter year class football and hockey challenge cup. Open to all classes.

---

LIST OF TEXT-BOOKS.

---

## LIST OF TEXT-BOOKS FOR DIFFERENT CLASSES

Each student should own his own copy of each book marked with an asterisk and these are obtainable generally from the College Book Depot at 12½ per cent off published prices. Such books will not be obtainable on loan from the College Library. Books unmarked with an asterisk are recommended for reference and such books are obtainable on loan from the College Library.

## Particulars

War Office Manual of Field Engineering, Volume II.

"Sewage Disposal"—Kershaw

"Strength and Elasticity of Structural Members"—R. J. Woods

"Structural Engineering"—Husband and Harby

"Reinforced Concrete Simply Explained"—Oscar Faber

"Examples of Reinforced Concrete"—Oscar Faber.

## DUPLICATE CERTIFICATES

For duplicate diplomas and certificates the following charges are levied

	Rs
Diploma	24
As Assistant Engineer	24
As Upper Subordinate	16
As Overseer	16
As Lower Subordinate	8
As Draughtsman	8

# SUBSIDIARY DEPARTMENTS OF THE COLLEGE

## LIBRARY

The College Library contains about 27,000 volumes classified as under \*

### PART I

#### Scientific and Professional Works

Class AA	Pure Mathematics	Class F	Mental, Moral and
„ AB	Applied Mathema		Social Science
	tics	„ G	Civil Engineering
„ B	Physics	„ H	Surveying and
„ C	Chemistry		Drawing
„ D	Geology, Minera	„ J	Electrical Engineer
	logy and Palaeon-		ing
	tology	K	Mechanical Engi
E	Other Branches of		neering
	Natural Science	„ L	Other Professional
			Works

### PART II

#### General Literature, Art, Industries, etc

Class M	Recreations and	Class S	Commerce and Eco
	Amusements		nomics
N	Geography, Ethno	„ T	Agriculture, Fores
	graphy and Tr		try and Garden
	vel		ing
O	History	„ U	General Scientific
„ P	Literature and		and Professional
	Philology		Journals and
Q	Arts and Trades		Transactions
„ R	Fine Arts	„ X	Indian Government
			Publications

\*The above is the existing classification but a new classification according to the Dewey System is now in progress

The Library is free to all gazetted Government officers, and other outstation residents in special cases can obtain books on application

There is a printed Catalogue, and a Supplement is issued every year, which can be obtained on application to the College office

### THE COLLEGE REGISTER OF EMPLOYMENT

The College registers the names of, and supplies employers with the names of approved engineers, upper subordinates overseers, lower subordinates and draftsmen

### THE FOLLOWING INSTITUTIONS ARE ALSO MAINTAINED IN CONNEXION WITH THE COLLEGE

1 CIVIL ENGINEERING MODEL ROOMS	7 DEHRA DUN CONTINGENT,
2 METEOROLOGICAL OFFICE	AUXILIARY FORCE, INDIA,
3 WATER WORKS	ROORKEE DETACHMENT
4 COLLEGE DAIRY	8 No 15 PLATOON, 3RD
5 COLLEGE DISPENSARY	UNITED PROVINCES BAT
6 SPORTS AND ATHLETIC CLUBS	TALION, UNIVERSITY
	TRAINING CORPS, INDIAN
	TERRITORIAL FORCE

## RULES OF THE ADVISORY COUNCIL, THOMAS- SON COLLEGE OF CIVIL ENGINEERING, ROORKEE.

—————

*Re constituted under G O No 556G/XV—555 1932, dated June 2, 1933, copy received with Director of Public Instruction, letter No G/1315, dated June 2 1933 Rules approved in Director of Public Instruction, U P letter No G/1675 dated July 26, 1933 and G O, U P Edn Dept no 168C/YV—555, dated December 15, 1933*

1 The function of the Council will be to advise Government on questions of policy, organization, finance, staff buildings, equipment the formation or re constitution of classes, curricula, rules of admission and any other subject connected with the College on which Government may require its advice. As the Council will be closely associated with the College and will visit it periodically, it will also be in a position to take the initiative in suggesting improvements and reforms in respect of any of the above matters.

2 The Council will consist of —

- (1) The Chief Engineer, Public Works Department,  
Irrigation Branch
- (2) The Chief Engineer Public Works Department  
Buildings and Roads Branch
- ) The Director of Public Instruction, United Provinces
- (4) & (5) Two non official members, elected by the  
Legislative Assembly United Provinces
- (6) A representative of the United Provinces branch of  
the Institution of Engineers India

(7) A representative of University Education, nominated by the United Provinces Government

(8) A representative of the Institution of Civil Engineers London

(9) The Principal of the Mission College Roorkee

3 The senior of the two Chief Engineers shall be the President of the Council

4 The Principal of the College will be *ex officio* Secretary of the Council and shall have a right to vote

5 The term of office of non official members of this Council shall be for a period of three years provided that a member shall cease to be a member of the Advisory Council when he ceases to be a member of the body which he represents, a new election shall be held by each new Legislative Assembly at its first session and at the same time, other bodies shall be required to make their nominations

6 The committee shall meet at least once a year at Roorkee on a date to be fixed by the Principal after informal consultation with the President The Council may also hold any other meetings whenever it appears desirable to do so, at any place in the United Provinces to be fixed by the President

7 Notice of the time and place of meeting will be issued to each member by the Secretary at least 6 weeks in advance

8 Four members of the Council, exclusive of the Principal who must always be present shall constitute a quorum

*Note*—Should the quorum fail and should the President consider the meeting as constituted specially competent to discuss the issue in point the proceedings shall go forward the opinion of the other members being subsequently obtained by circular

9 The Secretary of the Council may in urgent and other cases submit matters for the opinion of the Council by correspondence

10 The proceedings of the Council after approval, will be written in a consolidated form and a typed copy of the same will be circulated to all the members and one copy submitted to Government through the Director of Public Instruction for orders

11 The Council is authorized to call in experts for the consideration of any question on which experts' advice is required, and to recommend the appointment of Sub Committees to deal with particular questions or with special branches of the work of the College. Before consulting any expert whom it is proposed to remunerate for his advice the Council should obtain the sanction of Government to the payment of such remuneration

12 The official members when attending meetings will draw travelling allowance under the rules. The non-official members will each be paid the ordinary travelling and daily allowance admissible to an officer of the first class

13 It is expected of members that they will from time to time pay personal visits of inspection to the College and thus keep in touch with its circumstances its work and its needs and aspirations

## RULES OF THE BOARD OF STUDIES, THOMAS- SON COLLEGE OF CIVIL ENGINEERING, ROORKEE.

*Approved by the Government, vide letters of the Director of Public Instruction, nos G/2423, G/3358 and G/3828 dated October 23 1925 September, 1934 and November 14, 1938 respectively*

1 The members of the Board will include the Principal, all Professors and Assistant Professors of the College. The Principal will be *ex officio* President. A Lecturer or Lecturers of the College may at the discretion of the President be co-opted for any particular meeting of the Board.

2 The meetings of the Board will be convened by order of the President.

3 The Secretary will be elected from among the members of the Board of Studies.

4 The Secretary will circulate, before each meeting, a copy of the agenda, together with all the necessary papers relating to subjects entered for discussion.

5 Any member, with the previous sanction of the President, may bring forward for discussion any subject of an academic nature pertaining to the College work.

6 The Board of Studies will be an Advisory Body, it will not exercise any control over discipline, but, in consultation with the President, will assist him in —

(a) The appointment of moderators for each external paper

(b) The scrutiny of all sessional and final pass lists of the Civil Engineer and Overseer classes, and the award of grace marks under the procedure

as laid down for their allotment by Government order

- (c) The allotment of marks for general fitness, total 200 to the students of the 3rd year civil engineer class just prior to their completing their course
- (d) The preparation or revision of all time tables, syllabuses and courses of study of all classes as the President may deem necessary

7 The President, at his discretion, may at any time consult the Board on any other subject affecting the College work

8 The minutes of each meeting will be recorded by the Secretary and read and confirmed at the following meeting

## STANDING ORDERS

## OF THE

Thomason College of Civil Engineering, Roorkee,

1942-43

and till further notice

---

General rules

*Each student upon admission to the College must make himself familiar with the following orders, and in case of any breach of these orders the plea of ignorance will not be entertained*

1 Students on arrival will report as follows —

All students of the Civil Engineer Class to the Personal Assistant to the Principal, other students, to the Superintendent of Overseer Class Hostels who will allot them quarters

2 Each student will be responsible for the state of the quarters allotted to him, and will be charged for the repair of any damage which they may sustain beyond fair and unavoidable wear and tear. Accidental injury or disrepair should be immediately brought to the notice of the Hostel Superintendent concerned with a view to its rectification. All students must vacate College quarters during the long vacation

3 No visitors, other than students of the class to which the occupier belongs, are to enter students' quarters without the sanction of the Personal Assistant to the Principal

4 Furniture, at a nominal rent, will, as far as possible, be provided for students of the Civil Engineer Class for use in the hostels, and damage to the same will be assessed by the

**Personal Assistant to the Principal** Such furniture is not to be removed from the rooms, or used for any other purpose without permission. Special furniture will be provided for the various camps. Students of classes, other than the Civil Engineer Class, will make their own arrangements for furniture.

5 All students have to engage their own servants and immediately upon appointment have to report the names of same on the correct form—obtainable from the College office—to the Personal Assistant to the Principal. The Personal Assistant maintains a black list of servants, and if any student has appointed a servant whose name is on the black list, the student will have to dismiss such servant at once and appoint another following the same procedure. Without the Principal's sanction no unauthorized persons, servants or guests will be permitted to reside in the hostels or servants' quarters or to enter them after nightfall. The wages of private servants must be paid by the 10th of each month following that for which they are due. Students are required to take a receipt for every payment made by them to their servants, whether such payments relate to wages or other accounts.

6 All information regarding text books, courses of study, dates of examinations, attendances, etc. will be found in the College Calendar and pamphlets of the courses of study and syllabi of the various classes.

7 Students are reminded that this is a College for young men and not a school for boys. Though all needful assistance will be given to those really anxious to work, it is entirely on their own exertions that their success must depend, and in cases of failure, they will only have themselves to blame. They are, however, specially warned against idleness in their first year under the expectation that they can pick

up in the second or third. The course is so laid out, that continuous application is required the whole time. Students are reminded that if they fail to make sufficient progress in their studies, or fail to pay all College dues\* on demand, they are liable to be suspended or removed from the College at any time.

The guardian of any student so suspended or removed will be held responsible for the payment of any debts whatsoever, which may have been contracted while the student was in the College. Although every precaution is taken to prevent students from running into debt, the College authorities are in no way to be considered responsible for such debts.

8. All students will attend the College regularly for studies at the hours laid down in the time tables, and for outdoor duties at the times prescribed by the Officer-in-charge of their class or their Professors, Lecturers or Instructors. No student may be absent from his quarters in the College lines without leave after 9 p.m. during the first term of any session, and 10 p.m. during the second term of any session, or before sunrise. The punishment for breaking this rule will be of the severest description. To enable the authorities to check this rule no doors should be locked at the times specified

---

\* NOTE—The words "College Dues" include—

- (i) College fee.
- (ii) Rent and conservancy.
- (iii) Rent of College furniture.
- (iv) Electric light charges.
- (v) Recreation fund subscription and cost of articles purchased from recreation stores.
- (vi) All dues in connexion with Engineers' Mess Club.
- (vii) All dues of College Dairy, College shoe maker, College shop keeper, College tailor, College sweet seller and College stores.
- (viii) All dues in connexion with common Civil Engineer class Mess.

above Students are permitted to sleep immediately outside, and in front of, their quarters during the hot weather.

9 All smoking, spitting, whistling or making any loud noise in the College classrooms, lecture theatres, laboratories or corridors, etc is strictly prohibited Students should be careful to do nothing which may interrupt, or distract others at work

10 No debts, other than College dues (see note under paragraph 7) are allowed to be contracted Students are strictly cautioned against all irregularities in money matters Flagrant cases which tend to bring discredit on the College are liable to result in severe penalties being imposed upon offending students

11 All dues from students, recoverable by the College whether payable to Government or to private funds, persons or bodies, must, for every month, be punctually discharged in full before the 21st of that month, failing which the students will be fined marks, suspended or removed at the discretion of the Principal

12 The Principal and the Officers in charge of classes will always be glad to give any help and advice in their power, and students are earnestly requested to apply to one or the other in any case where they are in doubt as to the right course before taking action Students should consult the Officers in-charge of their classes for advice before referring the case to the Principal, see Order No 11

13 Any case of personal violence by one student to another, or by a student to any other person, will be punished severely A student is never to take the law into his own hands, but is to report any grievance direct to the Officer in charge of his class for enquiry

14 Students wishing to see the Principal should apply for permission through the Officer in charge of their class. Direct application to the Principal is contrary to orders. Petitions signed by a number of students are not allowed. Any matter affecting a class or a number of students should be brought to notice by the senior student concerned.

15 Students are strongly recommended to take a fair amount of bodily exercise regularly. Too much poring over books is very apt to muddle the brain and the active duties of the Engineering profession require a man to be as well trained physically as mentally to enable him to discharge them properly. Marks are allotted for games etc.

16 The Library is open daily at the hours specified in the Library rules. Students are invited to avail themselves of it. The periodicals and papers placed on the Reading Room tables for general use are not to be removed from the rooms. Loud talking in the Library or Reading Rooms is strictly prohibited.

17 Students are forbidden even though possessing a licence to bring firearms into their quarters. Firearms may with the permission of the Principal be stored in the College armoury. No student is to bring any firearms to the College without first obtaining the Principal's permission.

18 Students may keep dogs but they must not be left loose or unattended. Dogs must invariably be chained up at night. All dogs must be registered and numbered in a register kept by the Personal Assistant to the Principal and must wear a collar and a special badge. Any dog found within the lines without a collar and badge is liable to be shot. The Personal Assistant will supply the necessary badges on request. These badges may be returned at any time when not needed and payment will be refunded.

19 Dancing, singing parties, and the playing of musical instruments in the open are not allowed without the special sanction of the Principal in every case

20 Students are warned to be very careful to have their quarters securely locked when they are absent from them or when sleeping outside during the hot weather Any case of theft either of the property of a student or of Government must be reported immediately to the Personal Assistant to the Principal The Personal Assistant to the Principal will at once request the police to take prompt action He will inform the Officer in charge of the class concerned at the first opportunity during College hours or earlier if he considers it to be necessary

21 All students are expected at all times to be dressed in a neat and tidy manner, whether in or out of class and must not appear in class in flannels or shorts used for games, etc without special permission There will be no objection to students wearing khaki shorts and long stockings during the summer, viz from April 1

22 Students should bear in mind that this is a competitive College and that any means tending to give any one student an unfair advantage must render the competition unequal and in time reduce the value of diplomas and certificates granted and affect the good name of the College For any breach of this rule severe action will be taken probably expulsion

23 Private servants are not allowed to enter the class rooms Drawing boards, etc should be taken from and made over to, servants in the verandah by the student to whom they belong Private servants are not allowed to loiter in the verandahs of the College and students are expected to see that this rule is enforced

24 Students must occupy seats at the numbered tables in the order of their standing in the class. Particular care should be taken not to splash ink on the tables walls or floors or to deface the furniture of classrooms and lecture rooms in any way by writing or cutting.

25 Students wishing to have baggage or parcels brought to the College from the Railway Station should give notice to the Personal Assistant to the Principal before 2 p.m. on the day the goods arrive. This notice should be in writing giving the number of their quarters and a detail of the baggage or parcel. The railway receipt signed and the amount due for railway carriage should be sent with the notice.

26 All students on meeting the Principal or any member of the staff of the College will salute them in a respectful manner. All students will address members of the College teaching staff Europeans and Indians, as 'Sir'.

27 In any class the student standing first in order of merit will be the senior. The senior of a class is responsible for reporting promptly to the Officer in charge of his class any unusual occurrences or circumstances connected with his class. He will take charge of survey parties and arrange all details in camps.

28 Fruit on trees on the College Estate is not to be plucked by students or their servants.

29 Two guest rooms, one for the Civil Engineer and the other for the Overseer Class are available for the use of the relatives of students on application to the Personal Assistant to the Principal who will be glad to help students in accommodating any relatives provided reasonable timely notice is given to him.

30. Students are not allowed to be members of outside societies, nor are they allowed to join in discussions on public matters except such as are organized by the Officers in charge of their class

31. Students are expressly forbidden to approach examiners, whether internal or external, with enquiries concerning marks, either prior to or subsequent to publication. After publication should any student think some error has been made, he is to submit an application in writing to the Principal on the matter through the Officer in charge of his class. Any student not observing this rule will be punished severely, probably with expulsion.

32. Students will not be permitted to appear for any external examination during their College course except to complete a university examination incompleting through sickness prior to their admission.

33. The attendance of all students at the annual College Sports and Regatta is compulsory.

34. There are the following shops generally on the College Estate —

(i) Banya's, (ii) Tailor's, (iii) Shoemaker's, (iv) Sweet meat seller's as well as a General stores Bakery Aerated water, Dairy. These have been established for the benefit of the students and under the strict supervision of the College authorities. Students are requested, in their own interests, to patronise these in preference to others.

### Leave.

35 (i) No student is allowed to leave the station\* without first obtaining written sanction of the Officer in charge of his class. Requests for leave must be made to these officers who

---

\* Note—For purposes of this order Salanganpur and Ihalgar nava taken as within the station.

will at their discretion grant such leave as is covered by College non working days or holidays. In all other cases, these officers will submit these requests to the Principal with their recommendations.

If the leave is sanctioned the Officer in charge of the class will hand over to the student concerned two copies of the permit to leave the station with orders to give one copy *personally* to his Hostel Superintendent and to hand in the other at the College Office before proceeding on leave.

On return from leave the student will report in writing to his Hostel Superintendent the date and time of his arrival. The Hostel Superintendent will send this information to the Officer in-charge of the class making any remarks that he may think to be necessary.

In ordinary circumstances all requests for leave must be submitted before noon on the day prior to that on which leave is required. All requests for leave which are not submitted in the prescribed period will be sanctioned or recommended by the Officer in charge of the class, as the case may be in very special circumstances regarding which the student has produced cogent reasons.

35 (ii) When the period of leave required includes any College class attendance periods or College functions at which the attendance of a student is compulsory, the student before approaching the Officer in charge of his class for the leave must obtain permission of the members of the staff concerned with the particular periods or compulsory College function in writing and this must be shown to the Officer in-charge of the class before the request is made.

30 Students are not allowed to be members of outside societies nor are they allowed to join in discussions on public matters except such as are organized by the Officers in charge of their class

31 Students are expressly forbidden to approach examiners whether internal or external, with enquiries concerning marks either prior to or subsequent to publication. After publication should any student think some error has been made he is to submit an application in writing to the Principal on the matter through the Officer in charge of his class. Any student not observing this rule will be punished severely probably with expulsion.

32 Students will not be permitted to appear for any external examination during their College course except to complete a university examination uncompleted through sickness prior to their admission.

33 The attendance of all students at the annual College Sports and Regatta is compulsory.

34 There are the following shops generally on the College Estate —

(i) Bazaars, (ii) Tailors (iii) Shoemaker's, (iv) Sweet meat seller's as well as a General stores Bakery Aerated water, Dairy. These have been established for the benefit of the students and under the strict supervision of the College authorities. Students are requested, in their own interests, to patronise these in preference to others.

### Leave

35 (i) No student is allowed to leave the station\* without first obtaining written sanction of the Officer in charge of his class. Requests for leave must be made to the officers who

---

\* NOTE—For purposes of this order to leave camp and to leave the station

will at their discretion grant such leave as is covered by College non working days or holidays. In all other cases these officers will submit the requests to the Principal with their recommendations.

If the leave is sanctioned the Officer in charge of the class will hand over to the student concerned two copies of the permit to leave the station with orders to give one copy personally to his Hostel Superintendent and to hand in the other at the College Office before proceeding on leave.

On return from leave the student will report in writing to his Hostel Superintendent the date and time of his arrival. The Hostel Superintendent will send this information to the Officer in charge of the class making any remarks that he may think to be necessary.

In ordinary circumstances all requests for leave must be submitted before noon on the day prior to that on which leave is required. All requests for leave which are not submitted in the prescribed period will be sanctioned or recommended by the Officer in charge of the class as the case may be in very special circumstances regarding which the student has produced cogent reasons.

35 (ii) When the period of leave required includes any College class attendance periods or College functions at which the attendance of a student is compulsory the student before approaching the Officer-in charge of his class for the leave must obtain permission of the members of the staff concerned with the particular periods or compulsory College function in writing and this must be shown to the Officer in charge of the class before the request is made.

35 (iii). Students are warned that absence without leave is a serious breach of rules. At the commencement of any College attendance period the senior student present will at once report to the member of the staff taking such period the absence or sickness of any student.

35 (iv). To obtain leave and proceed on short leave, and then to ask for an extension, *except on the most urgent grounds*, is a practice considered highly objectionable in Government service and the College authorities take the same view. The mere dispatch of an application for extension is no excuse for failure to return on the proper date. A sanction to the extension by the Principal is necessary, and to obtain this, each application should be accompanied by a stamped addressed envelope, and all telegrams are to be prepaid. These should be dispatched to the Principal early enough for the applicant to receive a reply in time. *If no reply is received the application for extension should be considered as refused.* Students who, being on leave, fail to return to the College on the day on which the leave expires without receiving sanction to an extension, will be considered guilty of disobedience of orders and will be punished accordingly.

35 (v). Students are not required to apply for leave to enjoy sanctioned holidays in the Station or for the Vacation out of the Station. No leave will be given to attend the weddings of relatives.

---

### Sickness

36 (i). The College Medical Officer will attend at the College Hospital at the following times:—

(1) 1st half session	.. 1	Daily 7.30 a.m. to
October 16 to February 14	.. 1	8.30 a.m.

- |                        |                  |
|------------------------|------------------|
| (ii) 2nd half session  | 1 Daily 7 a m to |
| February 15 to July 14 | 1 8 a m          |
| (iii) Vacation         | 1 Daily 7 a m to |
| July 1 to October 15   | 1 8 a m          |

The College Hospital Compounder will attend at the College Hospital daily throughout the year from 7 a m to 12 noon and in addition during the—

- |                                    |                            |
|------------------------------------|----------------------------|
| (i) 1st half session               | Daily 5 p m to 6 p m       |
| (ii) 2nd half session and vacation | Daily 5 30 p m to 6 30 p m |

The College Medical Officer as soon as possible after his hours of attendance will submit his daily sick reports as follows —

- (i) One to the Principal reporting all who are sick
- (ii) One to the Officer in charge of the Civil Engineer class reporting only those Civil Engineer students who are sick
- (iii) One to the Headmaster Overseer class reporting only those Overseer class students who are sick
- (iv) One to the Officer in charge Physical training when the same is going on including only names of Civil Engineer and Overseer class students who are sick or are exempted from Physical training

36 (ii) (a) All students who require medical attendance are to present themselves at the College Hospital during the hours of attendance of the College Medical Officer

(b) Those who are too ill to attend personally are to send notice to the College Medical Officer at the College Hospital during his hours of attendance when the Medical Officer will visit them at their quarters

(c) Those who fall ill either before or after the hours of attendance of the College Medical Officer are to report

themselves to the College Hospital and to see the Compounder. They are then to carry out the instructions given them by the Compounder, who is to report all such cases to the Medical Officer when next in attendance. The Medical Officer will keep in attendance at the College Hospital a peon at all hours when the Compounder is not present, whose duty it will be to call the Compounder from his quarters.

(d) If a student be compelled to absent himself from class attendance on account of illness or if during College hours obtains permission to leave for the same reason, he is to report at once to the College Hospital [*vide* section (c) above].

(e) In really serious cases the students will send notice to the College Hospital and it will be the duty of the Compounder to at once send for the Medical Officer, and when the Compounder is off duty, he is to arrange for a peon to be left at the College Hospital, who can either call the Compounder or the Medical Officer, as the case may be. The Medical Officer's address is the Roorkee Civil Hospital.

36 (iii) A student placed on the sick list will remain on the sick list till taken off by the Medical Officer. He will report daily at the Hospital at the specified hour while on the sick list, unless specially exempted by that Officer. Students on the sick list excused from work or attendance at College are not permitted to leave their quarters, except for medical purposes, without the written authority of the Medical Officer, initialed by the Principal. On the written application of the Medical Officer, the Personal Assistant to the Principal is authorized to erect a necessary tent near the quarters of any sick student.

36 (iv) Students who have been frequently sick during the year will lose marks for physical fitness.

36 (v) All Indian servants belonging to the College or to students who require medical treatment should attend at the Hospital during the authorized hours

36 (vi) No student may be treated privately All cases of sickness must be reported and entered on the Sick report Any student concealing a case of sickness will be severely punished

36 (vii) The College Medical Officer will visit the hostels, cook houses latrines and grounds once a week as also the dairy and shops, to see that the sanitary arrangements etc are properly carried out, and will send a report every Monday morning to the Principal concerning any defects he may observe or any improvements that he may wish to suggest

---

### Examinations

37 (i) *The work given in by students at examinations, projects or at any time during the course is accepted as their own honest and unaided work, any attempt to deceive the Staff about it in any way whatever will, on detection, be punished by immediate expulsion No excuse whatever will be accepted*

37 (ii) Any student not present at any examination from whatever cause will lose all marks for the same

37 (iii) Appraising the answers to an examination is a very tedious and difficult matter, and each slovenly set of answers wastes time and temper, and causes all to suffer The following rules which are really in favour of good, honest and neat work will be strictly enforced, and marks deducted in each case in which they are infringed or not acted up to —

(a) Carefully read and minutely adhere to the instructions printed on the cover of the answer books

issued to students These instructions are as follows —

- (i) Number your answers to correspond with the numbers of the questions, and if the question is divided into sub heads, be careful to number these
- (ii) No part of this book is to be torn off
- (iii) The whole of the work, including all rough work, is to be written in this book
- (iv) No writing whatever is allowed on any other paper, except squared paper when required for an answer Each sheet of squared paper must be headed as required under regulation (A) or (B) of the answer book
- (v) The paper should be ruled or folded, so as to make a margin on the left hand side
- (vi) The handwriting should be distinct
- (vii) Only one side of the paper is to be written upon  
The odd numbered pages, starting with page 1 are to be used for answers and the even numbered pages may be used for rough work, if required, otherwise may be used for answering the questions
- (viii) In the event of this book becoming filled up another book must be used and the number used written below There is a tendency amongst students to waste their own and the examiners time by writing unnecessary lengthy answers by needless repetition and by using a large number of answer books It should seldom be necessary to use more than one answer book All answers should be as concise as possible and, if sufficient thought

is exercised before the answer is committed to paper all repetition can be avoided. Careless and lengthy answers will entail a loss of marks.

- (ix) These books are not to be folded but forwarded flat and if more than one book is used by the same student the second and succeeding books must be *tagged with the first*.
- (x) Students with roll numbers using this book are not to make any allusion to their names or initials, or to make any marks by which they may be identified.
- (xi) The index on the inside of the cover of this book must be carefully filled in. Students must fill in against each question attempted the word 'answered'. In the case of questions having separate parts (a), (b) (c) each separate part attempted should be indexed as 'answered'. Nothing should be entered against questions which have not been attempted.
- (b) In sessional and final examinations each student will be given a roll number to use instead of his name. This must be written in the right hand top corner of the cover of *each* book. The number of each question must be written in the margin of each page.
- (c) The examiner will mark under three heads —
  - (i) Knowledge of the subject
  - (ii) Accuracy in working
  - (iii) Clearness of working and expression

If the student fails in (c) (iii) even though perfect in (c) (i) and (ii), he will lose marks. He is bound to show clearly

how he obtained his results, and the examiner has no time to waste marking slovenly work or roundabout methods

Take a mathematical examination for example —

(i) Each process should be headed with a word or two of explanation

(ii) All work having to be done in the book, each step of calculation that cannot be done in the head must be done on the even numbered pages

(iii) All work known to be useless must be scored out

(iv) The answer must be plainly marked Write the word 'answer' opposite the answer in each case thus Ans — "

(d) Students must bring their own pens, inks, pencils and drawing instruments The use of slide-rules may be permitted at the discretion of the examiner No borrowing from each other is allowed during an examination

(e) No books or papers of any sort are to be brought into the examination room Logarithm tables graph and drawing paper, when necessary, will be provided

(f) No student may leave his seat for any reason except to quit the room After having once left the room, for any reason whatever, he cannot return A student wanting another book will call an attendant who will bring it to him

(g) When time is up the examiner will call out, "cease writing" after which order, pen must not be put to paper for any purpose whatever

(h) The use of red ink or of coloured pencils should be avoided as far as possible as the examiner usually makes corrections in coloured pencil

## Project Regulations (including Tours)

### *Notes for the guidance of students in drawing up Projects*

38 (i) *The collaboration of students during Projects is forbidden and in this connexion attention is expressly drawn to Standing Order No 37 (i) and to the penalty for its infringement. It must be remembered that Projects are competitive examinations subject to the ordinary examination rules. Students are warned that they are allowed to obtain assistance solely from (a) technical books in general, (b) plans and models in the Model Room and Library, and (c) plans of any existing engineering work which they may obtain from a source, which is equally open to other students of their year.\**

*It is forbidden to obtain survey maps or level charts from outside sources, or any assistance in designing or calculating from outside the College. Students are not permitted to obtain previous engineering projects executed by past students for the purpose of assisting them in their work. Finally, in the absence of specific project regulations, the best guide to a student's conduct is his own sense of honour.*

38 (ii) *A project is expected to be a piece of work such that a senior officer can examine, criticize, pass orders on it, and hand it over for execution. To ensure this result it must be complete in every sense. It must include a clear concise report with cross references to all drawings; a survey which can be checked with ease and celerity, and drawings from which work or working drawings can be produced and from which the estimate can be checked. The drawings must be neat, but should have no unnecessary elaboration. Calculations should be given for all important structural items. A student must carefully think out his work. Having gone over*

---

\* *Vide Standing Order No 2<sup>o</sup> such plans etc should, in any case, be shown to the Professor of Civil Engineering.*

the ground he should scheme out his survey. To ensure that he has time to submit all necessary work, all work in the field must be done neatly and methodically.

38 (iii) Having completed the field work the student is required to complete his project in the College. Work on drawings in quarters is not permitted but this does not prevent a student from thinking out his designs, and making sketches and calculations in his spare time. He must again map out a methodical scheme if he is to submit a complete project. Every drawing should be numbered, with a heading showing what it represents. A scale should be shown on each drawing and sufficient dimensions should be given both for the estimate and for actual work. References to conventional signs need only be shown on one sheet for the whole project.

38 (iv) Above all, the student should endeavour to show a sense of proportion as regards the relative importance of the various portions of his work. The whole of such details as galvanized or tiled roofs, railings, gateways etc. should be drawn sufficiently to show the style proposed. All calculations for applied mechanics should be fastened together and full references given in the text to all drawings. All details necessary to check the calculations should be given. All calculations referring to a particular design should run concurrently, and be prefaced by a clear statement of the data connected with that design. No calculations should be shown on the drawings, but magnitudes of the forces represented should be clearly shown. No marks will be allotted for applied mechanics drawings which are not accompanied by calculations in the report. The important details in drawing, the finished survey, estimate, calculations and report should all be completed first. Cross references and headings should be carefully given so that it may be easy to follow from the

report or estimate to what reference is being made. Any leisure time can then if desired be devoted to type drawings of well known details and to generally beautifying, cleaning and elaborating the drawings. The cleaning of drawings by servants or menials is forbidden.

38 (v) The senior student is responsible for the discipline of the camp. He will at once report any authenticated case of a breach of the camp regulations and pending the arrival of instructions from the Officer in charge of the class he is empowered to issue such instructions to students or to khalkies as he may consider necessary.

38 (vi) Until a student has finally completed his field work in camp he is not permitted to visit Roorkee unless specially authorized to do so by the Officer in charge of the class. If a student on account of absolutely imperative circumstances desires to visit Roorkee on leave from the project camp he must submit a written application on a leave application form for leave at least 24 hours before he desires to quit the camp, and he is not authorized to proceed on leave until he has received the necessary permission. Such leave will only be granted in very exceptional cases and on receipt of conclusive evidence that it is absolutely necessary.

38 (vii) Students in camp are not compelled to work on Sundays or on general College holidays, but they are allowed to do so. *No extension of time in camp or in College will be given to such students as observe these holidays.*

38 (viii) No work, however, is permitted in the College-rooms on Sundays after the return from camp though such days may be utilized for work which is permitted in quarters.

38 (ix) All students while in camp are to keep a diary showing each day the hour of leaving camp and the hour of return, the nature and extent of the survey or other work

executed, giving the names of any villages or other prominent points visited, and any other concise information useful to an examiner in checking the progress of the work. *The diary must always be on the person of the student* so that it can be produced at once when demanded, and it must be kept up to date and must be written in ink.

38 (x) Students should leave camp for work not later than 8.0 a.m. daily.

38 (xi) Every endeavour should be made to avoid giving offence to villagers near the camp or elsewhere by needless destruction of crops or by other damage. Poultry must not be shot without permission of the local villagers.

38 (xii) Every camping ground is to be kept clean. The second senior student will be responsible for the supervision of sanitation under the direction of the senior student. Paper, etc. must not be left lying about. Fires are not to be lighted inside the limits of the camp or near tents. Tins of oil are not to be kept in Government tents. Lamps must not be placed on tables, where there is a danger of the tent catching fire. Before a storm all lamps must be extinguished.

38 (xiii) Necessary tents should be located on the side of the camp away from the direction from which the prevailing wind blows and should be, if possible, 100 yards or more from the camp.

38 (xiv) The purity of the water supply for drinking and cooking should be carefully ensured. Drinking water should be boiled before use. The washing of clothes should not be permitted near a well from which the supply of drinking water is drawn, and in the case of streams the washing of clothes must take place down stream of the drinking water site.

38 (xv) After return to the College all students have to work in the College on the preparation of the project during

Necessary tents are for Indiana only

*Furniture*—Each student will be allowed 1 bed 1 mattress 1 folding chair and 1 folding table (the latter two being camp furniture) Club and Mess tents will have collapsible tables

38 (xviii) Two dak coolies for the camp, one of whom will report daily to the senior student will be allowed, provided the camp is within a 15 mile limit, and three dak coolies for a 20 mile limit

38 (xix) An allowance of Re 1 per mile for the survey is sanctioned to each student for the cost of flags pegs etc subject to a maximum of Rs 10 No other contingent charges are admissible and this also includes such items as stationery, portfolios etc

38 (xx) Students who are unable to finance themselves can on applying in writing to the Principal receive an advance up to Rs 50 for payment to khallasies This sum will be deducted from the total of the bill on the close of the project The success with which students manage their coolies and make their camping arrangements will be considered in awarding marks for 'Fitness for Department'

38 (xxi) Instruments as required will be issued to each student each instrument bearing the class number of the student The student will be personally responsible for these instruments being in adjustment and in good working order Any damage sustained will be made good by the student and he will not be permitted to exchange his instrument or stand with another student and no student will be permitted to lend out his instrument The damaged instrument with a report must be sent immediately to headquarters

Students will always accompany their khallasies proceeding to and returning from work In inclement weather instruments should be put away in their boxes and the boxes protect-

ed from rain, sun and dust. When an instrument is kept standing for some time in the sun, the cloth bag should be placed over it for protection. Level staves should be crumpled together when not in use, and they should not be leant against walls and trees, but placed horizontally on the ground and protected from dew, rain and white ants.

38 (xxii) Except level staves, plane table stands and chains, no instrument should be carried on carts. The khalassies must be utilized for conveying such instruments to the field and back to headquarters. Plane tables may be placed face to face and taken in a spring cart, but this only when the student himself is travelling with them.

38 (xxiii) The boundaries of all fields must be surveyed provided they come within the specified limits of the alignment, submerged area, etc. Village boundaries must also be defined, these are usually shown on the guide map or index map issued. Traverse work and triangulation must be based on true north and the magnetic variation at the time should be clearly noted on each map and drawing. Every use should be made of embedded stones, plinths of building, etc. as bench marks in levelling, even if such objects are to some extent without the limits of the work.

38 (xxiv) Plane table sections, note books, etc. must have the roll number of the students clearly written on them. All plane table sections and records must be kept up to date in ink, and index and cross reference work should be made in the field. Level and traverse field books must be recorded in ink in the field.

38 (xxv) If a chain be used, the chain should be checked daily and the chain error noted in the field book. Levels should be tested for adjustment daily.

38 (xxvi) All calculations for curves, azimuths, etc. should be contained in the survey note book.

38 (xxvii) Students will see that as little damage as possible is inflicted on standing crops, and if chaining be necessary through such crops, the chain should be lifted, not *dragged*, from arrow to arrow. The instrument should be set up as near as possible to the line of demarcation between fields to avoid repeated trampling down of wheat, gram, etc.

38 (xxviii) Khalassies will be enlisted at Roorkee, and they will be entitled ordinarily to one day's leave per week, if the project be within 12 miles of Roorkee, or two days in a fortnight if beyond this limit. The day or days for leave is one for the student to arrange. Khalassies will receive pay at the prevailing rates for labour and tindals (one per squad of 4 men) will, if recommended, receive pay at the rate of Re 1 extra per mensem. Each khalassie can obtain a record sheet which will entitle him to prior claim for enlistment for both the triangulation and project camps. A tindal on a higher rate of pay loses claim to the extra allowance if he absents himself from any of the above camps. Khalassies will, after engagement, receive an advance of Rs 2 and will, after the advance has been paid, work in arrears of pay and obtain other advances against the final payment. A student engaged on independent work will, if circumstances allow, have a squad of 4 men. He will not be permitted to work with more.

38 (xxix) Civil Engineer and Overseer class students of the Thomason College of Civil Engineering, Roorkee, when proceeding on tours in connexion with project work or to visit works of interests, are entitled to travelling allowance at the following rates —

*A—Civil Engineer class students—*

- (i) Railway fare at single intermediate concessional rates applicable to students travelling in parties

and when such rates are not available then a single intermediate class fare for each student

- (ii) Actual expenses for road journeys to the limit of mileage allowance admissible to officers of third class viz annas two per mile
- (iii) Annas fourteen per night per student if detained in a town while on tour
- (iv) Single third class railway fare for rail journeys and one anna per mile for road journeys for each servant at the rate of one servant for every five students and subject to a limit of four servants for a party of over 15 students

*B—Overseer class students—*

- (i) Single fare of the third class for journeys by rail and one anna per mile for journeys by road
- (ii) Daily allowance at the rate of eight annas for halts outside headquarters

Students when not accompanied by a member of the College staff will be under the charge of the senior student

### Workshop Rules

39 (i) Every student attending the Workshop course will be allotted a special number. On entering the shop he will be given a corresponding ticket. He will make the ticket over to the Foreman Instructor when taking his tools and receive it back when he has returned them correct at the close of the period. Upon completion of the period each student will check with and hand over to the Foreman all tools. When leaving the Workshops each student will give up his ticket at the gate.

39 (ii) Breakages and injuries to tools machines and Government property generally must in all cases be reported at once to the Lecturer in charge

38 (xxvii). Students will see that as little damage as possible is inflicted on standing crops, and if chaining be necessary through such crops, the chain should be lifted, not *dragged*, from arrow to arrow. The instrument should be set up as near as possible to the line of demarcation between fields to avoid repeated trampling down of wheat, gram, etc.

38 (xxviii) Khalassies will be enlisted at Roorkee, and they will be entitled ordinarily to one day's leave per week, if the project be within 12 miles of Roorkee, or two days in a fortnight if beyond this limit. The day or days for leave is one for the student to arrange. Khalassies will receive pay at the prevailing rates for labour and tindals (one per squad of 4 men) will, if recommended, receive pay at the rate of Re 1 extra per mensem. Each khalassie can obtain a record sheet which will entitle him to prior claim for enlistment for both the triangulation and project camps. A tindal on a higher rate of pay loses claim to the extra allowance if he absents himself from any of the above camps. Khalassies will, after engagement, receive an advance of Rs 2 and will, after the advance has been paid, work in arrears of pay and obtain other advances against the final payment. A student engaged on independent work will, if circumstances allow, have a squad of 4 men. He will not be permitted to work with more.

38 (xxix) Civil Engineer and Overseer class students of the Thomasoo College of Civil Engineering, Roorkee, when proceeding on tours in connexion with project work or to visit works of interests, are entitled to travelling allowance at the following rates —

A—*Civil Engineer class students*—

- (i) Railway fare at single intermediate concessional rates applicable to students travelling in parties.

and when such rates are not available then a single intermediate class fare for each student

- (ii) Actual expenses for road journeys to the limit of mileage allowance admissible to officers of third class viz annas two per mile
- (iii) Annas fourteen per night per student if detained in a town while on tour
- (iv) Single third class railway fare for rail journeys and one anna per mile for road journeys for each servant at the rate of one servant for every five students and subject to a limit of four servants for a party of over 15 students

*B—Overseer class students—*

- (i) Single fare of the third class for journeys by rail and one anna per mile for journeys by road
- (ii) Daily allowance at the rate of eight annas for halts outside headquarters

Students when not accompanied by a member of the College staff will be under the charge of the senior student

---

### Workshop Rules

39 (i) Every student attending the Workshop course will be allotted a special number. On entering the shop he will be given a corresponding ticket. He will make the ticket over to the Foreman Instructor when taking his tools and receive it back when he has returned them correct at the close of the period. Upon completion of the period each student will check with and hand over to the Foreman all tools. When leaving the Workshops each student will give up his ticket at the gate.

39 (ii) Breakages and injuries to tools machines and Government property generally must in all cases be reported at once to the Lecturer in charge.

39 (iii) Materials for instructional work will be issued to students by the Foreman with instructions regarding the work to be done. On completion of the work it must be shown to the Lecturer and approved before a more advanced exercise can be given.

39 (iv) Students are prohibited from working on any machine unless especially authorized in this respect by the Lecturer in charge or the Foreman of the shop.

39 (v) Loose clothing and *puggies* may not be worn in the Workshops.

39 (vi) Students must not enter any shop other than that in which their class is working without permission from the Lecturer in charge.

*Rules regarding student's independent work in the College Workshops*

39 (vii) Every student wishing to do private work must first show to the Assistant Professor in charge a fully dimensioned sketch of the article he wishes to make. If sanctioned by the Assistant Professor the job will be given a workshop number and material issued for it.

39 (viii) All articles being made and the materials issued must on no account be removed from the Workshop by students but must be left in charge of the Shop Foreman. When any article is complete it must be handed over to the Assistant Professor, and if satisfactory after examination by him it will be issued to the student who made it.

39 (ix) Private work must not be done during hours allotted to Workshop Practice.

---

**Laboratory Rules**  
*General*

40 (i) The greatest care must be taken in handling and using all apparatus any breakage or damage which occurs

must be reported at once to the Professor or Lecturer. Any damage or loss resulting from carelessness will be charged to the student or students responsible for it.

40 (ii) After finishing any experiment, the student or students must replace in their proper positions all parts of the apparatus and reagent bottles used. The whole apparatus is to be replaced in its case if there be one. When using boxes of weights especial attention is drawn to this rule.

40 (iii) When working the benches, etc. must be kept as clean as possible, students being careful to avoid any unnecessary dirt or mess.

40 (iv) Students must enter in a laboratory note book, especially kept for the purpose details of each experiment performed by them during or immediately after its completion. Such rough notes must be recopied, kept up to date, and be always ready for inspection when required. In the Physical and Electrical Laboratories after finishing an experiment, students must mark it off on the form put up in the laboratory for the purpose.

40 (v) Students must do all experimental work entirely independently. All necessary explanations, etc. will be given by the Professor or Lecturer. Consultation between students is strictly forbidden during experimental work except when two or more students are ordered to conduct an experiment together.

40 (vi) All apparatus, chemicals, etc. are supplied free to students, but any breakage or damage will be charged to the student or students responsible for it.

#### *Chemical Laboratory Rules*

40 (vii) Each student must provide himself with a rough note book, a piece of platinum wire, a dustier, padlock and key.

39 (iii) Materials for instructional work will be issued to students by the Foreman with instructions regarding the work to be done. On completion of the work it must be shown to the Lecturer and approved before a more advanced exercise can be given.

39 (iv) Students are prohibited from working on any machine, unless especially authorized in this respect by the Lecturer in charge or the Foreman of the shop.

39 (v) Loose clothing and puggies may not be worn in the Workshops.

39 (vi) Students must not enter any shop other than that in which their class is working without permission from the Lecturer in charge.

*Rules regarding student's independent work in the College Workshops*

39 (vii) Every student wishing to do private work must first show to the Assistant Professor in charge a fully dimensioned sketch of the article he wishes to make. If sanctioned by the Assistant Professor the job will be given a workshop number and material issued for it.

39 (viii) All articles being made, and the materials issued, must on no account be removed from the Workshop by students, but must be left in charge of the Shop Foreman. When any article is complete it must be handed over to the Assistant Professor, and if satisfactory after examination by him it will be issued to the student who made it.

39 (ix) Private work must not be done during hours allotted to Workshop Practice.

---

**Laboratory Rules**

*General*

40 (i) The greatest care must be taken in handling and using all apparatus. Any breakage or damage which occurs

must be reported at once to the Professor or Lecturer. Any damage or loss resulting from carelessness will be charged to the student or students responsible for it.

40 (ii) After finishing any experiment, the student or students must replace in their proper positions all parts of the apparatus and reagent bottles used. The whole apparatus is to be replaced in its case if there be one. When using boxes of weights especial attention is drawn to this rule.

40 (iii) When working the benches etc. must be kept as clean as possible, students being careful to avoid any unnecessary dirt or mess.

40 (iv) Students must enter in a laboratory note book, especially kept for the purpose, details of each experiment performed by them during or immediately after its completion. Such rough notes must be recopied kept up to date and be always ready for inspection when required. In the Physical and Electrical Laboratories after finishing an experiment, students must mark it off on the form put up in the laboratory for the purpose.

40 (v) Students must do all experimental work entirely independently. All necessary explanations etc. will be given by the Professor or Lecturer. Consultation between students is strictly forbidden during experimental work except when two or more students are ordered to conduct an experiment together.

40 (vi) All apparatus chemicals etc. are supplied free to students but any breakage or damage will be charged to the student or students responsible for it.

### *Chemical Laboratory Rules*

40 (vii) Each student must provide himself with a rough note book, a piece of platinum wire, a dustier, padlock and key.

and a copy of each of the prescribed text books. Keys of the padlocks should be labelled and left with the Lecturer.

40 (vii) Students should be careful not to waste chemicals, either by spilling them about, or by using unnecessarily large quantities.

40 (ix) All experiments giving rise to poisonous or obnoxious fumes must be performed in the fume chambers.

40 (x) Students are advised, when heating either solids or liquids in test tubes, to direct the mouths of the tubes to wards the reagent shelves, in order to prevent any accident occurring to their neighbours.

40 (xi) Students are on no account to touch the switches regulating the ventilation of the fume chambers.

#### *Laboratory Balance Room Rules*

40 (xii) Students, when weighing, should always place the article to be weighed on the scale pan on the *left* hand side of the balance and the weights on the *right* hand side.

40 (xiii) Chemicals are on no account to be placed directly upon the scale pans. Chemicals to be weighed should be either put upon a watch glass, or placed in a weighing bottle. Everything to be weighed should be *scrupulously clean and perfectly dry*.

40 (xiv) When weighing, the balance pans should be *slowly and carefully* released. The weights are *never* to be placed upon the scale pan while the balance pans are free to swing.

40 (xv) The weights are on *no account* to be touched with the fingers but should be removed by means of the *cil*pers furnished with each box of weights.

40 (xvi) During the process of weighing the weights are to be removed, one by one, from the weight box and *carefully* placed upon the balance pan. Weights must not be placed upon the top of each other.

40 (xvii) Check the result of each weighing by adding together the weights removed from the weight box, then carefully remove weights from the balance pan

40 (xviii) All results must be carefully recorded in a note book and not on scraps of paper which are liable to be lost

40 (xix) Students when they have finished weighing, should remove the rider from the beam of the balance, see that the balance pans are not free to swing, close the balance, replace the balance cover, and see that all the weights are correctly placed in the weight box

40 (xx) Hot crucibles are *on no account* to be put upon the balance pans. Crucibles should be allowed to cool in a desiccator

40 (xxi) Apparatus should *not* be left upon the balance tables

40 (xxii) Should any of the balances be defective, the matter should be reported *at once* to the Professor or Lecturer

#### *Engineering Laboratory Rules*

40 (xxiii) The accuracy of the machines and instruments, depending chiefly upon their correct adjustment, students are forbidden to tamper with them in any way

40 (xxiv) Steam valves must never be opened except in the presence of a member of the staff. Serious accidents have happened in the past through non observance of this rule

40 (xxv) Reports of tests will be submitted on the day following that on which the tests were made. The report, with any corrections, will be returned to the student, after checking on the student's next attendance at the laboratory

#### *Survey Laboratory Rules*

40 (xxvi). The greatest care must be taken in handling and using all survey instruments. Any leakage or damage which occurs must be reported *at once* to the Assistant Profes

son or Lecturer A student is personally responsible for any instrument issued to him, and when kept by him in his quarters he should see that it is put in a safe place and not where it is likely to be knocked over by his servant in cleaning the room. No instrument should be left unattended in the field. In going to or returning from work in the field *students (except Civil Engineer Class, 3rd Year) must, on no account, hand their instruments over to servants to carry*. Any damage done to an instrument must be made good by the student to whom the instrument was issued, and, in the case where students are working in parties, the cost will be divided among the members of the party, unless it can be shown clearly that one or other of the party was directly responsible for the damage done. In addition to having to pay for the damage caused, the student or students will have marks deducted either from their "Fitness for department" or "Survey" groups or from both.

#### College office

41 (i) Students are strictly prohibited from entering the College office rooms. Any work which they may have with the office should be transacted over the counters.

41 (ii) A bill for all College dues will be sent to all the students before the time fixed for payment of such dues every month.

41 (iii) All payments must be made by students in person at the counter of the College Treasury, between the hours of 11 a.m. to 3 p.m. on the days as may be ordered.

Cheques on listed banks in payment of dues will be accepted in the case of dues from October to May provided cashing charges are included. Dues for June and July must be paid in cash.

The College cashier will grant a receipt for the amount paid.

As far as possible the students must bring the exact amount due, to avoid any delay in transaction at the counter.

## Central Library Rules

### *General*

42 (i). The Library is maintained for the use of the Staff and students of the College. It is also available to Gazetted Government officers resident in Roorkee, and, under restrictions, to the general public resident in Roorkee. Books are issued for reference purposes and on loan in accordance with these rules.

42 (ii). Certain works of reference can only be consulted in the Library and Reading rooms, and may not be removed from these rooms without the sanction of the Principal.

42 (iii). No book will be issued on loan from the Library until a signed receipt for the same has been handed to the Librarian; this receipt will be returned when the book is given back.

42 (iv). Books are liable to be recalled at any time by the Librarian. A new book may only be kept for 7 days. The term 'new book' is one which has been received within six months of the date of issue.

42 (v). The transfer of books on loan to any other person is prohibited.

42 (vi). Persons making use of the Library are forbidden to remove books from the shelves. The Librarian on being informed of its catalogue number will supply any book required.

42 (vii). The Library will be closed annually to the issue of books from approximately July 5 to 15. All books out on loan must be returned not later than July 5.

42 (viii). Persons damaging or losing books will be charged with the full value of the same. The practice of marking or scribbling in books is strictly prohibited.

42 (ix) Persons infringing any Library rules are liable to be denied the use of the Library.

42 (x) The Library is open daily during the College session, Sundays and holidays excepted, for the issue and return of books from 11 a m to 3 p m During the vacation it is open on Thursdays only from 9 a m to 11 a m The Reading rooms are open daily during the College session from 8 a m to 4 p m , except on Sundays and holidays

---

### SPECIAL

#### *College Educational Staff*

42 (xi) A special issue of books for departmental use for periods not longer than one session is allowable to Professors and Heads of College departments provided the number issued to any one department does not exceed twenty at any one time Such a special issue will require the sanction of the Principal Normally, in order that students should be able to consult any technical book, such books, if taken out by any member of the Staff, should be returned *within one month*, except as in Rule 42 (iv) If the Professor is of opinion, when he takes out the book, that he will require the use of it for longer than one month, he should put up an indent for a duplicate copy for the Central Library (chargeable to his laboratory grant) within one week of the issue of the book

42 (xii) All members of the Educational Staff are entitled to *keep books on loan to a limit of eight volumes*

42 (xiii) Applications for works already on loan will be registered by the Librarian, and on return will be issued to the applicants in order of priority.

42 (xiv) The members of the Educational Staff are exempted from Rule 42 (vi) and are permitted to remove books from the shelves, but not from the Library without signing the usual form and depositing same with the Librarian

### *Students*

42 (xv) Text books on sale at the Book Depot will not be issued to students

42 (xvi) Students are not permitted to retain any book for a period longer than 14 days except as in Rule 42 (iv) and 42 (xx) Re issues of any book after it has been returned will not be made to the same borrower until after the lapse of 7 days Students are entitled to keep books on loan up to the limits for the different classes given below, but no book may be retained for a period longer than 14 days

Engineer class	5 vols
Overseer class and Draftsman class	8 vols

42 (xvii) Rule 42 (xiii) is also applicable to students for scientific works

42 (xviii) For the vacation books may be issued to students, up to a limit of 3 only, with the sanction of the Principal

42 (xix) Students borrowing books containing plates must personally check the number of plates and enter the actual number on the receipt The plates are to be checked again when the book is returned Books returned one day will not be re issued till 3 clear days have elapsed, except as in Rule 42 (xx) In order to obtain and return books students must attend in person

42 (xx) Students of all classes working on projects may only borrow 3 volumes at a time and are allowed to keep the

same for 3 clear days only. Books returned one day may not be issued before the following day to these students

### *Residents*

42 (xxi) Members of the general public resident in Roorkee may, with the approval of the Principal, borrow books. The applications of non-commissioned officers and soldiers stationed in Roorkee should be submitted to the Principal through their Commanding Officer

42 (xxii) All residents of Roorkee entitled to use the Library under any of these rules may keep books on loan up to a limit of six volumes, no book being retained for a longer period than one month, except as in Rule 42 (iv)

42 (xxiii) Residents about to leave the station, even for a short period must return all Library books

42 (xxiv) The term 'Members of the general public resident in Roorkee' means a head of a family, and the term includes his family but not as separate residents

### *Non residents*

42 (xxv) The Library, excluding works of fiction, is available to gazetted Government officers and other out station residents, in special cases, on application to the Principal, at whose discretion a deposit may be required to cover the full value of the books borrowed

42 (xxvi) Those permitted to use the Library under Rule 42 (xxv) may keep books on loan up to a limit of six volumes, no book being retained for a longer period than two months. The cost of packing and carriage by registered post both ways being defrayed by the borrower. No 'new book' will be issued

### Thomsonian Society.

43 (i) The aim is to cultivate the faculty of exact expression in speech and to provide for rational discussion of scientific technical engineering literary and social subjects

Also to arrange lectures on subjects of general interest by *members of the College Staff or outsiders*

43 (ii) There shall be no admission fee or subscription of any kind

All members of the Staff and students of the Civil Engineer class shall be members *ipso facto*

43 (iii) The Principal will nominate every session a member of the Staff to be the President who in consultation with the Principal shall have full control over the activities of the Society

43 (iv) The students will elect a Secretary at a general meeting to be held after the mid sessional examination every year. He will keep a record of the activities of the Society and issue notices, with the approval of the President, for the various meetings

43 (v) A Vice President will be elected from among the 2nd year students, at a general meeting to be held after the mid sessional examination every year. He will assist the President and in his absence preside at meetings

43 (vi) The Secretary will arrange meetings with the approval of the President. At least fourteen days notice should be given of each meeting.

43 (vii) The debates shall be held in the premises of the Civil Engineer Class Students Club

### Rules for the management of the College Magazine.

44 (i) The magazine will be called "The Lion, Thomason College Magazine" It will be under the control of a senior member of the Staff who will be called the "Director", and who will be appointed by the Principal every session

44 (ii) The Director will supervise its publication and control its finances

44 (iii) An Editor and an Assistant Editor will be appointed annually before the College vacation by the Director in consultation with the Principal The Editor may be either of the 2nd or 3rd year Civil Engineer Class, and the Assistant Editor will be an Overseer Class student of the 1st or 2nd year

44 (iv) The new Editor and Assistant Editor will take up their duties with the second issue of the session following their appointment The names of the new Editor and Assistant Editor will be announced in the first issue of the session following their appointment

44 (v) There will be as many issues during the session as possible (up to a maximum of 5), depending on articles submitted and if funds permit

44 (vi) A compulsory subscription of about four pence per annum for each of the 9 months of each session from each Civil Engineer class student and each Overseer class student

The above subscription will entitle each person named to one copy of each issue of the magazine Should any wish to purchase extra copies they may do so, if there are sufficient copies, at Re 1 2 per copy

44 (vii) The magazine will be kept on record in bound volumes in the College Library and in the Students Clubs

44 (viii) From time to time copies of the magazine may be sent to distinguished old alumni of the College and to certain institutions for purposes of exchange. A list of these will be sent to the College Office at the beginning of each session. The College Office will distribute the magazine to the subscribers

44 (ix) Writers of articles will be entitled to receive one extra copy free of charge. More copies will be supplied to them on payment of actual cost

---

### College dairy

45 All students are to obtain milk and butter from the College Dairy and from no other source. This Dairy is maintained for the good of their health and students are earnestly requested to see that their servants do not supply milk or butter from outside sources and by this means endanger the health and even risk the lives of students. Any servant detected supplying milk or butter to students from outside sources will be expelled from the College Estate, and students will be held responsible that their servants are informed of this fact. Butter and milk will be paid for through the Dairy bill.

---

### Subscriptions to athletics and games.

46 Students of the Civil Engineer and Overseer classes have to pay the following donations and subscriptions —

(a) Civil Engineer Class

CIVIL ENGINEER CLASS CLUB

1941-42

47 (ii) At the beginning of each session the Principal will nominate either himself or a member of the Senior Staff as President of the Club and another member of the Staff as Vice-President.

All affairs of the Club will be managed by an Executive Committee, the Chairman of which will be nominated by the Principal from among the 3rd year students, and eight honorary secretaries elected at a general meeting of the Club in the manner indicated below —

(a) General Secretary	} Elected from 2nd* year class members	} Elected at the close of the previous College season
(b) Nwa Secretary		
(c) Furniture Secretary		
(d) Garden Secretary		
(e) Billiards and Light ing Secretary	} Elected from 2nd or 3rd* year class mem bers	}
(f) Music Secretary		
(g) Indoor Games Sec retary	Elected from 1st year class members	} Elected as soon as po ssible after commence ment of the College season
(h) Refreshment Sec retary	Elected from any of the three classes	

A general meeting shall be called before the close of a College session to elect secretaries (a), (b), (c), (d), (e) and (f) for the ensuing College session. The new secretaries will take over charge of their respective duties from the retiring secretaries together with the account books and all connected papers before the College vacation commences and report their having done so to the Vice-President.

Before the College vacation commences the retiring secretaries (g) and (h) shall hand over charge to the general secretary for the ensuing College session appointed at a General Meeting together with all account books and all connected papers and report their having done so to the Vice-President.

\* Denotes those members who will become 2nd and 3rd year members during the immediately ensuing College session.

A general meeting shall be called as soon as possible after the commencement of a College session to elect secretaries (g) and (h) and to these newly elected secretaries (g) and (h) the General Secretary will hand over all the account books and connected papers which have been in his custody during the College vacation without delay and report his having done so to the Vice President .

47 (iii) The Club reserves the right to enforce an office on a member of the 2nd year class at an election for this purpose whenever an emergency arises for so doing

47 (iv) During the temporary absence of any secretary from Roorkee he will arrange for his work to be carried out by some other member proposed by him and approved by the President

47 (v) At the general meeting held before the close of a College session at which certain new secretaries for the ensuing session are elected a Finance Committee shall be formed for preparing the annual budget. The Committee will include —

- (a) A chairman (elected from 3rd year class)
- (b) Four members other than secretaries and elected from each class
- (c) The General Secretary, who will also act as Secretary of the Finance Committee

The Finance Committee will call upon the various new secretaries to submit their estimates of expenditure. After examining these the Committee will frame the budget and will submit it to the Executive Committee for approval. After approval has been given by the Committee the budget will be passed at the Annual General Meeting of the Club

47 (vi) Should circumstances warrant it, the Executive Committee may make subsequent minor changes in the budget to guard against over expenditure

a function and not pay, but in cases where more than one member dissents, the case must be referred to the Principal whose decision shall be binding on the dissenting members

47 (xii). The cash from the regular subscriptions and billiards earnings shall be kept in the College Treasury. The amount accumulated from billiards will be earmarked for repairs and upkeep of the table and not used for any other purpose without the express sanction of the Principal. No money other than revenue is required for billiard table repairs, arrangements must be made in the following budgets to repay such money from revenue

The General Secretary will maintain an up-to date record of the total receipts and expenditure of the Club during his year of office

Expenditure from capital must in all cases be regarded as loan, and budget provision made for repayment from revenue. This repayment need not necessarily be made in the year. All expenditure from capital must have the sanction of the Principal

At the beginning of each month the secretaries of the various sections will hand their accounts, together with vouchers and bills, to the General Secretary, who will submit bills to the President after ascertaining that they are within the budget allotment. The President may either sign the pay order or delegate the power to the Vice President, and the General Secretary will the funds required from the treasury and the section secretaries concerned. V-P charges shall be paid in a similar manner, but must be paid as to

47 (xiii) The imprest of Rs 1000/- will be

allowed an imprest of Rs 1000/- to the Club. Such im-

the President is not presiding shall be reported by the officer presiding to the President for necessary action

The minutes of all general meetings (both annual and ordinary) shall be recorded by the General Secretary as soon as possible after the meetings and the same sent to the President for perusal

47 (viii) The quorum for either an annual, general or ordinary meeting shall consist of one third the number of active members of the Club, excepting when constitutional changes are to be discussed, when a quorum of at least two thirds of the number will be required.

47 (ix) The following subscriptions shall be paid in advance by each member of the Club and will be deposited in the College Treasury —

(a) A compulsory subscription of Rs 3 per mensem for each of the 9 months of each session from each Civil Engineer class student

(b) A compulsory entrance fee of Rs 10 from each Civil Engineer class student

(c) Honorary members, if resident in Roorkee, shall be required to pay a subscription of Rs 2 per mensem

47 (x) The Club premises shall only be used for entertainments or meetings of a general nature and only with the Principal's sanction

47 (xi) The Executive Committee may, provided a resolution has been passed at a general meeting, collect extra subscriptions to meet any proposed expenditure which must be for a general purpose not provided for in the ordinary yearly accounts. This may be collected through the College office and all members will have to pay the subscription. In special cases the President can allow a single member not to take part

in a function and not pay, but in cases where more than one member dissents, the case must be referred to the Principal whose decision shall be binding on the dissenting members

47 (xii). The cash from the regular subscriptions and billiards earnings shall be kept in the College Treasury. The amount accumulated from billiards will be earmarked for repairs and upkeep of the table and not used for any other purpose without the express sanction of the Principal. If money other than revenue is required for billiard table repairs, arrangements must be made in the following budgets to repay such money from revenue

The General Secretary will maintain an up-to date record of the total receipts and expenditure of the Club during his year of office

Expenditure from capital must in all cases be regarded as a loan, and budget provision made for repayment from revenue. This repayment need not necessarily be made in one year. All expenditure from capital must have the sanction of the Principal

At the beginning of each month the secretaries of the various sections will hand their accounts, together with vouchers and bills, to the General Secretary, who will submit bills to the President after ascertaining that they are within the budget allotment. The President may either sign the pay order or delegate the power to the Vice President, and the General Secretary will draw the funds required from the treasury and distribute to the section secretaries concerned. V-P charges will be dealt with in a similar manner, but must be paid as they arise

47 (xiii) The General Secretary shall be allowed an imprest of Rs 10 for petty expenses of the Club. Such imprest will be recouped as often as is necessary

47 (xiv) The General Secretary, with the assistance of the section secretaries, will prepare a detailed account of all expenditure and receipts each month. These accounts will be audited by the Finance Committee each quarter. The audit report will then be considered by the Executive Committee, and the audited accounts for the whole year placed before the Annual General Meeting of the Club.

The various secretaries shall also submit a detailed report of their work at this General Meeting.

47 (xv) The Club premises will usually be open from 10 a.m. to 9 p.m. in the first half session and from 10 a.m. to 10 p.m. in the second half session, but on Sundays and holidays the Club shall open from 8 a.m. and 7 a.m. respectively. On special occasions the Club premises may be kept open after the aforesaid hours provided the Executive Committee has previously obtained the sanction of the Principal through the President, unless he is the Principal, otherwise through the Vice-President. The Club premises will be closed during the College vacation and no member or honorary member shall have the right to use them during that period.

47 (xvi) Members are expected to use the Club property with great care and not to remove from the Club premises anything which is not their private property.

Any damage to Club property must be reported promptly to the Vice-President by the General Secretary. The member concerned shall pay for the damage such amount as is assessed by the Personal Assistant to the Principal upon intimation from the President or Vice-President after the approval of the Principal has been obtained.

An up-to-date inventory of all the Club property shall be kept with the General Secretary, and the departmental secre-

ties shall also keep a list of the property in their charge. Copies of these lists will be put up on the notice board for a week in the beginning of the session. The proposals for new purchases together with an estimate of the cost of same are to be submitted to the President through the Vice President for countersignature before any purchase is made. A list of all such proposed new purchases is to be exhibited on the notice board from time to time.

The secretaries should realize that they are servants of the Club and are not entitled to privileges other than those enjoyed by all the members of the Club. In no circumstances must they use any Club property for their own private use. Neither must Club servants be called upon to perform duties other than those connected with the Club. Any such instances brought to the notice of the President will be dealt with by him in consultation with the Executive Committee. In every case the action taken shall be reported to the Officer in charge, Civil Engineer class.

47 (xvii) A member may bring with him to the Club premises occasionally one or two gentlemen as his guests. He will be responsible for his guests while they are in the Club premises.

No guests will be allowed to be present at the General or Business meetings of the Club.

On the occasion of any Club function invitations shall be issued only by the General Secretary after the list of invitations has been approved by the President. Members desiring to invite any friends will send the names and addresses of these friends beforehand to the General Secretary who will submit all names to the President for approval.

47 (xviii) The Club establishment will be regulated and controlled by the General Secretary under the orders of the Executive Committee.

47 (xiv) The General Secretary, with the assistance of the section secretaries, will prepare a detailed account of all expenditure and receipts each month. These accounts will be audited by the Finance Committee each quarter. The audit report will then be considered by the Executive Committee, and the audited accounts for the whole year placed before the Annual General Meeting of the Club.

The various secretaries shall also submit a detailed report of their work at this General Meeting.

47 (xv) The Club premises will usually be open from 10 a.m. to 9 p.m. in the first half session and from 10 a.m. to 10 p.m. in the second half session, but on Sundays and holidays the Club shall open from 8 a.m. and 7 a.m. respectively. On special occasions the Club premises may be kept open after the aforesaid hours provided the Executive Committee has previously obtained the sanction of the Principal through the President, unless he is the Principal, otherwise through the Vice President. The Club premises will be closed during the College vacation and no member or honorary member shall have the right to use them during that period.

47 (xvi) Members are expected to use the Club property with great care and not to remove from the Club premises anything which is not their private property.

Any damage to Club property must be reported promptly to the Vice President by the General Secretary. The member concerned shall pay for the damage such amount as is assessed by the Personal Assistant to the Principal upon intimation from the President or Vice President after the approval of the Principal has been obtained.

An up-to-date inventory of all the Club property shall be kept with the General Secretary, and the departmental secre-

secretaries shall also keep a list of the property. Copies of these lists will be put up on the first week in the beginning of the session. The purchases together with an estimate of the cost to be submitted to the President through the board for countersignature before any purchase is made. Such proposed new purchases as to be exhibited on the board from time to time.

The secretaries should realize that they are the Club and are not entitled to privileges or enjoyments by all the members of the Club. In no case must they use any Club property for their own use. Neither must Club servants be called upon to do other than those connected with the Club. Any complaint brought to the notice of the President will be handled by him in consultation with the Executive Committee. In case the action taken shall be reported to the Civil Engineer class.

47 (xvii) A member may bring with him to the premises occasionally one or two gentlemen. He will be responsible for his guests while on the Club premises.

No guests will be allowed to be present at the social or business meetings of the Club.

On the occasion of any Club function, invitations shall be issued only by the General Secretary, if such has been approved by the President. Any member desiring to invite any friends will send the names of these friends beforehand to the General Secretary. The General Secretary will submit all names to the President for approval.

47 (xviii) The Club establishment will be controlled by the General Secretary under the supervision of the Executive Committee.

47 (xiv). The General Secretary, with the assistance of the section secretaries, will prepare a detailed account of all expenditure and receipts each month. These accounts will be audited by the Finance Committee each quarter. The audit report will then be considered by the Executive Committee, and the audited accounts for the whole year placed before the Annual General Meeting of the Club.

The various secretaries shall also submit a detailed report of their work at this General Meeting.

47 (xv). The Club premises will usually be open from 10 a.m. to 9 p.m. in the first half session and from 10 a.m. to 10 p.m. in the second half session, but on Sundays and holidays the Club shall open from 8 a.m. and 7 a.m. respectively. On special occasions the Club premises may be kept open after the aforesaid hours provided the Executive Committee has previously obtained the sanction of the Principal through the President, unless he is the Principal, otherwise through the Vice-President. The Club premises will be closed during the College vacation and no member or honorary member shall have the right to use them during that period.

47 (xvi). Members are expected to use the Club property with great care and not to remove from the Club premises anything which is not their private property.

Any damage to Club property must be reported promptly to the Vice-President by the General Secretary. The member concerned shall pay for the damage such amount as is assessed by the Personal Assistant to the Principal upon intimation from the President or Vice-President after the approval of the Principal has been obtained.

An up-to-date inventory of all the Club property shall be kept with the General Secretary, and the departmental secre-

47 (xii) Several indoor games can be played at present in the Club. Gambling is definitely prohibited in the Club premises.

47 (xiii) Badminton and tennis are the only outdoor games provided by the Club at present and for these no extra charge is made.

47 (xiv) Members will vote for the newspapers and periodicals which they desire for the Club on a list circulated by the News Secretary at the close of the College session. The proposed list shall then be submitted to the Executive Committee and forwarded by the Chairman of the Executive Committee to the President for approval. The order for foreign periodicals will be placed before the annual vacation begins.

At the beginning of the College session all papers selected by the Executive Committee will be auctioned to the member of the Club and the proceeds credited to the Club funds. The purchaser of any paper or periodical will receive the old copy of the same as soon as the new one arrives.

47 (xv) The constitution can be modified only once a year and only then provided 75 per cent of the quorum laid down in rule 47 (vi) vote in favour of the proposed changes. Before any such change can be discussed it shall be necessary for the General Secretary to give one month's notice to all members. For this it is also necessary to obtain the sanction of the Principal.

All correspondence including newspapers and periodicals meant for the Club shall be delivered to the General Secretary, who will dispose of them in the manner required by the rules.

47 (xvi) All members when attending the Club are requested to refrain from appearing in negligé dress and are to be neatly and properly attired.

The Club premises will be properly looked after and kept clean and tidy under the supervision of the Garden and the General Secretaries. Anything in the nature of repairs being required will be reported to the Personal Assistant to the Principal.

The Personal Assistant to the Principal will report to the President any defect in cleanliness for necessary action.

47 (xix) Instances of neglect or indiscipline on the part of any servant of the Club shall be brought at once to the notice of the General Secretary, who may recommend him to the President for such disciplinary measures as may be necessary.

47 (xx) During the absence of members on duty in camp one or more of the Club servants as may be decided by the Executive Committee may accompany them to be in charge of the refreshments and indoor games at the camp. If considered necessary by the Executive Committee temporary establishment may be engaged for the period of the camp, provided the budget allotment will cover the extra charge.

47 (xxi) The billiard table can be used by members on the payment of the following charges: Annas 2 per member for singles and anna 1 pie 6 per member for doubles per game lasting 25 minutes or part thereof, to be charged against those taking part in a game. These charges will be realized through the College office each month.

Any damage to the billiard table cloth shall be paid for at the minimum rate of Rs. 5 per inch. For the first cut the charge will be more, the amount of which will be fixed by the President.

Members are expected to abide by any other instructions regarding billiards issued by the Billiards Secretary, and approved by the President.

CIVIL ENGINEER CLASS MESS

1911-1

CIVIL ENGINEER CLASS NESS

1911

CIVIL ENGINEER CLASS MEET

The senior student of the two members elected from the 2nd year shall be the Honorary Secretary and the junior student the Assistant Secretary. The Mess Secretary is to occupy the Secretary's quarters attached to the mess building. It is compulsory for the students elected to serve.

The Mess Committee shall meet as often as the President may call.

48 (iii) Between the date the College reopens after the long vacation and October 31, of each year the President will call an annual general meeting of all members of the mess to elect the committee for the session and to consider any suggestions for improvements or alterations for the general welfare of the mess. Any such suggestions in writing, must be lodged with the Honorary Secretary at least 3 clear days before the date of the annual general meeting.

Annual  
General and  
other  
meetings

No other general meeting is to be called except with the previous sanction of the President.

The Principal has the right to accept or vote all proposals, etc. passed at the annual general or any other general meeting or committee meeting.

All communications concerning the mess which are addressed to the Principal are to be sent to him through the President.

48 (iv) The rates of subscriptions shall be as follows —

Subscrip-  
tions

(i) An entrance fee of Rs 2 per student upon first joining.

(ii) A monthly subscription of Re 1.8 per student per session.

(iii) The members of the mess will be required to pay Rs 20 as advance money to effect cash pur-

The senior student of the two members elected from the 2nd year shall be the Honorary Secretary and the junior student the Assistant Secretary. The Mess Secretary is to occupy the Secretary's quarters attached to the mess building. It is compulsory for the students elected to serve.

The Mess Committee shall meet as often as the President may call.

48 (iii) Between the date the College reopens after the long vacation and October 31, of each year the President will call an annual general meeting of all members of the mess to elect the committee for the session and to consider any suggestions for improvements or alterations for the general welfare of the mess. Any such suggestions, in writing, must be lodged with the Honorary Secretary at least 3 clear days before the date of the Annual general meeting.

Annual  
General and  
other  
meetings

No other general meeting is to be called except with the previous sanction of the President.

The Principal has the right to accept or vote all proposals, etc. passed at the annual general or any other general meeting or committee meeting.

All communications concerning the mess, which are addressed to the Principal, are to be sent to him through the President.

48 (iv) The rates of subscriptions shall be as follows —

Subscrip-  
tions

(i) An entrance fee of Rs 2 per student upon first joining.

(ii) A monthly subscription of Re 1-8 per student per session.

(iii) The members of the mess will be required to pay Rs 20 as an advance money to effect cash pur-

charges of food stuff for the mess. The advance will be adjusted at the end of the Collego Course or at any other time, if a member resigns.

The monthly messing charges will be worked out every month based on the actual expenditure incurred, and will thus vary every month. The approximate monthly amount will, however, be Rs 30 for the vegetarians and Rs 40 for the non vegetarians.

NOTE—All entrance fees, monthly subscriptions and messing charges will be collected as " Collego Dues ".

48 (v) All members of the mess will be liable for their monthly subscription whether absent from the mess or not.

Members of the mess will be allowed a rebato from their monthly messing charges for —

(i) Whole days away on tour,

(ii) One whole day or more when away on sanctioned leave, i o leave sanctioned as per College Standing Orders.

But for those days for which this rebato is allowed a charge of annas four per day will be made for table money.

The rebato to be allowed will be as follows —

	Rs	s	p
(i) Vegetarians ..	1	0	0 per day
(ii) Non vegetarians	1	5	0 .. .

A book will be maintained in the mess and all members who wish to avail themselves of the concession of rebato on messing charges for any absence as noted above must sign this book 24 hours before they leave the College. Should they fail to do so for any reasons, whatsoever, full messing charges will

have to be paid. There will be no excuses accepted for an infringement of this rule. In the case of a whole class being away on tour or the whole three classes then the senior student in either case who is a member of the mess will be responsible for signing the book for all.

*N B* —Afternoon tea, as a compulsory item, will be dropped. Arrangements will, however, be made for those who wish to stick to this item, for which extra charges will be levied on them.

No rebate for a single meal will be allowed unless a member drops down a particular meal for more than 7 consecutive days from the date he informs the Honorary Secretary of his intention to do so. The rebate then will be worked as follows —

		Vegetarians		Non vegetarians	
		Rs a p		Rs a p	
Dinner	..	0	5 6	0	7 6
Breakfast	..	0	2 9	0	3 9
Lunch	..	0	1 9	0	5 9

It will, however, not affect the payment of table money.

No member will be allowed to change from vegetarian or non vegetarian menu or *vice versa* during the middle of a month. He can do so in the beginning of a month by informing the Mess Secretary.

For meals on days of departure and return members will pay in addition to the table money charges, for each meal of which they partake at the following rates —

				Rs	a	p
(1) Vegetarians—						
(a) Breakfast	..	..	..	..	0	4 0
(b) Lunch	..	..	..	..	0	5 0
(c) Dinner	..	..	..	..	0	7 0

charges of food stuff for the mess The advance will be adjusted at the end of the College Course or at any other time, if a member resigns

The monthly messing charges will be worked out every month based on the actual expenditure incurred, and will thus vary every month The approximate monthly amount will however be Rs 30 for the vegetarians and Rs 40 for the non vegetarians

NOTE—All entrance fees, monthly subscriptions and messing charges will be collected as “ College Dues ”

48 (v) All members of the mess will be liable for their monthly subscription whether absent from the mess or not

Members of the mess will be allowed a rebate from their monthly messing charges for —

(i) Whole days away on tour,

(ii) One whole day or more when away on sanctioned leave, i.e. leave sanctioned as per College Standing Orders

But for those days for which this rebate is allowed a charge of annas four per day will be made for table money

The rebate to be allowed will be as follows —

	Rs	s	p
(i) Vegetarians ..	1	0	0 per day
(ii) Non vegetarians	1	5	0 ..

A book will be maintained in the mess and all members who wish to avail themselves of the concession of rebate on messing charges for any absence as noted above must sign this book 24 hours before they leave the College Should they fail to do so for any reasons, whatsoever, full messing charges will

have to be paid. There will be no excuses accepted for an infringement of this rule. In the case of a whole class being away on tour or the whole three classes then the senior student in either case who is a member of the mess will be responsible for signing the book for all.

N B —Afternoon tea as a compulsory item, will be dropped. Arrangements will, however, be made for those who wish to stick to this item, for which extra charges will be levied on them.

No rebate for a single meal will be allowed unless a member drops down a particular meal for more than 7 consecutive days from the date he informs the Honorary Secretary of his intention to do so. The rebate then will be worked as follows —

	Vegetarians			Non vegetarians		
	Rs	s	p	Rs	s	p
Dinner	.	0	5	6	0	7

## (u) Non vegetarians—

(a) Breakfast ..	.	.	..	0	3	0
(b) Lunch ..	..	..	..	0	7	0
(c) Dinner ..	..	..	..	0	9	0

Should a member be ill and confined to his quarters by the College Medical Officer, he may partake of his meals in his quarters but his own servants will bring the food from the mess. On no account will mess appointments, etc be allowed to be taken to a member's room in cases other than for illness.

Members are expected to be punctual at all meals. No responsibility can be assumed for the provision of meals out of regular hours except as provided for in clause 18.

48 (vi) No member may invite any guests to any meal without first entering in the guest book (which will be maintained in the mess for the purpose), notice of his intention at least 2 hours before the time the meal starts. Cancellation under 2 hours' notice will be accepted.

The rates for single meals for guests will be as under:—

Rs a p.

## (i) Vegetarians—

(a) Breakfast ..	..	..	..	0	5	0
(b) Lunch ..	..	..	..	0	7	0
(c) Tea ..	..	..	..	0	4	6
(d) Dinner ..	..	..	..	0	8	0

## (u) Non vegetarians—

(b) Lunch ..	..	..	..	0	8	0
(c) Tea ..	..	..	..	0	4	6
(d) Dinner ..	..	..	..	0	11	0

The rates for the whole day messing for guests will be as under

	Rs	a	p
(i) Vegetarians	..	1	2 0
(ii) Non vegetarians		1	7 0

48 (vii) No invitations in the name of the mess shall be given to any individual or party without the consent of the President and if consent be given, all members will bear a proportion of the cost, whether absent or not

General  
invitations.

48 (viii) All property, furniture, appointments, etc in the mess is as far as the mess is concerned the property of the Thomason College of Civil Engineering and no individual member has any share in it whatsoever

Mess  
property.

All damage done by members whether accidentally or not will be paid for by the members causing such damage and such members will sign a chit for any such damage, voluntarily

The right to lend any of the mess property, servants, etc for any College functions, teas, etc is vested solely in the President. The mess property and appointments are now in any case to be lent to any private individual or individuals whether belonging to the College or not

48 (ix) It is the duty of the Secretary in conjunction with the President to prepare the menu for the ensuing week and to see that the food supplied cooked or uncooked is of the best quality. The Secretary will bring complaints to the notice of the President. The mess servants are under the direct control of the President.

Secretary's  
duties

48 (x) The Mess Secretary will arrange messing in camp for those members of the mess who have to go to the 2nd year survey camp or to 3rd year minor or major project camps

Camp  
messing

48 (xxiv) No concert parties or other kinds of entertainments will be allowed in the mess building. These entertainments when sanctioned are to be held in the C E Students' Club.

### Rules of the Overseer Class Club.

49 (i) All students of the Overseer Class have to be members of the Club, and they shall abide by the rules and regulations in force. A breach of the rules or conduct not becoming a member of the Club will debar him from the enjoyment of the Club privileges to the extent approved by the President on the recommendation of the Club Secretary.

49 (ii) The Principal will be the patron of the Club and the Head Master will be the President of the Club.

The Vice President will be the senior student of the 2nd year, who will also be one of the six members of the Executive Committee.

The President will be assisted in the management of the Club by a committee composed of five members. Five of these will be elected at a general meeting of the Club in the following manner:—

- |                           |   |
|---------------------------|---|
| (a) Club Secretary,       | } Will be in charge of various outdoor games connected with the Club. |
| (b) Tennis Secretary,     |   |
| (c) Hockey Secretary,     |   |
| (d) Football Secretary,   |   |
| (e) Volleyball Secretary, |   |

Disciplinary and financial control will be exercised by the Head Master, Overseer Class.

49 (iii) (a) Each student of the Overseer class will pay compulsorily, Rs 5 per messem for each of the 9 months of

each session for Club Recreation and Boating of which Rs 5 will be credited to the Club and Recreation Fund and Rs 2 to the Boating Fund

(b) Each will pay compulsorily an entrance fee of Rs 3 upon first joining the College, the whole of which will be credited to the Club and Recreation Fund

### Annual Regatta Rules

50 (i) *President*—The Principal will appoint a member of the College Staff as President of the Regatta Committee

The President will choose his own Committee

50 (ii) *Date*—The Annual Regatta will be held early in June on a date fixed by the Principal on the recommendation of the President

The Annual Regatta is open to such students of both Civil Engineer and Overseer classes as have passed both the swimming and rowing tests

Heats for the various events of the Regatta will take place on dates to be notified by the President

50 (iii) *Entries and Entrance fee*—All entries will close at noon on a date to be notified by the President

The entrance fees will be 8 annas for entrants per challenge event excluding the coxswains

50 (iv) *Events*—The Regatta events will be as follows —

- (1) Challenge Single Sculls
- (2) Challenge Double Sculls
- (3) Challenge Pair Oars
- (4) Challenge Fours
- (5) (a) Swimming Race } For Indian garrison
- (b) Pontoon Race    }
- (6) Greasy Pole (Open to public)

50 (v) *Course*—All events will be rowed on the Ganges Canal downstream. The finishing point will be about 300 yards above the Ganeshpur bridge. The length of the course will be as follows.—

For events 1, 2 and 3— $\frac{1}{2}$  mile.

For event 4— $\frac{3}{4}$  mile

50 (vi) *Substitutes*—One substitute will be allowed to row in a four to replace a man who is unfit provided that the substitute is eligible and his name has not been entered in any other crew in that event. The name of the substitute need not be submitted.

No substitute will be allowed in half mile races.

50 (vii) *Events 1, 2, 3 and 4* are open to students of both the Civil Engineer and Overseer classes, but the crews and cox are to be either all Civil Engineer class students or all Overseer class students. A Civil Engineer class crew and cox may consist of a crew and cox drawn from all 3 years and similarly an Overseer class crew and cox may consist of a crew drawn from both years. There is no special race in which crews from any particular year compete against another such crew.

50 (viii) *Punctuality*—Heats will be started punctually at the time fixed. Competitors should arrive at the starting point 10 minutes before the time in order to adjust stretchers and straps, etc. Any crew not found ready at the time fixed for the start is liable to be disqualified.

50 (ix) *Disqualification*—(a) Any crew causing delay at the start by inability to turn and manoeuvre their boat as ordered by the starter will be disqualified.

(b) Any crew fouling another crew during the race by touching with their oars or boat the oars or boat of the other crew when in the latter crew's water will be disqualified.

No crew is permitted to take its opponent's water unless it is leading by two lengths and on the approach of the other it must give way and retire to its own water.

50 (A) *General*—A boat is never to be brought into the bank or taken out from the bank unless the boat is pointing upstream. Thus a boat must always be turned round after a race before approaching the bank.

50 (xi) *Prize distribution*—The prize distribution will take place soon after the last race is rowed. Prizes will be awarded for events 1, 2, 3 and 4 and also for boating (best oar in Civil Engineer Class 3rd year or Overseer Class 2nd year). The prizes for the events 5 and 6 will not be awarded but will be sent over to Adjutant K G O Bengal Sappers and Miners to be given to the winners by the Commandant.

### Boating and Swimming Rules

51 (i) These events will be in charge of a member of the staff who will be appointed by the Principal each year and who will be known as Officer in charge Boating.

51 (ii) The duties of Officer in charge Boating will be as follows —

- (a) To arrange for the swimming tests in consultation with the President Recreation on or about November 15, April 1 and July 1 each session and to maintain a record of the results of these tests.
- (b) To arrange and supervise the coaching in rowing of such students as have passed the swimming test and also to arrange for the rowing test.
- (c) To arrange to store up all boats by June 30, and report to President Recreation his having done so.

To inspect the boats from time to time and report the result of these inspections

- (d) To report to President Recreation by January 31 each year the condition of each boat and submit an estimate for the cost of repair, varnishing etc and to see that repairs etc are completed by March 15 at the latest
- (e) To submit to President Recreation by May 31 his proposals if any, for the replacement of old boats by new
- (f) To maintain a log book of boats giving the following inventories —
  - (i) number and description of each boat and its equipment,
  - (ii) year of its purchase or building and the purchase price (together with freight etc) or cost of build
  - (iii) cost of repairs (including varnishing) executed during the College session, together with dates of execution

51 (iii) *Swimming*—All students of the Civil Engineer and Overseer classes are required to pass the swimming test before they can be permitted to take up rowing

Students who wish to learn to swim must begin their lessons in Amber Talab (or in the College Swimming Tank when it is completed) and not in the main canal. Such students will take their lessons only at times arranged by Officer-in-charge of Boating who will see that the Boatman is present at these lessons

Students will not be allowed to enter the boats or bathe in the main canal till they have qualified in swimming

The swimming tests will be held each year on or about November 15 April 1 and July 1 The test shall consist of swimming half way across the canal and back and will take place downstream of Solani Aqueduct

Maximum marks allotted for the test are —

For Civil Engineer Class students—30

For Over sea Class students—20

51 (iv) *Rowing*—The rowing test will be held in the last week of April

To pass the test a student must be able to handle the oars properly should be able to backwater with either or both hands and should be able to turn the boat in any direction

No marks will be allotted for this test

Only such students as have passed this test will be allowed to enter the Regatta

51 (v) *Boating*—Boating season will be from the beginning of April to first week in June during which the finale of Annual Regatta will be held

Boating is only allowed in the reach of the canal between the brick lions below the Roorkee city bridge and the Ganeshpur bridge

No students will be permitted to take out boats before April 1

To encourage rowing the boating season may be extended till the end of June

Students will not be permitted to take out boats after June 30

**Special Rules.**

52 (i) All European students are expected to attend Divine Service once every Sunday at their own place of worship.

52 (ii). Indian students of Overseer and Draftsman classes, as well as those of the Civil Engineer Class, who do not join the common mess will make their own arrangements for messing.

53. Students, whether European or Indian, of the Overseer and Draftsman classes will make their own arrangements for messing.

54. Students, whether European or Indian, of the Civil Engineer Class will make their own arrangements for messing unless they join the Common Civil Engineering Class Mess.

Engineer Irrigation Branch United Provinces as well  
as representative of the Institution of Civil Engineers,  
London

(c) Mr J C Powell Price MA, OIE IFS Director  
of Public Instruction United Provinces

(d) Dr N N Godbole MA, BSc PhD (Berlin),  
Professor of Industrial Chemistry and Dean of the

1942

## PERCENTAGE OF MARKS OF STUDENTS

The following table shows the percentages of marks gained by the various classes for the last five years and the numbers that qualified.—

Year	Civil Engineer Class									Overseer Class					
	3rd Year			2nd Year			1st Year			2nd Year			1st Year		
	Highest marks	No qualified	Average marks	Highest marks	No qualified	Average marks	Highest marks	No qualified	Average marks	Highest marks	No qualified	Average marks	Highest marks	No qualified	Average marks
1937-38	78	21	66	79	25	65	80	31	63	78	36	60	70	42	59
1938-39	73	24	59	78	31	61	81	31	66	76	44	62	86	11	69
1939-40	75	26	65	83	32	63	79	30	65	82	41	61	85	47	.
1940-41	82	32	66	82	30	61	76	34	61	82	44	62	80	37	59
1941-42	80	28	66	78	33	62	79	35	62	79	34	60	78	48	58

## COLLEGE STAFF

The following changes, etc occurred in the College Staff during the session

(i) Mr P L Sharma, Lecturer in Drawing, remained on leave on average pay on medical certificate with effect from 8th December 1941, to 10th June, 1942 Mr S K Gupta officiated in the leave vacancy from 24th January, to 3rd June 1942

(ii) A temporary post of Lecturer in Civil Engineering was created and Mr Jai Krishna, Personal Assistant to Principal, was appointed to it from 16th December, 1941 This post was later on made permanent

(iii) Mr Kashi Saran Mista was appointed to officiate as Personal Assistant to Principal with effect from 19th January, 1942

(iv) Mr V G Garde, M Sc, Assistant Professor of Civil Engineering, on probation, was confirmed in his appointment with effect from 16th October, 1941

(v) Dr Z U. Ahmed, Lecturer in Electrical Engineering, on probation, was confirmed in his appointment with effect from 16th October, 1941

(vi) Mr Jagdamba Prasad, Assistant Professor of Mechanical and Electrical Engineering Benares Hindu University, Benares, was appointed as officiating Lecturer in Mechanical Engineering from 9th January 1942 vice Mr B L Sharma

(vii) Mr P C Sen Gupta, officiating Headmaster, Overseer Class, was confirmed in his appointment

## DEPARTMENTS

The departments into which the College is divided remain-

Faculty of Technology, Department of Industrial Chemistry, Benares Hindu University, nominated by the United Provinces Government as representative of the University Education

(e) Mr H G Trivedi, M I E , A M I C E , Superintending Engineer Public Health Engineering Department, United Provinces, represented the United Provinces Branch of Institution of Engineers India

(f) Major Raja Durga Narain Singh, M I A of Tirwa, district Farrukhabad and Major Nawab Mohammad Jamshed Ali Khan M B E M L A , Baghat Meerut, were nominated as representatives of the United Provinces Legislature in place of Thakur Phul Singh Sahib B A , L L B , M L A , and Pandit K D Malviya M S C M L A , whose terms of office expired on 26th January 1941 respectively

(g) Rai Bahadur Madan Gopal Sardana, Principal, Thomason College of Civil Engineering, Roorkee, *ex officio* Secretary

A meeting of the Council was held on 11th May, 1942

### REORGANIZATION COMMITTEE

Orders of Government were received on many of the resolutions passed by the Committee. Some of the resolutions are still under consideration of the Government

### BOARD OF STUDIES

The Board as in the past years met on various occasions during the session and assisted the Principal by offering their advice and opinion on several matters connected with the internal working of the College

## COLLEGE STAFF.

The following changes, etc occurred in the College Staff during the session

(i) Mr P L Sharma, Lecturer in Drawing, remained on leave on average pay on medical certificate with effect from 8th December 1941, to 10th June, 1942 Mr S K Gupta officiated in the leave vacancy from 24th January, to 3rd June, 1942

(ii) A temporary post of Lecturer in Civil Engineering was created and Mr Jai Krishna, Personal Assistant to Principal, was appointed to it from 16th December, 1941. This post was later on made permanent

(iii) Mr Kashi Saran Misra was appointed to officiate as Personal Assistant to Principal with effect from 19th January, 1942

(iv) Mr V G Garde, M Sc, Assistant Professor of Civil Engineering, on probation, was confirmed in his appointment with effect from 16th October, 1941

(v) Dr Z U Ahmed, Lecturer in Electrical Engineering, on probation, was confirmed in his appointment with effect from 16th October, 1941

(vi) Mr Jagdamba Prasad Assistant Professor of Mechanical and Electrical Engineering, Benares Hindu University, Benares, was appointed as officiating Lecturer in Mechanical Engineering from 9th January 1942, vice Mr B L Sharma

(vii) Mr P C Sen Gupta, officiating Headmaster, Overseer Class was confirmed in his appointment

## DEPARTMENTS

The departments into which the College is divided remained unaltered.

Faculty of Technology, Department of Industrial Chemistry, Benares Hindu University, nominated by the United Provinces Government as representative of the University Education

(e) Mr H G Trivedi, M I E , A M I C E , Superintending Engineer, Public Health Engineering Department, United Provinces, represented the United Provinces Branch of Institution of Engineers, India

(f) Major Raja Durga Narain Singh, M L A , of Tirwa, district Farrukhabad and Major Nawab Mohammad Jamshed Ali Khan, M B E M L A , Bighat Meerut, were nominated as representatives of the United Provinces Legislature in place of Thakur Phul Singh Sahab, B A , LL B , M L A , and Pandit K D Mahiya, M S O , M L A , whose terms of office expired on 26th January, 1911, respectively

(g) Rai Bahadur Madan Gopal Sardana, Principal, Thomason College of Civil Engineering, Roorkee, *ex officio* Secretary

A meeting of the Council was held on 11th May, 1912

### REORGANIZATION COMMITTEE

Orders of Government were received on many of the resolutions passed by the Committee. Some of the resolutions are still under consideration of the Government

### BOARD OF STUDIES

The Board as in the past years met on various occasions during the session and assisted the Principal by offering their advice and opinion on several matters connected with the internal working of the College

(b) The specifications could have been shortened, and should not have been repeated over and over again

(c) The detailed quantities of work were carefully worked out in detail, but, in many cases, were carelessly abstracted, and, one or two cases, not abstracted at all

(d) The analyses of rates were very well thought out, and only in one case were no analyses given.

(e) In many cases, the abstracts for the whole project was carelessly prepared, evidently due to want of time. This abstract is most important, and more time should have been allotted to it by the students

(f) In most cases the mileage of the road were not shown on the index plan nor on the survey plans. These plans are practically useless without the mileages on them. Except for these omissions the survey plans on the whole were very well executed as also were the longitudinal sections. Generally the formation level of the proposed road was so fixed on the longitudinal sections as to give an economical quantity of earthwork to be done

(g) The project included a major project over the Ram Ganga river. The designs were very well thought out and the calculations carefully prepared. The detailed drawings were very complete, and the plans, on the whole excellent. The waterway provided varied from 1,100 ft to 1,200 ft. All provided for piers and abutments founded on wells. In all but four cases circular wells were provided. The four exceptions provided twin octagonal wells. With regard to the superstructure, everyone provided

## CIVIL ENGINEERING

The appointment of a Lecturer in the Civil Engineering department relieved the Civil Engineering Staff to a certain extent but one more lecturer is still required in this department. The normal instruction has, however, been carried out.

One student of the Civil Engineer class 3rd year had to be expelled from the College for this session as a disciplinary measure.

**Projects**—The 3rd year students were given the usual Minor and Major projects.

The Minor project was for the Sewage disposal of the College area.

The major project was set by W. F. Walker, Esq., I.S.E., Superintending Engineer, Buildings and Roads Branch, Public Works Department, Lucknow. It was for a first class metalled road from Afzalgarh to Nagina railway station in the Bijnor District. It was examined by Mr. M. B. Hatfield, Executive Engineer, Kumaon Provincial Division, Naini Tal as Mr. Walker could not do so due to pressure of work. His report is as follows:

1. The students were in a series of five groups. There were two possible routes—one direct and the other via Dhampur—Sherkot. Four out of five groups selected the longer route via Dhampur and one selected the direct route.

2. On the whole the projects were very well thought-out but badly compiled. The various major sub-heads of work were mixed up one with the other, and not kept separated.

1. The following points call for remarks:

(a) Many of the students wrote much on irrelevant matter.

(b) The specifications could have been shortened, and should not have been repeated over and over again

(c) The detailed quantities of work were carefully worked out in detail, but, in many cases, were carelessly abstracted, and, one or two cases, not abstracted at all

(d) The analyses of rates were very well thought out, and only in one case were no analyses given

(e) In many cases, the abstracts for the whole project was carelessly prepared, evidently due to want of time. This abstract is most important and more time should have been allotted to it by the students

(f) In most cases the mileage of the road were not shown on the index plan nor on the survey plans. These plans are practically useless without the mile ages on them. Except for these omissions the survey plans on the whole were very well executed as also were the longitudinal sections. Generally the formation level of the proposed road was so fixed on the longitudinal sections as to give an economical quantity of earthwork to be done

(g) The project included a major project over the Ram Ganga river. The designs were very well thought out and the calculations carefully prepared. The detailed drawings were very complete and the plans on the whole excellent. The waterway provided varied from 1,100 ft to 1,200 ft. All provided for piers and abutments founded on wells. In all but four cases circular wells were provided. The four exceptions provided twin octagonal wells. With regard to the superstructure everyone provided

reinforced concrete T-beams. Six students provided T-beams continuous over two spans whereas the remainder provided T-beams freely supported in each span. Only a few students made provision for expansion and contraction of the T-beams at the freely supported ends over the abutments and piers.

(h) The students were asked to prepare an estimate for a combined Assistant Engineer's residence and a sub divisional office. In many cases the buildings were designed as separate buildings instead of one combined building. On the whole, the designs were good and had been carefully thought out in detail. In most cases reinforced brickwork roofs were provided but in a few reinforced concrete joists spanned by jack arches were employed to avoid the use of too much steel due to the war.

(i) In many cases the permissible limit for the cost of an Assistant Engineer's residence was not considered.

(j) With regard to the proposals for the road, most of the students provided the surface of tar, but one group provided a thin coat of cement concrete. Unless traffic of this road increases greatly due to the existence of a *pacca* road, the census figures do not warrant the heavy expenditure on concrete. Peculiarly enough most of the road estimates were not compiled correctly and concisely. The specifications were too long and the material for compiling the abstract of cost scattered over the whole project."

**Visits to Works**—As far as the funds permitted, visits to various engineering works were arranged for the Civil

Engineer class, 3rd Year students The works visited by them are as given below

*Civil Engineer class, 3rd year*—Dellu Waterworks, Cement Concrete Road and Hume Pipe and Brick Sewer construction, Sewage Disposal Works, Sewage Pumping Station Okhla Headworks, All India Radio and Government of India buildings Legislative Assembly and Secretariat buildings

These visits are of the greatest value to the students and it is requested that the allotment for this purpose may be enhanced

**Survey**—The Survey Camp of 2nd year Civil Engineer Class was held near Landhaura in February 1942 The broken and undulating ground in this area was very suitable for triangulation and subsequent mapping work During the course of three weeks students received very useful practical instruction

The College has the reputation of imparting a high class of training in survey This high standard of efficiency is still being maintained as is amply borne out by the I R S E Examination results in this subject where students have scored top marks in the subject

The Survey Department has given on loan a large number of survey instruments such as theodolites levels compasses and binoculars to the Central P W D and the Army Department for carrying out survey in connection with urgent war work Mr S R Singh Officer in charge Survey after testing and adjusting these instruments at a very short notice made them available for use The spirit with which he worked is highly appreciated

**Chemistry**—The work in this department remained as in the past and was carried out satisfactorily

reinforced concrete T-beams Six students provided T-beams continuous over two spans whereas the remainder provided T-beams freely supported in each span Only a few students made provision for expansion and contraction of the T-beams at the freely supported ends over the abutments and piers

(h) The students were asked to prepare an estimate for a combined Assistant Engineer's residence and a sub divisional office In many cases the buildings were designed as separate buildings instead of one combined building On the whole, the designs were good, and had been carefully thought out in detail In most cases reinforced brickwork roofs were provided but in a few reinforced concrete joists spanned by jack arches were employed to avoid the use of too much steel due to the war

(i) In many cases the permissible limit for the cost of an Assistant Engineer's residence was not considered

(j) With regard to the proposals for the road, most of the students provided the surface of tar, but one group provided a thin coat of cement concrete Unless traffic of this road increases greatly due to the existence of a *pacca* road, the census figures do not warrant the heavy expenditure on concrete Peculiarly enough most of the road estimates were not computed correctly and concisely. The specifications were too long and the material for compiling the abstract of cost scattered over the whole project "

**Visits to Works**—As far as the funds permitted, visits to various engineering works were arranged for the Civil

Two students of Overseer class, 2nd year were expelled from the College for this session as they were found copying from pre written slips in the examination hall

The 2nd year students prepared the following designs

- (1) A steel truss
- (2) A hostel for accommodating the technicians
- (3) A distributary fall
- (4) A siphon
- (5) R C Floor
- (6) A R C Foot Bridge
- (7) Plate girder bridge
- (8) A small masonry bridge

The project prepared by the 2nd year Overseer class this year was a proposal to extend irrigation facilities to the Khark area lying to the south of the East Indian Railway and bounded on the west by the Ganges Canal on the south by the Bijnaur drain and on the east by the Sohni River Khadir. It was set by Mr Naubat Rai 1st Executive Engineer Northern Division Ganges Canal Roorkee

Due to the stringency of funds it has not been possible to send out the Overseer Class 2nd year to visit works of interest. The students gain much useful knowledge from these visits and for the proper training of the overseers it is essential that the requisite funds be provided for the continuance of such instructional tours

#### DRAUGHTSMAN CLASS

The control of the class had to be transferred to the Head Master Overseer class temporarily due to Mr P L Sharma proceeding on medical leave

The session commenced with 18 students in all the three years but two more students joined the 1st year class later on

## PURE AND APPLIED MATHEMATICS AND PHYSICS

Regarding this department nothing is to be added to the report that was made last year

## DEPARTMENT OF MECHANICAL AND ELECTRICAL ENGINEERING

In Electrical Engineering department there was no special change and the work was carried out as usual. The Mechanical Engineering Department, however, was very heavily worked this year owing to the addition of the training of 300 War technicians in practically every trade that could be taken up by the workshops. In the beginning the whole work was carried on by Mr B L Sharma but later on in December, Mr Jagdamba Prasad joined as Lecturer in Mechanical Engineering and two specialist instructors from United Kingdom were also appointed. This relieved Mr Sharma to some extent.

The question of funds for the purchase of machinery for the Heat Engine Laboratory was placed before the Advisory Council, who agreed to the proposal and recommended that a Vertical Steam Engine with Surface Condenser and a auto-cycle oil engine be provided after the war.

The motor generating set has been ordered through the Department of Labour. The United Provinces Government has promised to allot funds for the same when required.

## OVERSEER CLASS

The situation as regards the staff is still the same as in the previous year, and instruction is being carried on with the help of the Civil Engineer class staff.

The new syllabus of the Overseer Class has been introduced from this session in the 1st year class.

Two students of Overseer class 2nd year were expelled from the College for this session as they were found copying from pre written slips in the examination hall

The 2nd year students prepared the following designs

- (1) A steel truss
- (2) A hostel for accommodating the technicians
- (3) A distributory fall
- (4) A siphon
- (5) R C Floor
- (6) A R C Foot Bridge
- (7) Plate girder bridge
- (8) A small masonry bridge

The project prepared by the 2nd year Overseer class this year was a proposal to extend irrigation facilities to the Mirka area lying to the south of the East Indian Railway and bounded on the west by the Ganges Canal on the south by the Bijhauri drain and on the east by the Solan River khadir. It was set by Mr Naubat Rai 1st Executive Engineer Northern Division Ganges Canal Roorkee

Due to the stringency of funds it has not been possible to send out the Overseer Class 2nd year to visit works of interest. The students gain much useful knowledge from these visits and for the proper training of the overseers it is essential that the requisite funds be provided for the continuance of such instructional tours

### DRAUGHTSMAN CLASS

The control of the class had to be transferred to the Head Master Overseer class temporarily due to Mr P L Sharma proceeding on medical leave

The session commenced with 18 students in all the three years but two more students joined the 1st year class later on

## PURE AND APPLIED MATHEMATICS AND PHYSICS

Regarding this department nothing is to be added to the report that was made last year

## DEPARTMENT OF MECHANICAL AND ELECTRICAL ENGINEERING

In Electrical Engineering department there was no special change and the work was carried out as usual. The Mechanical Engineering Department, however, was very heavily worked this year owing to the addition of the training of 300 War technicians in practically every trade that could be taken up by the workshops. In the beginning the whole work was carried on by Mr B L Sharma but later on in December, Mr Jagdamba Prasad joined as Lecturer in Mechanical Engineering and two specialist instructors from United Kingdom were also appointed. This relieved Mr Sharma to some extent.

The motor generating set has been ordered through the Department of Labour. The United Provinces Government has promised to allot funds for the same when required.

## OVERSEER CLASS

The situation as regards the staff is still the same as in the previous year, and instruction is being carried on with the help of the Civil Engineer class staff.

The new syllabus of the Overseer Class has been introduced from this session in the 1st year class.

additions it is hoped to put up a better performance next session.

The interest in Hockey was as keen as ever and once more we had an easy win over the Royal Engineers.

The game of Football was popular amongst students.

Squash remained, as before, the most popular game in the College. The College won the Olympic matches and also defeated the Royal Engineers in two friendly matches. Squash balls have become scarce and costly and next year it may become difficult to carry on the game properly.

Boating was very favourite with students and they took a keen interest in the College Regatta. Owing to the number of oars available for rowing having gone very low and our helplessness in replacing the old broken ones the Double Sculls had to be given up altogether this year. The remaining events, however, were very much contested.

## HEALTH

The health of the students has been excellent this year.

## DISCIPLINE

The discipline of the College on the whole has been good. A more rigid enforcement of the College Standing Orders has resulted in considerable improvement in the tone of discipline.

## CIVIL ENGINEER CLASS STUDENTS CLUB AND MESS

**Club**—As on previous occasion there was keen contest for the post of office bearers of the club. Some secretaries showed slackness in the discharge of their duties and the rules have been tightened to enable the slackers to be replaced. The indoor games showed great enthusiasm, the number of entrants being specially large this year.

This year the new syllabus was introduced in the 1st year class. In accordance with the new syllabus the students are given lectures on Drawing, Building Construction and Mensuration with a view to enable them to learn computing and estimating properly. The medium of teaching was vernacular. Due to the dearth of text books in vernacular, however, the progress of the class was rather slow.

### SPORTS AND REGATTA

The annual sports were held on Wednesday, 19th December 1941, and the annual regatta on 1st June 1942. On both the occasions the staff and students were 'At Home' to old students and residents of the station.

The annual athletic sports were run practically on the same lines as last year. The students were entrusted with the running of the events so far as appeared feasible. The height of the hurdles was modified to 2 ft 6 in which is the requisite height for the 220 yards low Hurdles race.

The outstanding performer of this year was C. C. Gilbert who won most of the prizes.

The Vizianagram cup by the order of the Government was to be awarded from this year onwards to the best Indian Athlete of the Civil Engineer class, 3rd year, who does not win the Lion Trophy. Then question of awarding this cup was unanimously decided by the Sports Committee on a system of marking for the competitors of this particular class. This proposal was accepted by the Principal and the draft rules for its award in future are under preparation.

The standard of tennis continued to be fairly high. The College won three matches out of four in the Olympic.

The students were quite keen on cricket this year. The new classes supplied some promising players and with the e

**Cure** Captain B L Sharma delivered a lecture on Air Raid Precautions, which is a subject of special interest these days. Twenty six papers were read by 14 students on Engineering and subjects of general interest. The standard of some of the papers was very satisfactory and indicated that the speakers had taken pains to read up the subjects. The attendance at the meetings was made compulsory for all these classes.

### BOOK DEPOT

Government Branch Press Book Depot where students can obtain copies of the text books recommended by the College at 12½ per cent off published prices continues to work satisfactorily.

### COLLEGE MANUALS

No revised manual has yet been sent to Press for printing. Revision of Survey Manual Part II has been completed by Mr S R Singh and that of Building Construction is also nearing completion. Irrigation Manual, Parts I and II are being revised by Rai Bahadur M C Bhat and Drawing Manual by Mr P L Sharma.

### LIBRARY

Library lacks many recent books of importance on engineering subjects and also renewal of old and out of date books. More shelves are required to keep the books and this is being looked into.

### BUILDINGS AND GROUNDS

The College Estate has been maintained in as satisfactory a condition as possible. The abnormal rise in prices of various building materials further restricted the quantity of work that could be done. In addition to this the Government cut down the grant from Rs 28 000 to Rs 24 000 last year and

A new gramophone has been added this year

**Common Mess**—The common mess continues to serve as a very useful institution. It has brought about all the advantages of a common table and has increased harmony amongst the students. The membership remained 72 throughout with of course, temporary increase during the Project and Survey Camps. The crockery purchased last year proved to be of a inferior quality and has given way. Ice cream freezers and some glassware and crockery worth Rs 200 were purchased recently but a lot more are still needed. Government has kindly allotted funds for remodelling the dining hall.

### OVERSEER CLASS CLUB

The club continues to serve the useful purpose of a common meeting place for the O S students. A room has been added to the club premises.

The scheme to improve the football and hockey grounds has also been completed. The students still seem to lack interest in athletic sports and boating.

### THE LION MAGAZINE

Only one issue of the magazine came out this year. The Students did not take enough interest in the College magazine. It has been proposed to award prizes for the best articles and cartoons in order to attract more contributions.

### THOMASONIAN SOCIETY

The Thomasonian Society meetings continued to evoke keen interest amongst the students of all classes. Nine meetings were held during the session. Dr R S Agarwal of Delhi delivered lectures on Defective Insight and its

Cure' Captain B L Sharma delivered a lecture on "Air Raid Precautions", which is a subject of special interest these days. Twenty six papers were read by 14 students on Engineering and subjects of general interest. COLLEGE CONVOCATION  
July 13, 1942

Hall G. Lacey Esq, C I E, B SC, M INST C E, Chief Engineer United Provinces Public Works Department, Irrigation Branch very kindly presided. The Principal, Rai Bahadur Madan Gopal Sardana opened the proceedings with the following address

Mr Lacey Ladies and Gentlemen,

On behalf of the College Staff and students I most heartily welcome you as our Convocation President. I realize how trying it is in this part of the season to undertake journey and I also admit the heavy responsibilities of your own work which hardly permits deviation. Yet, that you have been able to find time for us, is evidence of your care and keen interest for the institution. As a Professor of this College before and now as President of the College Advisory Council and Head of the Irrigation Branch, United Provinces, you have in you theory practice and organization personified and no occasion better then this could be suitable to have you amongst us as our President for guidance and trained advice. I again welcome you.

The visitors, official and non official who have joined us today setting aside their comfort and their usual work, have participated, needless to say at a great personal sacrifice. Their visit has encouraged us and I heartily welcome them.

Ever since I joined the College I have been thinking of having an up to date hydraulics laboratory. I fully realize that due to financial stringency this may not be the time for asking for more money but I am glad to report that there are prospects for making a modest beginning and this would form the nucleus for a first class laboratory in better times when funds are available.

Last year I stated in my report that improvements were being made in the syllabus of the Overseer Class. These have now been approved by Government and the revised syllabus has been introduced from this year. There was a great congestion of the subjects of Civil Engineering in the 2<sup>nd</sup> year before. These have now been spread evenly over both the years and good many

of them are now taught in the Ist year Also, the Indian Posts and Telegraphs Department have now agreed to permit our students to sit for the competitive examination for the cadres of Engineering Supervisors and Wireless Operators

The revised syllabus of the Draughtsman Class has also been approved by Government and introduced from this year On further consideration it has been felt that to enable the students to get full benefit of the revised course of study it is necessary to raise the qualifying standard of the candidates for the admission examination This can be done provided their prospects in the departments are also improved A proposal in this connexion is being submitted to Government

The College is doing war work in training B N C Os to work as Sub Divisional Officers in the Military Engineering Services and war Technicians in various trades Two batches of B N C O have already been trained and a third batch of 12 students is now under training They are given intensive training for four months and sent back to the Military Department

The scheme for training war technicians in this College was started in July last with 16 candidates to begin with By November we had over 200 trainees on our rolls In the beginning the training was carried on entirely by our usual staff and this entailed very heavy work on the Mechanical and Electrical Department There was some relief when Mr Rogers Instructor from the United Kingdom joined us on 13th December 1941 and Mr Hotchkiss on 16th March 1942 We are now carrying on training in different trades and very soon we shall also be training Moulders and Surveyors The present strength is nearly 370 and our full quota has been recently increased to 600 So far we have sent out 200 trained technicians to the Army and very soon another batch of nearly 100 trained men will be leaving us

We have also been helping the various departments who wanted survey instruments for war purposes So far we have lent 15 theodolites and 14 levels

of them are now taught in the 1st year. Also, the Indian Posts and Telegraphs Department have now agreed to permit our students to sit for the competitive examination for the cadres of Engineering Supervisors and Wireless Operators.

The revised syllabus of the Draughtsman Class has also been approved by Government and introduced from this year. On further consideration it has been felt that to enable the students to get full benefit of the revised course of study it is necessary to raise the qualifying standard of the candidates for the admission examination. This can be done provided their prospects in the departments are also improved. A proposal in this connection is being submitted to Government.

The College is doing war work in training B N C Os to work as Sub Divisional Officers in the Military Engineering Services and war Technicians in various trades. The scheme for training war technicians in this College was started in July last with 16 candidates to begin with. By November we had over 200 trainees on our rolls. In the beginning the training was carried on entirely by our usual staff and this entailed very heavy work on the Mechanical and Electrical Department. There was some relief when Mr Rogers, Instructor from the United Kingdom joined us on 13th December 1941 and Mr Hotchkiss on 16th March, 1942. We are now carrying on training in different trades and very soon we shall also be training Moulders and Surveyors. The present strength is nearly 370 and our full quota has been recently increased to 650. So far we have sent out 200 trained technicians to the Army and very soon another batch of nearly 100 trained men will be leaving us.

We have also been helping the various department who wanted survey instruments for war purposes. So far we have lent 15 theodolites and 14 levels.

THOMSON COLLEGE OLD BOYS ASSOCIATION

First Annual General Meeting held on 18th Dec 1914

The Old Boys' Association about which I mentioned in my last report has since been formed and its membership is steadily increasing. Already 63 members have joined it.

The College has again done very well and maintained its reputation in the competitive examination of the Indian Railway Service of Engineers and Central Public Works Department. Five out of thirteen candidates selected are the passed students of this College.

The students continue taking a keen interest in all sports and games as usual and their health has been very good throughout the year. The C. I. Mess is retaining its popularity and the number of members was 72 throughout the year. The present dining hall is inconvenient and this was noticed by the Director of Public Instruction last year. I am glad to say that he has now allotted funds for enlarging it. This work will be carried out during the vacation and this would fulfil a long-felt need of the College. The discipline of the students has been good on the whole.

There have been several changes in the staff during the year. On the transfer of the services of Lt Col Crawford to the Defence Department Mr B. L. Sharma was promoted as Assistant Professor of Mechanical and Electrical Engineering and to fill the vacancy caused, Mr Jagdamba Prasad was appointed as Lecturer in Mechanical Engineering. He joined the College on 9th January 1942. As the staff for teaching Civil Engineering was short, Government has kindly sanctioned a Lecturer in Civil Engineering. Mr Jai Krishna who was working as Personal Assistant to Principal, was appointed to this post and took up his duties on 16th December, 1941. Mr Kashi Saran Mehta was appointed as Personal Assistant in his place and joined us on 19th January, 1942. Mr P. L. Sharma, Lecturer in Drawing unfortunately met a car accident and had to remain on leave from 8th December 1941 to 10th June 1942. Mr Shri Kant Gupta who joined the College on 21st January 1942 officiated for him till 3rd June, 1942. We welcome Messrs Jagdamba

The Old Boys Association about which I mentioned in my last report has since been formed and its membership is steadily increasing. Already 65 members have joined it.

The College has again done very well and maintained its reputation in the competitive examination of the Indian Railway Service of Engineers and Central Public Works Department. Four out of thirteen candidates selected are the passed students of this College.

The students continue taking a keen interest in all sports and games as usual and their health has been very good throughout the year. The C. L. Mess is retaining its popularity and the number of members was 72 throughout the year. The present dining hall is inconvenient and this was noticed by the Director of Public Instruction last year. I am glad to say that he has now allotted funds for enlarging it. This work will be carried out during the vacation and this would fulfil a long felt need of the College. The discipline of the students has been good on the whole.

There have been several changes in the staff during the year. On the transfer of the services of Lt Col Crawford to the Defence Department, Mr B. L. Sharma was promoted as Assistant Professor of Mechanical and Electrical Engineering and to fill the vacancy caused, Mr Jagdamba Prasad was appointed as Lecturer in Mechanical Engineering. He joined the College on 9th January, 1942. As the staff for teaching Civil Engineering was short, Government has kindly sanctioned a Lecturer in Civil Engineering. Mr Jai Krishna who was working as Personal Assistant to Principal, was appointed to this post and took up his duties on 16th December, 1941. Mr Kashi Saran Mehta was appointed as Personal Assistant in his place and joined us on 19th January, 1942. Mr P. L. Sharma, Lecturer in Drawing unfortunately met a car accident and had to remain on leave from 8th December, 1941 to 10th June, 1942. Mr Shri Kant Gupta who joined the College on 24th January, 1942 officiated for him till 3rd June, 1942. We welcome Messrs Jagdamba

Prasad and Kashi Saran Misra and hope they will do their utmost to give their best to the College and maintain its high reputation

I now with your permission Sir review the work of the last year

The Council of India Prize of Rs 1 000 awarded to the best student of the Civil Engineering class passing out has been won by Mr Prem Manohar B.Sc. He has obtained 80 per cent marks and has also secured the following prizes

- 1 Crutley Memorial Gold Medal for Mathematics Group II
- 2 Calcott Reilly Memorial Gold Medal for Applied Mechanics
- 3 General MacLagan Prize of books for Electrical Engineering and Physics
- 4 Silver Medals for Civil Engineering (Theoretical) and Laboratory Practice Group IV (Practical)

The Thomason Prize of Rs 250 which is awarded to the second best student has been carried off by Mr Indra Kumar Gupta B.Sc. who has obtained 78 per cent marks

The Rai Bahadur Hanbhaya Lal Gold Medal for the third best student goes to Mr Arit Kumar Chakravarti B.Sc. who has also won Sushla and J. Mitra Memorial Silver Medal for Highest Marks in Chemistry. Mr C. C. Gilbert has been awarded the passing out scholarship of Rs 250 for the senior European or Anglo Indian student passing out of the College

All of them deserve our hearty congratulations

The best award of the College i.e. the Thomason Memorial Gold Medal for the best engineering designs has been won by Mr Parshottam Saran Agrawala B.Sc. who has obtained 87 per cent marks in the two projects. He has also won silver medal for Surveying. Our heartiest congratulations are due to him for his brilliant achievement. The Major Project this year was

set by Mr W L Walker I.S.R., Superintending Engineer Buildings and Roads Department Lucknow. It was for a metalled road from Nagina to Afzalgarh. Due to pressure of work Mr Walker could not examine the project himself. This had to be done by Mr M B Hathill I.S.R. Executive Engineer Buildings and Roads Department Nainital. His remarks on the project are as below:

The designs were very well thought out and the calculations carefully prepared. The detailed drawings were very neat and the plans on the whole excellent. The waterway provided varied from 1100 ft to 1,200 ft. All provided for piers and abutments founded on wells. In all but four cases circular wells were provided. The four exceptions provided twin octagonal wells. With regard to the superstructure everyone provided reinforced concrete T beams. Six students provided T beams continuous over two spans whereas the remainder provided T beams freely supported in each span. Only a few students made provision for expansion and contraction of the T beams at the freely supported ends over the abutments and piers.

We are indebted to Messrs Walker and Hatfield and to Mr Nubut Rai Executive Engineer Northern Division, Ganges Canal, who examined the Overseer Class project for the trouble they took in setting and examining the projects.

In the Civil Engineer class 3rd year all the students have passed except one who had to be expelled for one year as a disciplinary measure. Out of 28 students 11 have obtained Honours Diplomas. The students have again done very well in the final examination, papers for which are set by external examiners. The first student has got 79.1 per cent marks the average marks of the whole class being 58.6 per cent.

In the 1st and 2nd year classes all the students have passed.

In the Overseer 2nd year class all the students except one have passed. He cannot be allowed to repeat the course as he has already been in the class for three years.

Mr. Jagdish Chander Perti stands first in the class, obtaining 70 per cent marks. He has also won silver medal and Rs 100 for general merit, Rai Bahadur Kaubhaya Lal silver medal for the Indian student who stands first in the class and silver medals for Mathematics (Elementary) Applied Mechanics, Descriptive Engineering, Surveying Workshops Groups V and also the Durga Das Dutt Silver Medal for the best Indian student obtaining higher certificate.

In the Overseer 1st year class two out of 50 students have failed. They will be allowed to repeat the course.

The annual sports this year were held on 19th December, 1941. The outstanding performance was of Mr. C. C. Gilbert who won most of the prizes. He was awarded the Leon Trophy for the Individual Championship of the College and also the Bradshaw Smith Challenge Cup for Cross Country race. There was a tie for the Runner up Cup between Mr. G. Siddiqui of Civil Engineer class, 2nd year and Mr. P. C. Sharma of the draughtsman Class. The Barnett Cup for the Overseer Class Championship was won by Mr. Shamim Husain and the Stampe Cup for Inter Class Championship by the Civil Engineer Class, 3rd year.

The Annual Olympic Contest with the Royal Engineers was won by the College for the fifth year in succession, the College winning 3 out of 5 events. The College has, therefore, won the cup 13 times and the Royal Engineers 9 times.

The Annual Regatta was held on 1st June, 1942. Owing to a large decrease in the number of oars and owing to our helplessness in replacing the old oars by new ones, the Double Sculls had to be given up this year. We were thus left with three events instead of four in the Regatta. These were, however, keenly contested, the entries being quite as large as in the previous years and the performance of the competitors was very good.

There are 48 students now in the College U. T. C. Platoon. There is still room for further expansion and as suggested in previous years we can easily put up a

War is the topic of the day. It surrounds us and is affecting our daily life. The brunt of it will be felt most fully by you as you start your career. As mere bread winners your course will be easier to traverse than your predecessors, but *bread winning is not all*. You must have an ideal as food for your aesthetic life. What that ideal should be? In peacetime I should have said that whatever your environments, be upright, truthful and dutiful in everything you do. Now I should say the same thing but as your surroundings are war surroundings I should advise each of you to contribute actively in the successful termination of the war and save the world from further obliteration of men, money and material. You should rid yourself of wishful thinking and facing facts work to your ideal and as you go out, may courage and success attend your cause.

In the end it is with a deep sense of praise and gratitude that I speak of the unqualified co-operation which I received throughout from my entire staff. They have been extremely helpful to me in every way.

With your permission, I now request you, Sir, to address the assembly and give away the prizes."

' Mr. Sardani, Ladies and Gentlemen,

When, a few days ago, I studied the list of those distinguished officers and public servants who have addressed you in the past at Convocation I felt the more honoured that I had been invited to preside today, it is no empty form of speech to say that the fact gives me pleasure, for my contacts with the Thomson College of Civil Engineering extend over more than a quarter of a century and my interest in your College, which may justly claim to be the premier institution of its kind, not only in India, but in the East, is sincere and lasting.

It was during the Great War that I officiated as your professor of Civil Engineering for two years, before being released for military duty with the Sappers, to which corps your College has in the past owed so much, there was an interlude of a dozen years ago when I rejoined your staff for four years and today when another and more devastating war is in progress the Roorkee College claims me, on the eve of my retirement, if only for a day.

For the greater part of my service I have worked with engineers educated at Roorkee as my colleagues and have lived to see my early students earn distinction and elevation to administrative rank. I know from experience their capacity, their industry and devotion to duty. They, and others who have sought employment in a wider field than Government service, have earned a reputation that stands high in the engineering profession and it rests with you students of today, the engineers of tomorrow, each to resolve that he will preserve that reputation, untroubled and unimpaired.

The service which your College renders in the education of civil engineers has in the past somewhat overshadowed its second function of training overseers many of whom find employment in our Subordinate Engineering Services. I remember very well, in my first year of service as an assistant engineer, reflecting, when I had just given an order to an Overseer, that his position was somewhat unfortunate as he had no one to whom he could

## ANNUAL REPORT

train him up but must carry it out himself. Late experience taught me that there was a useful individual known as the overseer's mate who collected the work that the over-er controlled. It is however none the true that the over-er, whenever there is real work, does not find himself in the firing line.

The over-er fell was a calling which is centuries old and which goes back to the West. There is not a well and truly laid in India's finest ancient masonry which is not a memorial to the skill and industry of supervisors, the fathers of our overseers, too. I must mention in that same over-er, to whom I give first place and I place it on record that others emulate his example, that he subsequently served sea in the last war, earned promotion to gazetted and received the distinction of *Rai Sahib*. This is a isolated instance of rewarded merit and the same opportunity may still be seized by the overseers of today. I am glad to note that overseer students can now sit for posts of engineering supervisors and wireless operators and need hardly draw attention to the career now to them in the Military Engineering Service.

I am glad to hear that the College U. T. C. p. has maintained its excellent record, and also the College is playing so great a part in the war effort in training of B. N. C. O's and in particular of war mechanics. I will not deal in greater detail with activities lest inadvertently information were given to the enemy which we all hope they will acquire at other times, and places, in a more salutary way.

I congratulate the College on another excellent record of work and play, and Mr. Sardani on the co-operation he has found in his staff. The College fortunate in possessing as its Principal and old colleague of mine, an engineer of established reputation and of sympathy and understanding.

gaged in a vital Olympic contest with powerful and unscrupulous enemies, and, if we have lost one or two events, that should spur us to redoubled efforts in future. There is also the probability that towards the end, we shall add, without regard to the published programme, events of our own, which we are certain of winning, and which will turn the scale.

I doubt whether there is another engineering College in the world so happily endowed, as the Thomason College in its surroundings. You have glimpses of the eternal snows, not always revealed, but sensed none the less even when obscured, to inspire you with a love of knowledge, of science and of truth, and the monumental works of that great giant among engineers, Sir Proby Cautley, to show the heights to which a man can aspire and succeed. You have a fine tradition handed down from the early days when the College was first founded, a tradition born of discipline and of courage. There was never a time when such qualities were so badly needed. To those two must be added one more, which all great engineers seek in their work, endurance.

If we endure and seek each to the limit of his individual capacity, to do all he can by word and deed to further the war effort, we will prevail. When that victory comes which not all of us may see, the civil engineer will come into his own again and find an immeasurable field in which he can labour for the advancement of an India, at peace with the world—and with herself."

Mr. G. Lacey then gave away the prizes.

I have the honour to be

Sir,

Your most obedient servant

MADAN GOPAL SARDANA,

Principal.

## APPENDIX I
